When pursuing a career in commercial real estate, it's important to narrow your field of interest as soon as possible. You'll have a head start if you can build your college coursework around the discipline. And as you interview with prospective employers, you'll stand out if you have a clear focus and thoughtful plan. The product types we will discuss in this book are: land, office, industrial, data centers, retail, hospitality, healthcare and multifamily. (Another, mixed-use, refers to a combination of one or more product types.) The various disciplines we'll review are: architecture, appraisal, capital markets, construction, development, leasing, investment, management, research and analytics and tenant representation.

Essentials of Business Law John Wiley & Sons

Throughout the Western world, a whole generation is being priced out of the housing market. For millions of people, particularly millennials, the basic goal of acquiring decent, affordable accommodation is a distant dream. Leading economist Josh Ryan-Collins argues that to understand this crisis, we must examine a crucial paradox at the heart of modern capitalism. The interaction of private home ownership and a lightly regulated commercial banking system leads to a feedback cycle. Unlimited credit and money flows into an inherently finite supply of property, which causes rising house prices, declining home ownership, rising inequality and debt, stagnant growth and financial instability. Radical reforms are needed to break the cycle. This engaging and topical book will be essential reading for anyone who wants to understand why they can't find an affordable home, and what we can do about it.

"The study and practice of real estate draws on a multitude of disciplines including architecture, urban and regional planning, building construction, urban economics, law, and finance. This diversity of perspectives presents a challenge to the instructor of a real estate principles course. Depending on their backgrounds and training and on the interests of the students, some instructors may choose to emphasize the legal concepts that define and limit the potential value of real estate. Other instructors may focus more on licensing and brokerage issues (popular topics with many students) or on the investment decision-making process. he study and practice of real estate draws on a multitude of disciplines including architecture, urban and regional planning, building construction, urban economics, law, and finance.
