Mesenchymal Stromal Cell (MSC) biology has been studied for more than 4 decades and the cells have been investigated for potential clinical applications for more than 15 years. Progress has become exponential over the past decade due mainly to the broad therapeutic potential of these cells. However, MSC studies have also been subject to controversy and increasing scrutiny as new mechanisms of

action are reported and ever-expanding therapeutic applications pursued. In this book, leading authorities from all over the world, who are actively involved in this field, provide state-of-the-art knowledge of the basic biology, translational requirements and latest clinical experience with MSCs. This cutting edge book is the ideal resource for scientists and clinicians interested in pursuing an important and rapidly developing field of research that will

eventually help patients and address urgent unmet medical needs. Features include: Coverage of the biology of MSCs, latest understanding of mechanisms of action, and role in tissue homeostasis and regeneration Identifying the potential of MSCs in proceeding from bench to bedside from regulatory , GMP production, ethical and safety aspects Critical analysis of clinical studies and the potential of MSCs to treat a wide variety of human diseases and tissues.

Nanoengineering in Musculoskeletal Regeneration provides the reader an updated summary of the therapeutic pipeline—from biomedical discovery to clinical implementation—aimed at improving treatments for patients with conditions of the muscles, tendons, cartilage, meniscus, and

bone. Regenerative medicine focuses on using stem cell biology to advance medical therapies for devastating disorders. This text presents novel, significant, and interdisciplinary theoretical and experimental results related to nanoscience and nanotechnology in musculoskeletal regeneration. Content includes basic, translational, and clinical research addressing musculoskeletal repair and regeneration for the

treatment of diseases and injuries of the skeleton and its associated tissues. Musculoskeletal degeneration and complications from injuries have become more prevalent as people live longer and increasingly participate in rigorous athletic and recreational activities. Additionally, defects in skeletal tissues may immobilize people and cause inflammation and pain. Musculoskeletal regeneration research provides solutions to repair, restore, or replace

skeletal elements and associated tissues that are affected by acute injury, chronic degeneration, genetic dysfunction, and cancer-related defects. The goal of musculoskeletal regeneration medicine research is to improve quality of life and outcomes for people with musculoskeletal injury or degradation. Provides broad coverage in all research areas focused on the applications of nanotechnology in musculoskeletal regeneration Offers useful

guidance for physician-scientists with expertise in orthopedics, regenerative medicine, bioengineering, biomaterials, nanoengineering, stem cell biology, and chemistry Serves as a practical reference for many disciplines, including bioengineering, biomaterials, tissue engineering, regenerative medicine, musculoskeletal regenerative medicine, and nanomedicine

Sehnenerkrankungen sind verglichen mit knöchernen Erkrankungen häufig schwerer zu diagnostizieren, vielschichtiger in ihrer Entstehung und schwieriger zu therapieren. Da sie zudem häufig junge und aktive Patienten und vor allem

auch Sportler betreffen, stellen sie eine besondere Herausforderung in Diagnostik und Therapie dar. Dieses Buch nimmt sich der besonderen Problematik der Sehnenerkrankungen an und zeigt dem Praktiker die Besonderheiten und Fallstricke der Diagnostik und Therapie von Sehnenerkrankungen aus Expertenhand auf. Zusätzlich vermittelt das Buch fundierte Kenntnisse der Sehnenanatomie, -physiologie und -pathologie sowie neuerer Therapieansätze wie

Stammzellen oder Wachstumsfaktoren.  
*Arthroscopy and Endoscopy of the Shoulder*

The first systematic collaboration between cognitive scientists and sports psychologists considers the mind-body relationship from the perspective of athletic skill and sports practice. This landmark work is the first systematic collaboration between cognitive scientists and sports psychologists that considers the mind-body relationship from the

perspective of athletic skill and sports practice. With twenty-six chapters by leading researchers, the book connects and integrates findings from fields that range from philosophy of mind to sociology of sports. The chapters show not only that sports can tell scientists how the human mind works but also that the scientific study of the human mind can help athletes succeed. Sports psychology research has always focused on the themes, notions, and models of embodied

cognition; embodied cognition, in turn, has found striking confirmation of its theoretical claims in the psychological accounts of sports performance and athletic skill. Athletic skill is a legitimate form of intelligence, involving cognitive faculties no less sophisticated and complex than those required by mathematical problem solving. After presenting the key concepts necessary for applying embodied cognition to sports psychology, the book

discusses skill disruption (the tendency to “choke” under pressure); sensorimotor skill acquisition and how training correlates to the development of cognitive faculties; the intersubjective and social dimension of sports skills, seen in team sports; sports practice in cultural and societal contexts; the notion of “affordance” and its significance for ecological psychology and embodied cognition theory; and the mind's predictive capabilities, which enable anticipation,

creativity, improvisation, and imagination in sports performance.
