Observer's Airliners Frederick Warne Publishers

First flown in 1972, Airbus medium-range A300 has enjoyed a production run of more than 400 units, most of which are still in service throughout the world. In fact, the European consortium widebody remains in limited production nearly three decades later. This colour history of the prolific jetliner covers an alphabet soup of A300 variants photographed in a variety of liveries from around the globe.

You are there on the flightdeck as ten major airline accidents unfold in concise and spellbinding detail. The fascinating, ongoing story of how international passenger jet flying has developed through tragedy to become safer than walking down the street! Why these airliners crashed and the valuable lessons learned are fully revealed in this informative book. Sftbd., 8 1/2"x 11", 156

Modern Commercial Aircraft McGraw-Hill

Trends such as the massive growth in availability of air travel and air freight are among those which have led to aviation becoming one of the fastest growing emitters of greenhouse gases. These trends have also caused a shift in expectations of how we do business where we go on holiday and what food and goods we can buy. For these reasons aviation is (and is set to stay) high up on global political organizational and media agendas. This textbook is the first to attempt a comprehensive review of the topic bringing together an international team of leading scientists. Starting with the science.

The current conditions of the Air Transport industry, as well as expectations for the future, are presented in sections covering the historical and present status of air transportation, regulation and administration of air transportation, air carrier aircraft (Boeing, McDonnell Douglas, Lockheed Martin, Airbus, and National Aerospace), and general aviation. The final legislation of the General Aviation Revitalization Act (1994) is presented in a new chapter. The included disk contains a DOS-based summary of the chapters.
