 This report reviews federal laws and programs affecting persons with disabilities and assesses the extent to which they: provide incentives or disincentives to the establishment of community-based services for handicapped individuals; promote the full integration of such individuals in the community, in schools, and in the workplace; and contribute to the independence and dignity of such individuals. An introductory chapter provides a description of the demographics of the U.S. disabled population. A list of federal programs serving people with disabilities is prioritized according to federal expenditures, with an estimated number of persons with disabilities served. Summarized are the National Council on the Handicapped's legislative recommendations in 10 issue areas: equal opportunity laws; employment; disincentives to work under social security laws; prevention of disabilities; transportation; housing; community-based services for independent living; educating children with disabilities; personal assistance such as attendant services, readers, and interpreters; and coordination. The recommendations propose modifications in the expenditure of disability-related dollars to improve the ability of persons with disabilities to live with dignity and as independently as possible within their communities. The report concludes with biographies of Council members. (JDD)

The second edition of *Health Insurance Resources: A Guide for People with Chronic Disease and Disability* continues to be a uniquely helpful reference for those who need and use health insurance most often but have the least access to it. The book was developed to assist individuals living with disability and chronic health conditions, as well as health care professionals, in understanding the health care system and maximizing their rights and entitlements within that system. The manual is completely updated throughout, and reflects the changes in the system since the first edition's publication in 2003. Crucially, the book includes new information about the new Medicare Prescription Drug Coverage plan, which took effect in January 2006. It also covers: Social Security Disability Insurance and Supplemental Security Income COBRA HIPAA State High Risk, Pools Insurance glossary State pharmacy assistance programs And much, much more! This essential guide contains information about a wide variety of options that will be of assistance to individuals who are uninsured, underinsured, or who have questions about insurance and don't know where to begin. It will also serve those who work with chronically ill individuals and their families, such as health care professionals and para-

professionals, consumer and patient advocates, and the educators and institutions that serve them.

Many common health problems can be treated with simple remedies you can do at home. Even if the steps you take don't cure the problem, they can relieve symptoms and allow you to go about your daily life, or at least help you until you're able to see a doctor. Some remedies, such as changing your diet to deal with heartburn or adapting your home environment to cope with chronic pain, may seem like common sense. You may have questions about when to apply heat or cold to injuries, what helps relieve the itch of an insect bite, or whether certain herbs, vitamins or minerals are really effective against the common cold or insomnia. You'll find these answers and more in Mayo Clinic Book of Home Remedies. In situations involving your health or the health of your family, the same questions typically arise: What actions can I take that are immediate, safe and effective? When should I contact my doctor? What symptoms signal an emergency? Mayo Clinic Book of Home Remedies clearly defines these questions with regard to your health concerns and guides you to choose the appropriate and most effective response.

The objectives of this study are to describe experiences in price setting and how pricing has been used to attain better coverage, quality, financial protection, and health outcomes. It builds on newly commissioned case studies and lessons learned in calculating prices, negotiating with providers, and monitoring changes. Recognising that no single model is applicable to all settings, the study aimed to generate best practices and identify areas for future research, particularly in low- and middle-income settings. The report and the case studies were jointly developed by the OECD and the WHO Centre for Health Development in Kobe (Japan).

This new edition of a critically-acclaimed text, completely revised and updated, offers practical and comprehensive coverage of the diseases, common problems, and medical care of older persons. Building on the third edition, this revision will present a new approach focusing on Evidence-Based Medicine, with new chapters including: Physiology of Aging, Clinical Strategies of Prescribing for Older Adults, Chronic Disease Management, Prevention, Doctor-Patient Communication Issues, Sources of Suffering in the Elderly, and many others. In addition, there will be a separate chapter on Evidence-Based Geriatrics, as well as sidebars in every chapter, where applicable, on Evidence-Based Medicine. This will be an all-encompassing, authoritative volume on geriatric medicine, needed more than ever because the over-80 population is the fastest growing age group in the country.

Many Americans believe that people who lack health insurance somehow get the care they really need. Care Without Coverage examines the real consequences for adults who lack health insurance. The study presents findings in the areas of prevention and screening, cancer, chronic illness, hospital--based care, and general health status. The committee looked at the consequences of being uninsured for people suffering from cancer, diabetes, HIV infection and AIDS, heart and kidney disease, mental illness, traumatic injuries, and heart attacks. It focused on the roughly 30 million -- one in seven--working--age Americans without health insurance. This group does not include the population over 65 that is covered by Medicare or the nearly 10 million children who are uninsured in this country. The main findings of the report are that working-age Americans without health insurance are more likely to receive too little medical care and receive it too late; be sicker and die sooner; and receive poorer care when they are in the hospital, even for acute situations like a motor vehicle crash.
