"Do you really understand what business value is? Information technology can and should deliver business value. But the Agile literature has paid scant attention to what business value means—and how to know whether or not you are delivering it. This problem becomes ever more critical as you push value

delivery toward autonomous teams and away from requirements "tossed over the wall" by business stakeholders. An empowered team needs to understand its goal! Playful and thought-provoking, *The Art of Business Value* explores what business value means, why it matters, and how it should affect your software development and delivery practices. More than any other IT delivery approach, DevOps (and Agile thinking in general) makes business value a central concern. This book examines the role of business value in software and makes a compelling case for why a clear understanding of business value will change the way you deliver software. This book will make you think deeply about not only what it means to deliver value but also the relationship of the IT organization to the rest of the enterprise. It will give you the language to discuss value with the business, methods to cut through bureaucracy and strategies for incorporating Agile teams and culture into the enterprise. Most of all, this book will startle you into new ways of thinking about the cutting-edge of Agile practice and where it may lead."

 Seminar paper from the year 2004 in the subject Business economics - Investment and Finance, grade: 85%, Stellenbosch University, 21 entries in the bibliography, language: English, abstract: The financing strategy is the mix of capital chosen by each enterprise. This strategy is of extreme importance, because it can have a profound effect on the value of the enterprise. In general, firms have different possibilities to design its capital structure. Debt can be issued in a large quantity or only in a small amount. Furthermore, warrants, convertible bonds, caps, callers or preferred stock can be issued. Firms can use lease financing, bond swaps or forward contracts. The variations in capital structures are infinite, due to the endless number of financing instruments. Variables such as demand and supply, the capital requirement, the price of capital (interest rates), types of security, etc. are given at a particular point in time. We will discuss how a firm should finance in order to establish an optimal combination of equity and debt capital in the interests of the welfare of the owners. Uncertainty and risk are central to the financing problem

and therefore financing must in essence be dynamic by nature. The single most important basis for making any financial decision is prognosis. The techniques used are mainly those of budgets and analysis by means of ratios. Prognosis, income expectations and developments in the money and capital markets, play a central role as the single most important basis of each financing decision. The optimal combinations of equity capital and debt to maximise the interest of the owners, are achieved by means of the sensible use of debt. The question thus arises to what extent this approach can be utilised and therefore the determining factors of the financial structure must be considered in more detail. This paper will focus on these factors. It will not discuss sources of financing in detail, which should be treated as a separate topic.

It demystifies mission impact and financial viability using The Matrix Map to provide strategic options for any organization. A must-read for every nonprofit CEO, CFO, and board member." —Julia A. McClendon, chief executive officer, YWCA Elgin, Illinois "This book should stay within easy reaching distance and end up completely dog-eared because it walks the reader through a practical but sometimes revelatory process of choosing the right mix of programs for mission impact and financial sustainability. Its use is a practice in which every nonprofit should engage its board once a year." —Ruth McCambridge, editor in chief, The Nonprofit Quarterly "Up until a few years ago, funding and managing a nonprofit was a bit like undertaking an ocean voyage. Innovative executive directors or bold board members who want their organization to be able to ride the big waves of the new American economy must read this book." —Robert L. E. Developing country governments and the development aid community are acutely aware of the need to find more effective ways to improve basic living conditions for the poor, as traditional approaches of delivering public support have not always led to the results intended. Results-based financing (RBF) instruments, which tie the disbursement of public funding to the achievement of pre-agreed results, are now recognized as one important piece of the aid delivery puzzle. The aim of these instruments is to enhance the effectiveness of public funding. 'Output-Based Aid: Lessons Learned and Best Practices' provides a practical understanding of the experience with output-based aid (OBA), a results-based instrument that is being used to deliver basic infrastructure and social services to the poor, including through public-private partnerships. OBA has been used in the World Bank Group since 2002, including more recently through the Global Partnership on Output-Based Aid, which has a mandate to design and test OBA approaches. The authors of this book analyze nearly 200 OBA projects in water and sanitation, energy, health, roads, telecommunications, and education. The piloting phase of OBA has in general been a success and OBA has demonstrated clear advantages over traditional approaches in terms of efficiently targeting subsidies and mobilizing the private sector to serve poor households that would otherwise go without an improved service. OBA has also demonstrated that monitoring for results is possible

if appropriate systems are put in place. As the first comprehensive review of OBA in eight years, this book will be an essential reference for infrastructure and social services sector experts and OBA practitioners around the world including staff of international financial institutions, public and private service providers, and NGOs as well as for donors and governments who are interested in piloting or scaling up and mainstreaming OBA approaches. As the first comprehensive review of OBA in eight years, this book will be an essential reference for infrastructure and social services sector experts and OBA practitioners around the world, including staff of international financial institutions, public and private service providers, and NGOs; and for donors and governments who are interested in piloting or scaling-up and mainstreaming OBA approaches.

In developing and transition economies, 60 to 80 percent of all passenger and freight transport moves by road-the main form of access for most rural communities. Yet most of the 11 million kilometers of roads in these economies are badly maintained and poorly managed. This paper discusses one of the most effective ways to promote sound policies for managing and financing road networks--commercialization. It discusses the emerging central concept of bringing roads into the marketplace, putting them on a fee-for-service basis, and managing them like a business.
