A common goal of human and veterinary medicine is to prevent and cure disease. To reach this goal, there must be a greater

investment in the pathophysiology of diseases. Simply put, reductionist methodology fails to answer all of the questions. Pathophysiology represents a new approach to understanding the nature of disease processes, an approach already being embraced in human medicine. By integrating the basic sciences with pathology and the clinical sciences, Veterinary Pathophysiology bridges a significant and widening gulf in the veterinary professional curriculum. The aim of this trailblazing text is to be scholarly—yet practical—with a focus on the recognition and prevention of early

dysfunction. In contrast to modern clinical veterinary medicine, which has focused progressively on the prescription of medications for individual symptoms and signs of disease, this text gives attention to understanding the functional changes that accompany disease. To offset over reliance on pharmacotherapy, Veterinary Pathophysiology offers insight into the interaction of the functional components of the mammalian body and their reaction not only to disease, but also to the risk of imbalances introduced by dietary and therapeutic manipulation. Veterinary Pathophysiology will supplement existing

textbooks in general or introductory pathology, and veterinary internal medicine, by introducing a new framework for thinking about the nature of disease. The integrated problem-based approach of this book addresses the changing needs of veterinary college curricula, and will be a key resource book for problem-based approaches to learning. Veterinary Pathophysiology is an invaluable text for the practicing veterinarian, as well as veterinary students and instructors in general pathology, pathogenic microbiology, parasitology and immunology, physiology, neurobiology, oncology, toxicology, and pharmacology.

This unique text offers students and clinicians the most comprehensive introduction to understanding the interactions between organs and functional systems that underlie infectious and metabolic diseases. With chapter contributions from 25 international authors, this title is the definitive text and reference in veterinary pathophysiology. It belongs on the desk of every veterinary student, and in the library of every instructor or clinician interested in a deeper understanding of animal diseases. Elsevier Health Sciences

The problem-oriented approach (POA) is the method recommended by the College of Internal Medicine to address and resolve medical questions and problems. Hence the idea of creating a book based on algorithms dealing with the main clinical and laboratory canine and feline clinical abnormalities, using an innovative perspective. Each one of the 85 algorithms guides the reader step-by-step with logical, practical, cost-effective options to proceed from a general concern, laboratory

abnormality, or imaging finding to a specific diagnosis or treatment. A concise summary is provided on the first page of each topic, the algorithm follows, and then succinct explanations are provided for many of the recommended steps within each algorithm. In this book, two useful and innovative aspects were included: color codes and links for additional information within the algorithm. Yellow indicates the diagnostic path, red the diagnosis and blue the therapy; this allows the veterinarian to be guided through the diagnostic labyrinth in order to reach the most appropriate therapy. Inside the red boxes, the list of differential diagnoses

for each problem can quickly be identified. By following the yellow boxes one can understand how to reach these diagnoses, and optimize the diagnostic protocol. Moreover, comprehensive notes, linked to the algorithms by references, give more details regarding a specific diagnostic investigation, a particular disease or the therapy recommended. *Pathologic Basis of Veterinary Disease - Inkling E-Book* Saunders Updated and expanded, the new 6th edition of this popular text remains the only encyclopedic resource for veterinary internal medical problems!
