Sustainability is a concept that unifies the environment, economy, and society, and has spread as a key concept in enterprise management. The United Nations adopted the Sustainable Development Goals (SDGs) in 2015, which require worldwide

efforts to reach a sustainable society, and also applies to private enterprises. Sustainability should be developed in connection with management strategy, and Asia's role, including that of Japan, is important to improve global sustainability. This book addresses how sustainability management in the Asian context is currently practised and proposes practices for the future. Investigation of the effect of business domain characteristics on the integration of sustainability and management, and elucidation of the process and features of EMCS (Environmental Management Control System) inside and outside of companies have been indicated. The book points that companies need to use and design Sustainability Management Control Systems in order to implement a CSR (Corporate Social Responsibility) strategy and match employees' behavior to CSR activities. MFCA (Material Flow Cost Accounting) has started to expand rapidly

into other Asian industries from Japan as a method of Environmental Management Control. The fundamental idea and procedure of MFCA and many case examples of Japanese MFCA have been reported. These findings help us to consider a policy for continuous use of MFCA. Moreover, the relationship between Toyota Production System and MFCA has been explained and 'Material Flow Time Costing' as a new management accounting concept is proposed. Based on the literature review, the study has made recommendations for Asian companies' strategic management and governmental policy-making to improve both quality and quantity of sustainability disclosure in Asia. One of the papers has identified the development and implementation of social and environmental accounting by Indonesian state-owned enterprises and their determining factors. In a Japanese manufacture, the effect of smoothed production has been analyzed as an example of environmental management. This led to an increase in production quality without additional capital spending.

Thomas S. Konrad analyzes the management control design and reveals critical success factors of strategically oriented public-private partnerships for development between international governmental actors and the private sector. He builds a sound basis for the identification of a research gap and the derivation of research questions. The results generate sufficient evidence to answer these questions and therefore to close the identified research gap. Finally, he excelled in the discussion of the results by making a contribution of theory and by providing substantive recommendations to practitioners equally well.

Feed Forward and Asian Perspectives Palgrave Macmillan
Corporations and Sustainability: The South Asian Perspective is a collection of contributions from leading academics and practitioners which provides an overview of the key challenges and opportunities related to sustainability in South Asia. The last two decades have seen rapid and often dramatic changes in the

institutional, economic and ecological contexts in which firms operating in South Asian economies find themselves. South Asia is increasingly seen both as a driver of global economic growth as well as a barrier to sustainable development. The most significant driver of change in the region has been the economic liberalization attempts of national governments, resulting in easier and faster flows of information, labour and capital between these economies and the rest of the world. Consequently, global environmental and social concerns are increasingly driving governmental and corporate decision-making processes for firms operating in South Asia. In responding to these emerging challenges, firms have begun to re-evaluate and redesign their strategies, structures and processes as well as incorporate sustainability principles into their strategies. Corporations and Sustainability: The South Asian Perspective thus delivers an important perspective for researchers as well as students of master's-level courses on business and environment. It is particularly useful for

those trying to understand the key sustainability challenges in the South Asian context as well some of the solutions emerging in the critical areas of heavy industry and also service sectors.

As the centre of world economic development has shifted towards Asia over the last two decades, many Asian countries have witnessed rapid growth in economic and business operations. In light of these recent changes, accounting has played a significant role in assisting economic transition and advancement in Asian countries. However, although the general trend over recent decades towards convergence in financial reporting standards and practices has dramatically improved the comparability of accounting information, considerable variances remain in practices between countries. This Handbook therefore provides an up-to-date review of contemporary accountancy across Asia, illustrating how standards have been reshaped to accommodate the needs of economic and social trends. As well as providing an overview of standards in the larger Asian economies of China, India and Japan, contributions to the Handbook also include studies of countries such as Sri Lanka, Nepal,
