 This manual, written with the objective of providing detailed training to both, consultants and users goes deep into the subject from initial configurations to covering the entire Order to Cash and logistics cycle. The integration points of SD-LE with Purchasing/Inventory and Accounting are explained in detail and the chapters marked clearly if it is a Configuration (C) or Transaction (U) or both. Since most of the book has been written in standard SAP, once a company code is set up along with some basic configurations defined in the first few pages, a SAP user, if so desires, can stay only with the areas marked 'U' by passing the 'C' since not everything in standard

SAP depends on configurations. Consultants or to-be consultants, of course, need to understand both sides of SAP. The effects of changes done in configuration are immediately followed by their effect on the transactions, thereby making the learning relational in real time for better understanding. From the user's perspective, not much from the subject has been left out in writing this manual and every effort has been taken to keep it relevant to the execution of order processing and logistics functions of day to day working on SAP in an orderly flow. This manual is really a result of many years of training both consultants, and business users. The author appreciates your comments and suggestions on improving this book. If I can be of any assistance in helping you understand the subject better or obtaining access to the system on which it was written for easier understanding, please feel free to drop in a mail to shefariaentinc@gmail.com

 System Identification is a special section of the International Federation of Automatic

Control (IFAC)-Journal Automatica that contains tutorial papers regarding the basic methods and procedures utilized for system identification. Topics include modeling and identification; step response and frequency response methods; correlation methods; least squares parameter estimation; and maximum likelihood and prediction error methods. After analyzing the basic ideas concerning the parameter estimation methods, the book elaborates on the asymptotic properties of these methods, and then investigates the application of the methods to particular model structures. The text then discusses the practical aspects of process identification, which includes the usual, general procedures for process identification; selection of input signals and sampling time; offline and on-line identification; comparison of parameter estimation methods; data filtering; model order testing; and model verification. Computer program packages are also discussed. This compilation of tutorial papers aims to introduce the newcomers and non-specialists in this field to some of the basic methods and procedures used for system identification.

I know, because although I have been working as an SAP SD Consultant for many years, I have myself recently certified with the latest version of the Associate Certification test. Before you start here are some Key features of the SAP SD Associate Certification Exam. The "Sales and Distribution, ERP 6.0 EhP6"

certification exam verifies that the candidate has the knowledge in the area of Sales Order Management for the consultant profile This certificate proves that the candidate has a basic understanding within this consultant profile, and can implement this knowledge practically in projects. Associate Certifications are targeting profiles with 1 - 3 years of knowledge and experience. The primary source of knowledge and skills is based on the corresponding training material.. The exam is Computer based and you have three Hours to answer 80 Questions. The Questions are (mostly) multiple choice type and there is NO penalty for an incorrect answer. Some of the Questions have more than one correct answer. You must get ALL the options correct for you to be awarded points. For questions with a single answer, the answers will have a button next to them. You will be able to select only one button. For questions with multiple answers, the answers will have a 'tick box' next to them. This allows you to select multiple answers. You are not allowed to use any reference materials during the certification test (no access to online documentation or

to any SAP system). Clearing the Certification will not automatically lead you to a job. However a Certification with some project experience will certainly open a lot of doors for you. So if you have little or no experience, you should get yourself certified, get some project experience, and then the whole of the SAP World open for you to explore.
