SHARP HUERTA

Yucatan Deep Simon Pridmore
Maverick, innovator, entrepreneur,
environmentalist and sheer force of
nature, Francis Toribiong would have
been a unique and significant individual
no matter where in the world he was
born. As it turned out, he was born in the
island nation of Palau in the Western
Pacific at just the right time to apply his
special set of skills and attributes to the
task of helping his country find its place

in the world. In the 1980s and 1990s, he
arguably did more than anyone to build
Palau's economy and help it develop into
an independent, forward-looking nation.
And, improbably, he achieved this via
the sport of scuba diving. Francis
Toribiong is a Pacific Islander like no
other. He is the father of Palau tourism,
a scuba diving pioneer, and an effective,
tireless ambassador for both his country
and its abundant marine and land
resources. He was born poor and had no
academic leanings. Yet he was driven to
succeed by a combination of duty, faith,
a deep-seated determination to do the

right thing and an absolute refusal ever to compromise his values. For his whole life, he has been a devoted friend to strangers and an implacable opponent to anybody who, through malevolence or negligence, threatens Palau's considerable natural treasures. He has also been the perfect host to generations of scuba divers from all over the world, who have visited Palau to see those treasures for themselves. And, as well as all that, he was Palau's first ever parachutist – known throughout the islands as the Palauan who fell from the sky. They were speaking both literally and figuratively. He was so completely different from all of his contemporaries in terms of his demeanor, his ambitions and his vision, that it was as if he had come from outer space. Palau had never

seen anybody quite like him and there was no historical precedent for what Francis Toribiong did. He had no operations manual to consult and no examples to follow. He wrote his own life. Francis Toribiong was the first Palauan ever to seek and seize the international narrative. No Palauan, in any context or field, had previously thought to go out into the world and say: "This is Palau – what we have is wonderful. Come and see!" This is his astonishing story.

Real-World SCUBA Accidents and How to Avoid Them Human Kinetics Publishers Adventure writing at its best, *Submerged* is the first book on the remarkable story of America's elite underwater archeology team. Daniel Lenihan recounts experiences from his 25 years as

founder and head of the award-winning Submerged Cultural Resources Unit (SCRU) team of the U.S. National Park Service, world-class divers - talented archeologists, historians, and photographers charged with the mission of surveying, mapping, investigating, and protecting shipwrecks and sites that constitute America's sunken heritage. In *Submerged*, Lenihan takes the reader on a kaleidoscope of the team's underwater experiences from 1975 to the present - from Florida caves to ancient ruins covered by reservoirs in the desert southwest; to a WWII Japanese submarine off the Alaskan coast; to the lower rings of hell to retrieve the bodies of drowned divers; to gripping accounts of personal survival in underwater caves, ships, and submerged

buildings. Displaying a passion for extreme diving combined with disciplined professionalism as park ranger-archeologists, the SCRU team tackles astonishing, often harrowing assignments, including; The Isle Royale shipwrecks; Surveying ten large ships sunk from the mid-19th to mid-20th centuries in the middle of the frigid and deep Lake Superior. The USS Arizona in Pearl Harbor; Executing the largest mapping project ever conducted underwater, and his personal impressions as the first deep diver to explore and video the entire ship in 1983. Excavating the hull of the HL Hunley, the first submarine in history to sink an enemy ship, in Charleston Harbor during the Civil War. Resurveying of the ships sunk by atomic bombs at Bikini Atoll,

including the aircraft carrier USS Saratoga and Japanese battleship Nagato. With an aggressive preservation ethic, the team discovers and documents shipwrecks from Florida to Alaska, and even studies the haunts of pirates and prehistoric cultures in Micronesia. This engaging book, written with a mixture of wonder, intensity, pathos and humor, records for the first time the historic and social significance of the underwater research programs conducted by this fascinating unit of the U.S. National Park Service. Sure to delight anyone interested in diving, archeology, American history, adventure, and rescue missions, this fast-paced volume brings an entirely new perspective to the marvels of America's underwater treasures.

The Essentials of Deeper Sport Diving

The NAUI Textbook Scuba Diving, 5E

Heat flow estimates at two sites on the U.S. Atlantic continental margin are presented. An estimate of the heat flowing from the basement also has been obtained. About 4.8 km of sediments penetrated at the COST B-2 and 4.0 km at the COST B-3 were deposited since the Upper Jurassic. Well logs were used to evaluate thermal gradients and sedimentation rates, whereas thermal conductivities and radiogenic heat productions were measured on drill cuttings samples. A procedure to estimate in-situ thermal conductivity from drill cuttings and well logs is described. A substantial set of samples, in the form of drill cuttings, were sorted in four major lithologies:

sandstones, siltstones, shales and limestones. Laboratory measurements of density, porosity, thermal conductivity, quartz (%), potassium (%), uranium (ppm) and thorium (ppm) were performed on 128 reorganized and pulverized samples. A significant correlation of the matrix thermal conductivity to quartz and potassium content was found. In situ porosity and volume fraction of each lithology, determined mainly from well logs, were used to calculate in situ mean thermal conductivity. Finally the mean in situ vertical component of the thermal conductivity, as required for heat flow values, has been estimated from a correction factor for the anisotropy of each lithology. The in-situ temperature and anisotropy effects substantially

decrease estimates of thermal conductivity at depth. Below the uppermost 1 km in both wells the best estimate of the thermal gradient is $26.3^{\circ}\text{C km}^{-1}$ at COST B-2 and $26.1^{\circ}\text{C km}^{-1}$ at COST B-3, whereas in situ mean thermal conductivities range between about 1.8 and $1.9 \text{ W m}^{-1} \text{ K}^{-1}$ (4.3-4.5 T.C.U.). The average heat flow is estimated as about 45 mWm^{-2} (1.07 H.F.U.) at COST B-2 and 44 mWm^{-2} (1.06 H.F.U.) at COST B-3, with an uncertainty of about 20-25%. The mean radiogenic production in sediments at the two sites has been estimated as 1.83 (COST B-2) and 1.44 (COST B-3) 10^{-6} Wm^{-3} . With a 12-14 km thick sedimentary sequence a radioactive contribution of 20-25 mWm^{-2} can be expected. The effects of sediment

deposition, compaction, pore water advection and radiogenic heat production have been combined in a numerical model (Hutchison, 1985) to estimate the undisturbed basement heat flux. Although the sedimentation depresses the basement heat flux by 15-20%, this effect is more than compensated by radioactive heat production in the sediments, so that the surface flux is estimated to be higher than that from the basement. The latter is calculated at about 33-39 mWm⁻² (0.8-0.9 H.F.U.), a relatively low value. The overall uncertainty is about \pm 20-25%, and other estimates on continental margins with thick sediments (e.g. Reiter and Jessop, 1985) probably have at least a similar uncertainty.

A Practical Guide for the Research Diver New World Publications
Incorporated

“Superbly written and action-packed, The Last Dive ranks with such adventure classics as The Perfect Storm and Into Thin Air.”—Tampa Tribune Spurred on by a fatal combination of obsession and ambition, Chris and Chrisy Rouse, an experienced father-son scuba diving team, hoped to achieve wide-spread recognition for their outstanding and controversial diving skills by solving the secrets of a mysterious, undocumented, World War II German U-boat that lay only a half day’s mission from New York Harbor. The Rouses found the ultimate

cost of chasing their personal challenge: death from what divers dread the most—decompression sickness, or “the bends.” In this gripping recounting of their tragedy, author Bernie Chowdhury, himself an expert diver, explores the thrill-seeking, high-risk world of deep sea diving, its legendary figures, most celebrated triumphs, and notorious tragedies.

The Diver who Fell from the Sky

Sandsmedia via PublishDrive

Physiological and practical considerations of scuba diving in easy-to-read format.

NAUI News Harper Collins

One diver, after a seemingly brief period below the surface, discovers that his gas supply has run perilously low. Another, paralyzed, bobs helplessly on the

surface, and when a poorly trained divemaster attempts rescue, things go from bad to worse. Two other divers, fascinated by the bountiful undersea life of the Caribbean, fail to notice that a powerful current is sweeping them rapidly away from their unattended boat. These are just a few of the true stories you’ll find in *Diver Down*, most of them involving diver error and resulting in serious injury or death. Each of these tales is accompanied by an in-depth analysis of what went wrong and how you can recognize, avoid, and respond to similar underwater calamities. This unique survival guide explores the gamut of diving situations, including cave and wreck diving, deep-water dives, river and drift diving, decompression sickness, and much

more. It shows you how to prevent tragic mishaps through: Inspection and maintenance of primary and secondary diving gear Learning and following established safety protocols Confirming the training and credentials of diving professionals Practicing emergency responses under real-world conditions

Hiding on the Bottom Routledge

A journalist's obsession brings her to a remote island off the California coast, home to the world's most mysterious and fearsome predators--and the strange band of surfer-scientists who follow them Susan Casey was in her living room when she first saw the great white sharks of the Farallon Islands, their dark fins swirling around a small motorboat in a documentary. These sharks were the alphas among alphas,

some longer than twenty feet, and there were too many to count; even more incredible, this congregation was taking place just twenty-seven miles off the coast of San Francisco. In a matter of months, Casey was being hoisted out of the early-winter swells on a crane, up a cliff face to the barren surface of Southeast Farallon Island--dubbed by sailors in the 1850s the "devil's teeth." There she joined Scot Anderson and Peter Pyle, the two biologists who bunk down during shark season each fall in the island's one habitable building, a haunted, 135-year-old house spackled with lichen and gull guano. Two days later, she got her first glimpse of the famous, terrifying jaws up close and she was instantly hooked; her fascination soon yielded to obsession--and an

invitation to return for a full season. But as Casey readied herself for the eight-week stint, she had no way of preparing for what she would find among the dangerous, forgotten islands that have banished every campaign for civilization in the past two hundred years. The Devil's Teeth is a vivid dispatch from an otherworldly outpost, a story of crossing the boundary between society and an untamed place where humans are neither wanted nor needed.

The Devil's Teeth Human Kinetics SUPERANNO Packed with full-color photographs and illustrations, Scuba Diving offers step-by-step instruction on preparing for and managing a dive safely with information on the latest equipment, gear selection, recommended dive locations,

technologies and techniques. Dennis Graver explains the basics of diving, including managing underwater emergencies, avoiding underwater hazards and equalizing pressure in the ears, sinuses and mask. The comprehensive content and world class photography of Scuba Diving make it the finest scuba title on the market! Original.

What Lies at the Bottom of Cenote X? Cenote X. The Mayans called it K'uxulch'en, the "Well of Sorrows." Since the days of the Conquistadors, its exact location was known only to local forest tribes—until its discovery by Mike Bryant and Pete Wiley, cofounders of the Yucatan Deep Project. When their joint attempt to set a deep-diving record four

years ago met with disaster, the Well of Sorrows lived up to its name. Now, Mike is returning to the world's deepest sinkhole to finish what he and his late partner began. Not everyone wants Mike to make the attempt. Bridget Marceau—Mike's team physician, fellow diver, and soul mate—fears losing the man she loves to the same cave that claimed Pete Wiley. She is determined to keep Mike out of Cenote X. And she's not the only one. Someone else is keenly interested in what lies more than 1,300 feet beneath the surface. That person already knows exactly what to look for—and why he must at all costs prevent Mike from discovering the secret hidden in those lightless depths. Punctuating high-risk adventure with inside glimpses into the world of

technical diving, author Tom Morrissey plumbs the depths of the human soul. Yucatan Deep is a taut tale of loyalty, greed, and the wellsprings of faith and life.

The NAUI Textbook Aqua Quest
Publications, Inc.

Diving, scientific diving, and diver safety are specialized subject areas not generally well-represented in even the largest of academic libraries, largely because of difficulties in locating appropriate items to include in the collection. However, in order to adequately fulfill his/her responsibilities, the Diving Safety Officer of a scientific diving program needs easy access to a broad range of books, reports, and journals covering all aspects of diving. This bibliography outlines a

comprehensive collection appropriate to the needs of a scientific diving program in a research or academic institution. Items are grouped in broad subject areas corresponding to various aspects of the diving program. Both title and author indexes are also included.

Scuba Diving Safety Aqua Quest Publications, Inc.

An illustrated journey into the world of undersea diving captures humankind's fascination with the wonders of the undersea world and the dramatic growth of recreational sport diving, discussing the history of the sport and offering fascinating accounts of the author's own adventures around the world. The beautiful locales, exotic plant and sea life, and relaxing environs of dive locations are even more peaceful when you are armed with the expertise and skill to stay safe in any situation. With self-rescues, buddy rescues, open-water resuscitation, and towing techniques, Scuba Diving Safety will become your most valuable diving companion. Covering a full range of underwater environments, as well as dangerous marine life, entanglements, and equipment failures, this vital resource is an essential reference for every underwater enthusiast. Do not rely on someone else--or chance--to keep you safe. Let Scuba Diving Safety help you prepare for the unexpected and provide

the confidence to enjoy your underwater adventures to the fullest.

NAUI Technical Diver McGraw Hill Professional

This newly updated and revised second edition of John Heine's Scientific Diving Techniques covers the details of research methods underwater. Included are an overview of aquatic habits and ecosystems, specialized diving equipment and procedures, underwater experimentation and underwater photography and videography for the scientist.

Deep Diving Marcor Pub

This volume offers new insight into an important and largely under-examined area of marine leisure and tourism: scuba diving tourism. Knowledge of scuba diving has long been hidden

among broad discussions of water-based sports and activities and this focused book aims to shed further understanding and knowledge on this popular international activity. The book examines the current issues central to research into and management of scuba diving Tourism from multidisciplinary perspectives such as health and safety, climate change, policy and regulation and the recreation/leisure context. It further reveals critical management issues of economic, environmental and socio-cultural impacts related to scuba diving tourism which extends to the influence of climate change on the industry's operations and future. This significant volume which conceptualizes the issues surrounding scuba diving tourism now and in the future is written

by leading experts in this field and will be valuable reading for all those interested in marine leisure and tourism.

Who's who in Scuba Diving Jones & Bartlett Learning

Scuba Confidential is a unique book packed full of valuable tips and expert advice, giving you unprecedented access to the secrets of dive professionals and technical divers. With Scuba Confidential, you will learn how to master skills and techniques that will make you a more confident, capable and safe diver. It offers an informed, balanced view on some of scuba diving's most contentious issues like going solo, deep diving and rebreathers and includes a comprehensive analysis of how diving accidents happen and how to make sure you do not become a

statistic. Scuba Confidential also gives you valuable insights on a vast range of topics such as what it is like to do a cave diving course, how to make sure you buy the right equipment, what to consider when choosing an instructor, things even the pros get wrong and where to find the best diving in the world. This is candid, no-nonsense practical advice from a professional who has been involved over the last three decades with virtually every aspect of the sport. Have you ever wondered? How to look as comfortable in the water as the professionals do? What it is like to dive inside shipwrecks? Which training courses are most worthwhile? If you would make a good technical diver? If you should be considering a rebreather? How you can improve your diving skills? How you can reduce your

air consumption? Why diving accidents happen and how to prevent them? Whether you might sometimes actually be safer solo diving? How to dive deep safely? Or How muck diving can possibly be any fun? Scuba Confidential has the answers to these questions and many more.

Caverns Measureless to Man Grove Press

The best-selling authoritative guide returns, packed with the latest recommendations, dive tables, and instruction. Full-color photographs and illustrations depict the latest equipment, gear selection, dive locations, technologies, and techniques. Scuba Diving is an indispensable resource for preparation, management, and enjoyment of every dive.
