□ Nucleic acids are molecules that store information for cellular growth and reproduction □ There are two types of nucleic acids: - deoxyribonucleic acid (DNA) and ribonucleic acid (RNA) □ These are polymers consisting of long chains of monomers called nucleotides □ A nucleotide consists of a nitrogenous base, pentose sugar and a phosphate group.

A nucleic acid contains three parts: a phosphate group, a sugar group (deoxyribose or ribose), and a base. The bases are adenine, guanine, cytosine, and thymine (uracil for RNA). When a
