Authors: A. Emin Orhan, Vaibhav V. Gupta, Brenden M. Lake. Download PDF. Abstract: Within months of birth, children have meaningful expectations about the world around them. How much of this early knowledge can be explained through generic learning mechanisms

applied to sensory data, and how much of it requires more substantive innate inductive biases? Self-supervised learning through the eyes of a child

The eyes of children

The children's vision information portal

Even if they cannot see well, children rarely complain about a problem with their sight. That makes early detection very important, because if eye problems are not corrected, they can lead to permanent vision loss.

Home page - The eyes of children

Nearsightedness, or myopia, is a vision condition in which people can see close objects clearly, but objects farther away appear blurred. Myopia occurs if the eyeball is too long or the cornea (the clear front cover of the eye) is too curved. As a result, the light entering the eye isn't focused correctly, and distant

objects look blurred. Myopia affects nearly 30% of the U.S. population.

Myopia (Nearsightedness) | AOAIs the eye a window to the brain in Sanfilippo syndrome, an untreatable form of childhood-onset dementia, Australian researchers ask in a new publication. The findings of the NHMRC-funded project ...
