In the first book of the Global Healing trilogy, Vipin Mehta demonstrates the significance of Metaphysical knowledge and how different mindsets impact individuals, societies, nations and ultimately the state of the world. Vipin Mehta then shows us how to apply metaphysics to change negative constrictive mindsets to positive constructive mindsets by unlocking the inner workings of how the mind really works - essentially demonstrating that our physical outer world is ultimately a

reflection of our inner world.

Details the powerful effects of gems as an alternative therapy for physical, psychological, and spiritual healing • Reveals the physical, healing, and astrological properties of over 70 minerals, along with instructions for maintaining and recharging their powers • Examines the “life” energy of stones, their basic vibratory patterns, and how this energy is used therapeutically to treat various disorders • Shows how to use gems in color therapy and to harmonize the chakras Gemstones have been used for both therapeutic and spiritual purposes since the beginning of time and in all traditions. Used properly, they can contribute to and accelerate

healing through the practice of lithotherapy, which uses gems and minerals to restore enzymatic functions, and they can energize spiritual development. Alternative medicines such as homeopathy have given prominence to the therapeutic character of certain minerals, but the use of gemstones in expanding awareness or establishing a holistic, energetic connection with the stone itself have scarcely been brought forward. In this reclaiming of ancient wisdom, Florence Mégemont explores the many potent and beneficial dimensions of the mineral world. Over 70 precious and semiprecious stones are inventoried as to their principal deposits, therapeutic applications, and zodiac correspondences. Readers will discover

which physical and emotional disorders can be relieved by using which minerals and--with the application of chakra therapy--which gemstones are indispensable to their spiritual health. While not proposing that lithotherapy is a substitute for traditional allopathic treatment, Mégemont shows that it can be a powerful complement to it. Additionally, stones can act preventively, energizing both our health and spiritual resources to a state of balance and attunement.

This book, first published in 1958, examines the life and works of Avicenna,

one of the most provocative figures in the history of thought in the East. It shows him in the right historical perspective, as the product of the impact of Greek thought on Islamic teachings against the background of the Persian Renaissance in the tenth century. His attitude can be of guidance to those in the East who are meeting the challenge of Western civilization; and to those in the West who have yet to find a basis on which to harmonize scientific with spiritual values.

When a mortifying defeat to his teenage son rekindles his lifelong passion for table tennis, keen philosopher Guido Mina di Sospiro sets out to learn the game properly. Guido's love for spinning a feather-weight ball takes him from his local Ping-Pong club, populated by

idiosyncratic players with extraordinary stories to tell, to training drills with a world-class coach. This seemingly harmless game also leads him into sticky situations in the CIA headquarters and the ganglands of Washington, D.C.

Woven throughout his Ping-Pong epiphany are philosophical ruminations on Plato and Aristotle, metaphysicians and empiricists, Jung's dark shadow, Sun Tzu's war tactics, the I Ching, and much more. As Guido's journey takes him from Big Sur to a nail-biting showdown in China against a string of elite players, he finds that Ping-Pong can teach us a surprising amount about life.

The eleventh-century philosopher and

physician Abu Ali ibn Sina (d. A.D. 1037) was known in the West by his Latinized name Avicenna. An analysis of the sources and evolution of Avicenna's metaphysics, this book focuses on the answers he and his predecessors gave to two fundamental pairs of questions: what is the soul and how does it cause the body; and what is God and how does He cause the world? To respond to these challenges, Avicenna invented new concepts and distinctions and reinterpreted old ones. The author concludes that Avicenna's innovations are a turning point in the history of metaphysics. Avicenna's metaphysics is the culmination of a period of synthesis during which philosophers fused together a Neoplatonic project (reconciling Plato with Aristotle) with a

Peripatetic project (reconciling Aristotle with himself). Avicenna also stands at the beginning of a period during which philosophers sought to integrate the Arabic version of the earlier synthesis with Islamic doctrinal theology (kalam). Avicenna's metaphysics significantly influenced European scholastic thought, but it had an even more profound impact on Islamic intellectual history—the philosophical problems and opportunities associated with the Avicennian synthesis continued to be debated up to the end of the nineteenth century.

the world we have awaited for will

Some of the foremost living scholars in
Islamic thought have come together to
create a standard and definitive work on
the subject of Islamic thought. Noted
scholars from North America, Europe,
and the Middle East offer new and
generative interpretations of major
themes in the field. They address

perennial theological and philosophical questions: the nature of the God-head, the ultimate constitution of matter, the world's origin, causality, divine providence and the existence of evil, freedom and determinism, political wisdom, and the reaches of human knowledge. The contributions include historical and analytical expositions of these issues in medieval Islam as well as discussions of individual thinkers, translations of Arabic texts with commentary, comparisons of Greek and Islamic thought, and bibliographical and textual sources. As a whole, these essays offer a wealth of philosophical, theological, bibliographical, philological, and historical information. Among the outstanding contributions are: an article by Charles Butterworth on Aristotle's

rhetoric and how it was understood by al-Farabi, Avicenna and Averroes; Richard M. Frank's essay on the concepts of atoms and bodies, one of the most complex subjects in Islamic theology; and an article by Shams Inati on Ibn Sina and single expressions that discusses how language relates to mental processes and the unknown. Michael E. Marmura develops a new perspective on the subject of efficient causality, emphasizing the paradigmatic position of God's relationship to the world; Muhsin Mahdi analyzes a treatise of Averroes' that deals with the relationship between philosophy and law.

The Philosophy of Mental Healing BRILL
Through close study of Avicenna's statements and major works, Dimitri

Gutas traces Avicenna's own sense of his place in the Aristotelian tradition and the history of philosophy in Islam, and provides an introduction to reading his philosophical works by delineating the approach most consistent with Avicenna's intention and purpose in philosophy. The second edition of this foundational work, which has quickened fruitful research into the philosopher in the last quarter century, is completely revised and updated, and adds a new final chapter summarizing Avicenna's philosophical project. It is also enlarged with the addition of a new appendix which offers a critical inventory of Avicenna's authentic works, updating the work of Mahdavi (1954) with additional information on all manuscripts and important editions and translations. Its

usefulness enhanced, the book provides primary orientation to Avicenna's philosophy and works and constitutes an indispensable research tool for their study.

A Practical Exposition of Natural Restorative Power Cornell University Press

This volume introduces the major classical Arabic philosophers through substantial selections from the key works (many of which appear in translation for the first time here) in each of the fields -- including logic, philosophy of science, natural philosophy, metaphysics, ethics, and politics -- to which they made significant contributions. An extensive Introduction situating the works within their historical, cultural, and philosophical

contexts offers support to students approaching the subject for the first time, as well as to instructors with little or no formal training in Arabic thought. A glossary, select bibliography, and index are also included.

The Complete Reference Guide with Over 200 Remedies for Mind, Heart & Soul Uea Publishing Project (Formerly Egg Box Publ)

Avicenna is the most influential figure in the intellectual history of the Islamic world. This book is the first comprehensive study of his theory of science, which profoundly shaped his philosophical method and indirectly influenced philosophers and theologians not only in the Islamic world but also throughout Christian Europe and the medieval Jewish tradition. A

sophisticated interpreter of Aristotle's Posterior Analytics, Avicenna took on the ambitious task of reorganizing Aristotelian philosophy of science into an applicable model of scientific reasoning, striving to identify conditions of certainty for scientific assertions and conditions of adequacy for real definitions. Riccardo Strobino combines philosophical and textual analysis to explore the scope and nature of Avicenna's contributions to the logic of scientific reasoning in his effort to recalibrate Aristotle's model and overcome some of its internal limitations. Focusing on a broad array of philosophical innovations at the intersection of logic, metaphysics, and epistemology, this book casts light on an essential aspect of the thought of the preeminent philosopher and physician of

the Islamic world.

A Practical Guide to Developing Your Intuition Simon and Schuster Ibn Sina (980-1037), known as Avicenna in Latin, played a considerable role in the development of both Eastern and Western philosophy and science. His contributions to the fields of logic, natural science, psychology, metaphysics, theology, and even medicine were vast. His work was to have a significant impact on Thomas Aquinas, among others, who explicitly and frequently drew upon the ideas of his Muslim predecessor. Avicenna also affected the thinking of the great Islamic theologian al-Ghazali, who asserted that if one could show the incoherence of Avicenna's thought, then one would have demonstrated the incoherence of

philosophy in general. But Avicenna's influence is not confined to the medieval period. His logic, natural philosophy, and metaphysics are still taught in the Islamic world as living philosophy, and many contemporary Catholic and evangelical Christian philosophers continue to encounter his ideas through Aquinas's work. Using a small handful of novel insights, Avicenna not only was able to address a host of issues that had troubled earlier philosophers in both the ancient Hellenistic and medieval Islamic worlds, but also fundamentally changed the direction of philosophy, in the Islamic East as well as in Jewish and Christian milieus. Despite Avicenna's important place in the history of ideas, there has been no single volume that both recognizes the complete range of his

intellectual activity and provides a rigorous analysis of his philosophical thinking. This book fills that need. In Avicenna Jon McGinnis provides a general introduction to the thinker's intellectual system and offers a careful philosophical analysis of major aspects of his work in clear prose that will be accessible to students as well as to specialists in Islamic studies, philosophy, and the history of science.

Thinking Outside the Box Crossing Press

This book offers a new edition, with English translation and commentary, of the Kitāb al-Madḥal, which opens Avicenna's (d. 1037) most comprehensive summa of Peripatetic philosophy, namely the Kitāb al-Šifā'. For the first time, the text is established

together with a stemma codicum showing the genealogical relations among 34 manuscripts, the twelfth-century Latin translation, and the literal quotations by Avicenna's first and second-generation students. In this book, Avicenna's reappraisal of Porphyry's Isagoge is examined from both a historical and a philosophical point of view. The key-features of Avicenna's theory of predicables are analyzed in the General Introduction and in the Commentary both in their own right and against the background of the Greek and Arabic exegetical tradition. Readers shall find in this book the first systematic study of the Madḥal which, in addition to being the only logical work of the Šifā' ever transmitted in its entirety both in Arabic and in Latin, is crucial for

understanding Avicenna's conception of universal predicables at the crossroads between logic and metaphysics.
