East-West Migration in the European Union
Cambridge University

Press
This volume seeks to trace certain tendencies and developments in social policy in Western Europe and the United States. In the first, which is general, Professor Girod recalls the objectives of social policy as well as offering a number of scenarios or strategies for the future of social policy. The social policy philosophy of Schumpeter, Hayek and Röpke, and their current

vitality, are traced by Professor de Luabier. Professor Delcourt, in his chapter on Social Policy - crisis or mutation?, presents a critical analysis of various trends in social policy and in particular the elitist philosophy of Hirschmann. The second part of the volume deals with particular national experiences: Switzerland by Professor Tschudi; Sweden by Dr. Hartmann; the United States

by Professor Bénéton; and Italy by Professor Donati. The book broadly covers the diverse range of subject matter encompassed within the term 'social policy' and should be of great value both to social policy practitioners as well as to those academics concerned with the fields of economics, sociology and political science.

A Social History of Twentieth-Century Europe Princeton University Press
 Alan S. Milward was a renowned historian of contemporary Europe. In addition to his books, as well as articles and

chapters in edited books, he also wrote nearly 250 book reviews and review articles, some in French and German, which were published in journals worldwide. Taken together they reveal a remarkable degree of theoretical consistency in his approach to understanding the history of Europe since the French Revolution. This book brings together these previously unexamined pieces of

historical analysis in order to trace and shed light on key intellectual debates taking place in the second half of the 20th century. Many of these discussions continue to influence us today, such as the role of Germany in Europe, the economic, social and political foundations of European integration, the European rescue of the nation-state, the reasons for launching the single currency, the

conditions for retaining the allegiance of European citizens to the notions of nation and supra-nation, and ultimately the issue of democratic governance in a global environment. In bringing together these reviews and review articles, the book provides an introduction to the main scholarly achievements of Milward, in his own words. Fernando Guirao and Frances M.B. Lynch provide an

introduction to the volume, which both guides the reader through many of the academic debates embedded within the text while underlining their contemporary relevance. By introducing and bringing together this hitherto overlooked treasure trove of historical analysis, this book maps a close itinerary of some of the most salient intellectual debates of the second half of the 20th

century and beyond. This unique volume will be of great interest to scholars of economic history, European history and historiography .

The Integration of the European Economy Since 1815

Palgrave
"The economies of Europe are changing rapidly. More and more employment and output comes from the service sector: less employment is

to be found in agriculture, mining and manufacturing although output has been sustained. Economies have deindustrialised, the environment has improved, the large factories have been broken up into smaller enterprises; products, production and labour have all become more flexible. This book examines these processes of economic

change in western Europe, in southern Europe and in east-central Europe." "These changes bring problems as well as opportunities. Unemployed manual workers are not re-employed in the service sector; there is increased social and economic polarisation; Europe has suffered from the increasing levels of international competition. The final section of the book concerns

policy intervention to tackle some of these problems. Policies for equity, efficiency and environmental protection are examined as are the policy framework and the political basis for policy."--

Alan S. Milward and a Century of European Change
Routledge
This volume

charts the cultural, political, and social changes which took place in Western Europe during the first thirteen years after the Second World War. It brings together seventeen essays by experts from Britain, France, Germany, Italy, and the USA. Western European nations faced many challenges during this period: the psychological and material aftermath of the war; the

need for economic and social restructuring; and the impact of the Cold War on domestic political, social, and cultural developments. To explore the responses to these challenges, transnational and national perspectives need to be combined. Thus the first two sections compare key developmental processes in Britain, France, West Germany, and Italy. They ask how these nations came

to terms with their most recent history, and how they addressed the problems of economic and social restructuring. A solely comparative approach along national lines, however, does not do justice to the historical reality of these societies. After all, they were not hermetically sealed national units, but connected by individual and institutional contacts and the transfer of goods and ideas. The third section examines the area in which these links had become most obvious after 1945-the debates about the beginnings of European integration. The fourth section focuses on the influence of the USA on the social and cultural re-organization of Western Europe. It abandons national subdivisions altogether and examines some agents of American influence in Western Europe.

An Economic History of Western Europe 1945-1964

Routledge
For over thirty years David S. Landes's *The Unbound Prometheus* has offered an unrivalled history of industrial revolution and economic development in Europe. Now, in this updated edition, the author reframes and reasserts his original arguments in the light of debates about globalisation and comparative economic growth. The book begins with a classic account of the

characteristics, progress, and political, economic and social implications of the Industrial Revolution in Britain, France and Germany. Professor Landes here raises the much-debated question: why was Europe the first to industrialise? He then charts the economic history of the twentieth-century: the effect of the First World War in accelerating the dissolution of the old international economy; the economic

crisis of 1929–32; Europe's recovery and unprecedented economic growth following the Second World War. He concludes that only by continuous industrial revolution can Europe and the world sustain itself in the years ahead. Routledge Consumption Patterns in Eastern and Western Europe discusses the consumption tendencies in Czechoslovakia, France, the German

Democratic Republic, Hungary, Italy, Poland, the Soviet Union, and Switzerland. The topics discussed include the nomenclature of goods and services; accounting framework and analytical tables; enlarged consumption and national income; and structure of social consumption funds according to the form of allocation to beneficiaries. The market and non-market forms

of enlarged consumption; financing of collective funds by households; structure of enlarged consumption; and forms of financing enlarged consumption are also described in this text. This book is beneficial to students and individuals interested in the resource allocation practices of countries in Eastern and Western Europe. **Economic and Social History of Medieval**

the social geography of Western Europe. It begins by outlining the character of the region and proceeds with an exploration of demographic and cultural features, including migration and ethnic groups. The political organisation of nations and regions are analysed along with regional change and development. The study concludes with a consideration of key issues central to the

geography of social well-being such as regional convergence/divergence and the impact of public expenditure patterns.

Parties, Elections, and Policy Reforms in Western Europe

Cambridge Scholars Publishing

The changing character of the economies in Eastern and Western Europe are leading more people to start their own businesses. This volume, first published in 1987,

highlights the trends developing over the closing decades of the twentieth century. Although business start-up requires financial and marketing skills, it also demands important psychological and sociological inputs. On the basis of detailed accounts of the relevant social processes, this volume describes the varied experiences of entrepreneurs as they

are emerging among various groups in both Eastern and Western Europe including the unemployed, women, ethnic minorities and others. This book will be of interest to students of business studies and sociology.

The Outlook for Western Europe

Routledge
Social pacts – policy agreements between governments, labor unions and sometimes employer organizations – began to

emerge in many countries in the 1980s. The most common explanations for social pacts tend to focus on economic factors, influenced by industrial relations institutions such as highly coordinated collective bargaining. This book presents, and tests, an alternative and complementary explanation highlighting the electoral calculations made by political

parties in choosing pacts. Using a dataset covering 16 European countries for the years 1980-2006, as well as eight in-depth country case studies, the authors argue that governments' choice of social pacts or legislation is less influenced by economic problems, but is strongly influenced by electoral competition. Social pacts will be attractive when party leaders

perceive them to be helpful in reducing the potential electoral costs of economic adjustment and wage restraint policies. Alternatively, parties may forgo negotiations with social partners and seek to impose such policies unilaterally if they believe that approach will yield electoral gain or minimize electoral costs. By combining the separate literatures on political economy and

party politics, the book sheds new light on the dynamics of social pacts in Western Europe. This book will be of interest to students and scholars of political science, economics, political economy, European Studies and comparative politics. The Political Economy of the European Social Model Routledge A Social History of Twentieth-Century Europe offers a systematic

overview on major aspects of social life, including population, family and households, social inequalities and mobility, the welfare state, work, consumption and leisure, social cleavages in politics, urbanization as well as education, religion and culture. It also addresses major debates and diverging interpretations of historical and social research regarding the history of European

<p>societies in the past one hundred years. Organized in ten thematic chapters, this book takes an interdisciplinary approach, making use of the methods and results of not only history, but also sociology, demography, economics and political science.
