Herausforderungen in der Wirtschaftsinformatik Course Technology Information Technology professionals can use this book to move beyond the excitement of web services and service oriented architecture (SOA) and begin the process of finding actionable ideas to innovate and create business value. In *Enterprise SOA: Designing IT for Business Innovation*, SAP's blueprint for putting SOA to work is analyzed from top to bottom. In addition to design, development, and architecture, vital contextual issues such as governance, security, change management, and culture are also explored. This comprehensive perspective reduces risk as IT departments implement ESA, a sound, flexible architecture for adapting business processes in response to changing market conditions. This book answers the following questions: What forces created the need for Enterprise Services Architecture? How does ESA enable business process innovation? How is model-driven development used at all levels of design, configuration, and deployment? How do all the layers of

technology that support ESA work together? How will composite applications extend business process automation? How does ESA create new models for IT governance? How can companies manage disruptive change? How can enterprise services be discovered and designed? How will the process of adapting applications be simplified? Based on extensive research with experts from the German software company SAP, this definitive book is ideal for architects, developers, and other IT professionals who want to understand the technology and business relevance of ESA in a detailed way--especially those who want to move on the technology now, rather than in the next year or two.

Master's Thesis from the year 2005 in the subject Computer Science - Commercial Information Technology, grade: 1,7, University of Auckland (Faculty of Computing), course: Master of Computing, 83 entries in the bibliography, language: English, abstract: Supply chain management (SCM) offers business benefits but is a difficult concept to master without the right software support. This dissertation is aimed at academic and IT professionals and SCM decision makers or consultants as it provides insights into SCM software and the leading concepts behind it. A qualitative approach was chosen for answering the research questions which focus on general SCM software principles but also enquire benefits, functionalities and the software architecture of SAP's SCM 4.1 solution. In addition to that, the differences between what decision makers request and what mySAP SCM 4.1 offers are addressed with the research questions. To answer these research questions, the structure of the dissertation contains a general

introduction to SCM software and includes a SCM software market overview. After this part, one major part of the dissertation contains an analysis of the dominant SCM software solution mySAP SCM (Release 4.1). The examination of mySAP SCM 4.1 focuses first on technological aspects (software architecture, technological platform and programming language) before the business benefits and functionalities of this SCM software are examined. After that, the functionalities, business benefits and the architecture of mySAP SCM 4.1 are compared with the SCM software requirements obtained from ten SCM professionals from different industries (automotive, logistics, retail, consumer packaged goods, consulting and education). The analysis of the requirements from SCM decision makers (gathered using a questionnaire) shows that an increase in SCM transparency and a reduction of SCM costs were the main requirements articulated by decision makers. The comparison of the questionnaire with the functionalities, business benefits and the architecture of mySAP SCM 4.1 then illustrates that these

requirements can be realised with SAP's SCM 4.1. Concerning future research in the field of SCM software, it was found out that SCM software will be influenced by the following developments: increasing globalisation together with the internationalisation of SCM, the trend of services oriented architecture and the integration of corporate information systems. Keywords: Supply Chain Management (SCM), Supply Chain Management Software, mySAP SCM 4.1, Supply Chain Operations Reference (SCOR) Model, Enterprise Services Architecture (ESA), Netweaver

Throughout the world, high-profile large organizations (aerospace and defense, automotive, banking, chemicals, financial

service providers, healthcare, high tech, insurance, oil and gas, pharmaceuticals, retail, telecommunications, and utilities) and governments are using SAP software to process their most mission-critical, highly sensitive data. With more than 100,000 installations, SAP is the world's largest enterprise software company and the world's third largest independent software supplier overall. Despite this widespread use, there have been very few books written on SAP implementation and security, despite a great deal of interest. (There are 220,000 members in an on-line SAP 'community' seeking information, ideas and tools on the IT Toolbox Website alone.) Managing SAP user authentication and authorizations is becoming more complex than ever, as there are more and more SAP products involved that have very different access issues. It's a complex area that requires focused expertise. This book is designed for these network and systems administrator who deal with the complexity of having to make judgmental decisions regarding enormously complicated and technical data in the SAP landscape, as well as pay attention to new compliance rules and security regulations.

Most SAP users experience significant challenges when trying to manage and mitigate the risks in existing or new security solutions and usually end up facing repetitive, expensive re-work and perpetuated compliance challenges. This book is designed to help them properly and efficiently manage these challenges on an ongoing basis. It aims to remove the 'Black Box' mystique that surrounds SAP security. * The most comprehensive coverage of the essentials of SAP security currently available: risk and control management, identity and access management, data protection and privacy, corporate governance, legal and regulatory compliance. * This book contains information about SAP security that is not available anywhere else to help the reader avoid the "gotchas" that may leave them vulnerable during times of upgrade or other system changes

This is the first book to present field studies on the application of subject-oriented business process management (S-BPM). Each case presents a specific story and focuses on an essential modeling or implementation issue, and most end with implications or suggestions for further studies. Significant variables and success factors are identified that were discovered during the respective

study and lead to suggesting S-BPM novelties. For each case, the authors explain step-by-step how the story develops, and provide readers guidance by detailing the respective rationale. The studies covered are clustered according to three main S-BPM themes: Part I “Business Operation Support” documents approaches to the practical development of S-BPM solutions in various application domains and organizational settings, while Part II “Consultancy and Education Support” highlights cases that can help to train readers in S-BPM modeling and knowledge acquisition for S-BPM lifecycle iterations. It also refers to architecting S-BPM solutions for application cases based on hands-on experience. Part III “Technical Execution Support” focuses on concepts for utilizing specific theories and technologies to execute S-BPM models. It also addresses how to create reference models for certain settings in the field.

Lastly, the appendix covers all relevant aspects needed to grasp S-BPM modeling and apply it based on fundamental examples. Its format reconciles semantic precision with syntactic rigor.>Addressing the needs of developers, educators and practitioners, this book will help companies to learn from the experiences of first-time users and to develop systems that fit their business processes, explaining the latest key methodological and technological S-BPM developments in the fields of training, research and application.
