In 1999 the American Board of Interventional Medicine is offering, for the first time, what will be an annual certification examination in Interventional Cardiology. Board certification is designed to recognize excellence among physicians specializing in interventional cardiology. *Interventional Cardiology: The Essentials for the Boards* is the first book to be written in accordance with the American Board of Interventional Medicine's own guidelines. The book is structured to accurately represent the balance of subject matter that can be expected on the certification examination. Care is taken to cover the essential points in each individual topic, highlighting state-

of-the-art therapy and unresolved issues. Most chapters are presented in a question-and-answer format, along with a chapter of clinical case descriptions covering a broad range of clinical and interventional problems. A special chapter of "Interventional Cardiology Pearls" provides condensed, easily digested summaries of the most useful information in the previous chapters. In addition, it is the first book of its kind to include a detailed Table of Contents and a Subject Index, making it easy for the examinee to locate specific topics. This book will be of great help to interventional cardiologist specialists preparing for the board certification exams. General cardiologists, cardiology nurses, cardiac catheterization lab support staff, and general cardiology fellows interested in increasing their understanding of intervention and related topics will also find this work useful.

100 Cases in Clinical Medicine is an indispensable revision tool for medical students preparing for clinical examinations or OSCEs. Using scenarios which mimic daily life, the cases will interest students in clinical problems and help them develop their clinical reasoning skills, with each case presenting details of a patient's medical history and the key findings of a clinical examination, together with initial investigation results for evaluation. Key questions then prompt the student to evaluate the patient, and reach a decision regarding their condition and the possible management plan, while the answer pages will help the student to

understand the processes that a clinician goes through in dealing with the problems presented. Contents are organised to provide a quick review of each body system, with a selection of cases relevant to that specific system, then the majority are presented randomly to mimic real life in a GP surgery or emergency department. New to this edition: a review of each body system as well as random cases; new page design with a second colour used throughout; and brought up-to-date with 25% new cases.

Pearls for Clinical Practice CRC Press
In the unique vignette format of the Pearls Series®®, this book presents a variety of problems that challenge emergency physicians in everyday practice. For each patient, the authors present the case scenario, physical findings, lab data, and a clinical photo, and the reader is challenged to formulate a diagnosis and a treatment strategy. The next page reveals the diagnosis, discusses the condition, and leaves the reader with several "pearls of wisdom" distilled from the case. Actual real-life case studies are presented. Efficient problem-solving, self-study approach is ideal for board review
Important points (pearls) are distilled from the case presentation

Improving Medical Education Through Clinical Pharmacy Pearls Elsevier Health Sciences

This text, written by fellows and reviewed by faculty at Memorial Sloan-Kettering Cancer Center, covers novel therapies and current techniques in this rapidly evolving field. Each vignette presents a real patient case and a clinical photo-graph; then challenges readers to formulate a diagnosis and treatment plan. The next page reveals the correct diagnosis, discusses the disorder, clinical course, and outcome of the patient, and concludes with 3-4 clinical pearls distilled from the case.

Clinical judgment is a critical aspect – perhaps the most critical aspect – of efficient, accurate, and cost-effective patient care. Focusing on essential clinical skills, *On Rounds: 1000 Internal Medicine Pearls* helps clinicians in training and in practice to identify the critical findings that will simplify complex clinical problems and lead to an accurate diagnosis. One thousand easy-to-remember clinical aphorisms, or "pearls," help you distinguish the important findings from the incidental, pointing out the distinctive features amidst the mass of data that is accumulated in the evaluation of a sick patient, and leading to the development of mature clinical judgment. Go "on rounds" with one of the most respected educators in internal medicine and learn from his nearly 50 years of clinical experience. Focus on the areas that are often a source of confusion for students, trainees, and even seasoned practitioners. Learn each pearl in a relevant clinical context, with tables, clinical images, and physiology

information, where appropriate. Recognize “black pearls:” statements that, although widely believed, are demonstrably false. Improve your clinical judgment skills whether you’re a resident or an experienced clinician. Carry these pocket-sized pearls with you for quick reference.

Perioperative Medicine CRC Press
Bridge the gap between pathophysiology and clinical medicine in a succinct outline of core internal medicine topics! Originally created and road-tested by a resident and then updated by a team of resident authors, Huppert’s Notes succinctly organizes the foundational science covered early in medical school and the clinical approaches encountered in clerkships and beyond. This marriage of pathophysiology and clinical medicine provides a framework for how to approach internal medicine concepts mechanistically, rather than through memorization. You’ll find concise descriptions of common medical conditions with diagnostic and management pearls, as well as high-yield diagrams and tables to emphasize key concepts. Covering all internal medicine subspecialties, each Huppert’s Notes chapter is organized in an intuitive and consistent outline format for rapid access: Anatomy & Physiology
Diagnostics Approaches & Chief Complaints Diseases & Pathophysiology

A unique tool for teaching and learning the top 100 most teachable topics in internal medicine There are many challenges for residents when training students who are making the big "jump" from preclinical to clinical. Most notably, they need to find time to pick and prepare topics to teach in meaningful ways without the availability of a blackboard in the learning hospital. Students also need to quickly be able to grasp these concepts quickly and with the ability to recall them later. This teaching manual primarily focuses on physiology/pathophysiology/exam findings with the goal of providing content to make teaching and learning on the wards easier for both attendings/senior residents and interns/medical students. It features the 100 most teachable topics (clinical pearls) in an image-based presentation and will cover all the major disciplines of internal medicine, including cardiology,

gastroenterology, endocrine, and infectious disease. Each topic, or card, has an image on one side to prompt discussion (ECG, CXR, physical exam finding, etc.), and the flip side includes teaching points organized in question and answer format. They are presented in a pocket-sized binder with removable cards so both residents and students can remove only the topics of the day or ones they need to study. Each topic area has been reviewed by a specialist at Harvard Medical School. Visual, easy-to-use and reference tool for on-the-go. Discusses the "why" behind a teachable topic. Q&A format serves both rotation and exam prep. Case-based to practice clinical pearls and complex topics.

Decision Making in Perioperative Medicine: Clinical Pearls McGraw Hill Professional

It is vitally important for medical students and junior doctors to grasp an understanding of 'real-life medicine'. This innovative book of cases shows how a particular presentation may progress, and the different complications that may arise and emerge over time, which may be missed by the 'snapshot in time' approach taken by many problem-based volumes. The content reflects the average length of stay for a patient in hospital, in which their situation can change in a multitude of ways, and the management of chronic conditions may also need to be adapted as complications arise. Demonstrates the real bedside experiences that medical students can expect, in whichever simple or complex way that they may present. Cases selected from a range of sub-specialties for comprehensive coverage across the curriculum. Illustrates the complicated, progressive problems that will be seen while practicing as a doctor with detailed

diagrams and diagnostic imagery to aid understanding. Shows, with timepoints, how differential diagnoses may change as more information becomes available and new symptoms arise. Describes a typical initial hospital stay, and subsequent presentations to the general practitioner and hospital readmission. The Authors Andrew Solomon, BM BCH MA(Hons) DM FRCP, is a Consultant Physician, East and North Hertfordshire NHS Trust, Stevenage, UK. Julia Anstey, BSc (Hons) MBBS, is a Foundation Doctor, Somerset NHS Foundation Trust, Taunton, UK. Liora Wittner, MBBS BSc, is a Resident in Internal Medicine, Shamir Medical Centre, Be'er Ya'akov, Israel. With contributions from Priti Dutta, MBBS BSc FRCR, Consultant Radiologist, Royal Free London NHS Foundation Trust, London, UK.

This second edition by noted sleep medicine authority Richard B. Berry presents 100 cases that review key elements in the evaluation and management of patients with a wide variety of sleep disorders. Sleep disorders are among the most frequent health complaints physicians encounter: one third of adults experience occasional or persistent sleep problems. These disorders become a major health problem when they impair daytime functioning. Includes information on apnea, bed partners, continuous positive airway pressure (CPAP), depression, excessive daytime sleepiness, insomnia, melatonin, multiple sleep latency test

(MSLT), narcolepsy, night terrors, obesity, obstructive sleep apnea, periodic limb movements in sleep, REM (rapid eye movement) sleep, restless leg syndrome, sleep stages, snoring, somnambulism, etc.

The Fenway Guide to Lesbian, Gay, Bisexual, and Transgender Health
Springer

The new 2nd edition includes 100 brand new cases covering the diagnosis and management of interesting and challenging problems in general internal medicine. Each patient's case is followed by the physical examination and initial diagnostic impression which prompts the reader to derive his/her own preliminary diagnosis and plan for treatment. Laboratory findings are then given along with a detailed discussion of how the patient was diagnosed and the follow-up results. At the end of each case, valuable clinical pearls (major points) are provided. 80 new case histories present vital clinical information on the diagnosis and treatment of various disorders. 80 illustrations, with radiographs, EKG tracings, CT scans, MR images, and microscopic findings highlight key elements outlined in various cases. Extremely useful problem solving format for preparation of board exams.
