Doing well with money isn't necessarily about what you know. It's about how you behave. And behavior is hard to teach, even to really smart people. Money—investing, personal finance, and business decisions—is typically taught as a math-based field, where data and formulas tell us exactly what to do. But in the real world people don't make financial decisions on a spreadsheet. They make them at the dinner table, or in a meeting room, where personal history, your own unique view of the world, ego, pride, marketing, and odd incentives are scrambled together. In *The Psychology of Money*, award-winning author Morgan Housel shares 19 short stories exploring the strange ways people think about money and teaches you how to make better sense of one of life's most important topics.

How we can all be lifelong wonderers: restoring the sense of joy in discovery we felt as children. From an early age, children pepper adults with questions that ask why and how: Why do balloons float? How do plants grow from seeds? Why do birds have feathers? Young children have a powerful drive to learn about their world, wanting to know not just what something is but also how it got to be that way and how it works. Most adults, on the other hand, have little curiosity about whys and hows; we might unlock a door, for example, or boil an egg, with no idea of what happens to make such a thing possible. How can grown-ups recapture a child's sense of wonder at the world? In this book, Frank Keil describes the cognitive dispositions that set children on their paths of discovery and explains how we can all become lifelong wonderers. Keil describes recent research on children's minds that reveals an extraordinary set of emerging abilities that underpin their joy of discovery—their need to learn not just the facts but the underlying causal patterns at the very heart of science. This glorious sense of wonder, however, is stifled, beginning in elementary school. Later, with little interest in causal mechanisms, and motivated by intellectual blind spots, as adults we become vulnerable to misinformation and manipulation—ready to believe things that aren't true. Of course, the polymaths among us have retained their sense of wonder, and Keil explains the habits of mind and ways of wondering that allow them—and can enable us—to experience the joy of asking why and how.

In this instant New York Times bestseller, Angela Duckworth shows anyone striving to succeed that the secret to outstanding achievement is not talent, but a special blend of passion and persistence she calls “grit.” “Inspiration for non-genius everywhere” (People). The daughter of a scientist who frequently noted her lack of “genius,” Angela Duckworth is now a celebrated researcher and professor. It was her early eye-opening stints in teaching, business consulting, and neuroscience that led to her hypothesis about what really drives success: not genius, but a unique combination of passion and long-term perseverance. In Grit, she takes us into the field to visit cadets struggling through their first days at West Point, teachers working in some of the toughest schools, and young finalists in the National Spelling Bee. She also mines fascinating insights from history and shows what can be gleaned from modern experiments in peak performance. Finally, she shares what she’s learned from interviewing dozens of high achievers—from JP Morgan CEO Jamie Dimon to New Yorker cartoon editor Bob Mankoff to Seattle Seahawks Coach Pete Carroll. “Duckworth’s ideas about the cultivation of tenacity have clearly changed some lives for the better” (The New York Times Book Review). Among Grit’s most valuable insights: any effort you make ultimately counts twice toward your goal; grit can be learned, regardless of IQ or circumstances; when it comes to child-rearing, neither a warm embrace nor high standards will work by themselves; how to trigger lifelong interest; the magic of the Hard Thing Rule; and so much more. Winningly personal, insightful, and even life-changing, Grit is a book about what goes through your head when you fall down, and how that—not talent or luck—makes all the difference. This is “a fascinating tour of the psychological research on success” (The Wall Street Journal).

Cybernetics (loosely translated from the Greek): “a helmsman who steers his ship to port.” Psycho-Cybernetics is a term coined by Dr. Maxwell Maltz, which means, “steering your mind to a productive, useful goal so you can reach the greatest port in the world, peace of mind.” Since its first publication in 1960, Maltz’s landmark bestseller has inspired and enhanced the lives of more than 30 million readers. In this updated edition, with a new introduction and editorial commentary by Matt Furey, president of the Psycho-Cybernetics Foundation, the original text has been annotated and amplified to make Maltz’s message even more relevant for the contemporary reader. “Before the mind can work efficiently, we must develop our perception of the outcomes we expect to reach. Maxwell Maltz calls this Psycho-Cybernetics; when the mind has a defined target it can focus and direct and refocus and redirect until it reaches its intended goal.” —Tony Robbins (from Unlimited Power) Maltz was the first researcher and author to explain how the self-image (a term he popularized) has complete control over an individual’s ability to achieve (or fail to achieve) any goal. And he

developed techniques for improving and managing self-image—visualization, mental rehearsal, relaxation—which have informed and inspired countless motivational gurus, sports psychologists, and self-help practitioners for more than fifty years. The teachings of Psycho-Cybernetics are timeless because they are based on solid science and provide a prescription for thinking and acting that lead to quantifiable results.

Dweck's Mindset: The New Psychology of Success includes a summary of the book, review, analysis & key takeaways, and detailed "About the Author" section. PREVIEW: Mindset: The New Psychology of Success is the end result of decades of research by Stanford University professor and psychologist Carol S. Dweck. In the book, Dweck argues that a person's mindset, that is, how they view their own abilities and approach challenges, is the primary predictor of one's success. Dweck classifies "mindset" as a simple binary: although there is a middle ground, you either have a predominant fixed mindset or a predominant growth mindset. The fixed mindset is the belief that one's qualities and abilities are immutable and cannot be changed. In contrast, the growth mindset is the idea that a person can improve their intelligence and talents through hard work, dedication, and perseverance.
