provides students of computer science and engineering with the skills they will need to design and maintain software for distributed applications. It will also be invaluable to software engineers and systems designers wishing to understand new and future developments in the field. Distributed Systems: Concepts and Design: Coulouris ... Today's applications are marvels of distributed systems development. Each function or service that makes up an application may be executing on a different system, based upon a different system architecture, that is housed in a different geographical location, and written in a different computer language. Components of today's applications might be hosted on a powerful system carried in the owner's pocket and communicating with application components or services that are replicated in ...
