Chilton's Commercial Carrier Journal for Professional Fleet Managers Routledge

Statistical analysis is essential to business decision-making and management, but the underlying theory of data collection, organization and analysis is one of the most challenging topics for business students and practitioners. This user-friendly text and CD-ROM package will help you to develop strong skills in presenting and interpreting statistical information in a business or management environment. Based entirely on using Microsoft Excel rather than more complicated applications, it includes a clear guide to using Excel with the key functions employed in the book, a glossary of terms and equations, plus a section specifically for those readers who feel rusty in basic maths. Each chapter has worked examples and explanations to illustrate the use of statistics in real life scenarios, with databases for the worked examples, cases and answers on the accompanying CD-ROM.

Routledge

The immense, global transportation and logistics sector is vital to businesses of all types. This carefully-researched book covers exciting trends in supply chain and logistics management, transportation, just in time delivery, warehousing, distribution, intermodal shipment systems, logistics services, purchasing and advanced technologies such as RFID. This reference tool includes thorough market analysis as well as our highly respected trends analysis. You'll find a complete overview, industry analysis and market research report in one superb, value-priced package. It contains thousands of contacts for business and industry leaders, industry associations, Internet sites and other resources. This book also includes statistical tables, an industry glossary and thorough indexes. The corporate profiles section of the book includes our proprietary, in-depth profiles of the 500 leading companies in all facets of the transportation and logistics industry. Here you'll find complete profiles of the hot companies that are making news today, the largest, most successful corporations in the business. Purchasers of either the book or PDF version can receive a free copy of the company profiles database on CD-ROM, enabling key word search and export of key information, addresses, phone numbers and executive names with titles for every company profiled.

Electric Vehicles Springer

This book summarizes the "interim result" of the servitization activities in manufacturing industries. While the early literature on servitization tended to stress only its advantages, more recently, scholars have also started to refer to the challenges associated with servitization. This book attempts to give a balanced picture of servitization. The book is structured in four parts: Part I introduces the topic by presenting the most recent academic discussion about servitization and uses an empirical analysis to show the degree of servitization across Europe. The results of this analysis are then compared to the discussion in the literature. This comparison highlights the existing discrepancies between the rather euphoric literature and the more skeptical practical experience. The second and third parts attempt to explain these discrepancies by taking as a starting point the assumption that servitization recommendations have to consider the heterogeneity of the manufacturing sector and the capabilities of the provider. Part II presents articles which analyze the specific characteristics of different sectors with their barriers and potentials and presents frameworks for a successful servitization of the core sectors in European manufacturing industries which include, e.g. aeronautics, automotive, ICT, chemical industries, pulp and paper industries and different engineering sectors. Part III focuses on companies' capabilities which are necessary for successful servitization. These include strategic management, marketing, organization, innovation, engineering, human resources, controlling, quality and networks. All the contributions in parts II and III add up to a detailed picture of servitization for sectors and functions and indicate the practical implications for enterprises in manufacturing industries. The fourth part concludes the book with a chapter summarizing the findings and giving an outlook of servitization in manufacturing industries, its challenges and future developments.

Operation & Maintenance John Wiley & Sons

International Business: An Asia Pacific Perspective (Second Edition) provides a unique exploration of the topic of international business. It examines decisions relevant to managers in internationalizing and multinational firms operating in the Asia Pacific region. Its uniqueness stems from the cutting-edge conceptual material that underlies the decision-making

frameworks in the text and in the numerous Asian company examples and illustrations. Users of this text examine such essential topics as the measurement and analysis of the cultural, political and economic dimensions of the international environment; the formation of internationalization strategies, including entry mode choice and strategic alliances; the analysis of the competitive implications of multinational firms and business groups; multinational, subsidiary and expatriate management; and the management of ethical issues.

Trucking News RainbowSA

This book presents a panorama about the recent progress of industrial mathematics from the point of view of both industrial and researchers. The chapters correspond to a selection of the contributions presented in the "Industry Day" and in the Minisymposium "EU - MATHS - IN: Success Stories of Applications of Mathematics to Industry" organized in the framework of the International Conference ICIAM 2019 held in Valencia (Spain) on July 15-19, 2019. In the Industry Day, included for the first time in this series of Conferences, representatives of companies from different countries and several sectors presented their view about the benefits regarding the usage of mathematical tools and/or collaboration with mathematicians. The contributions of this special session were addressed to industry people.

Minisymposium contributions detailed some collaborations between mathematicians and industrialists that led to real benefits in several European companies. All the speakers were affiliated in some of the European National Networks that constitute the European Service Network of Mathematics for Industry and Innovation (EU-MATHS-IN).

1964-72 Progress in Industrial Mathematics: Success Stories The Industry and the Academia Points of View

This book fills an important underserved niche in the strategy arena. Written by expert researchers on Asian business, it presents a broad selection of cases addressing a range of current and important issues in business strategy. The cases have been carefully chosen to represent all the different dimensions of diversity within Asia: geographic (countries), industries, and firm types. More than half of them are either new to or revised for this edition. The cases present an array of large and small firms, high-technology and new-economy firms, and those in emerging as well as mature industries, achieving success and suffering failure in a variety of business environments.

The development of the truck in the U.S. from 1895 to 1978 is examined year by year and brief biographies of important early innovators are included

Who Owns Whom Plunkett Research, Ltd.

This book intends to present and discuss the main challenges that companies interested in servitization strategies have to overcome, with a particular focus on the design of managerial control systems. The book can represent a useful tool for companies interested developing successful servitization strategies.

An Asia Pacific Perspective Kogan Page Publishers

Transport systems have to meet the mobility needs of people and commodities on all scales, from the local to the global level.

Concerns about the energy, fumes and sound emissions produced, and about the safety, service quality, intelligence and lifecycle of the systems, etc. can all be included in a systemic approach. This approach can contribute to the development of sustainable solutions, for individual vehicles as well as for transport systems. Derived from an approach combining the social and physical sciences, these solutions result from the

integration of physical objects, services and organizational processes, which involve several actors. Their harmonious organization contributes to the development of more virtuous transport systems for the future of urban and inter-urban mobility.
