HALEY CHRISTINE

The Cambridge World History: Volume 6, The Construction of a Global World, 1400-1800 CE, Part 1, Foundations Routledge

Helping readers create a consistently Christian worldview, William Hasker addresses key questions of metaphysics and discusses possible answers. In the *Contours of Christian Philosophy* series.

Emperor of the World Cambridge University Press

In conjunction with top survey researchers around the world and with Nielsen Media Research serving as the corporate sponsor, the *Encyclopedia of Survey Research Methods* presents state-of-the-art information and methodological examples from the field of survey research. Although there are other "how-to" guides and references texts on survey research, none is as comprehensive as this *Encyclopedia*, and none presents the material in such a focused and approachable manner. With more than 600 entries, this resource uses a Total Survey Error perspective that considers all aspects of possible survey error from a cost-benefit standpoint.

Architectural Techniques of the Greeks and Romans Oxford University Press

First published in Italy in 2009 by Arsenale-Editrice, Verona.

Consumerism in the Ancient World Manchester University Press

Analysing political discourse in the British press during a time of crisis and austerity, this book examines how the concept of the welfare state has been constructed between 2008 and 2015. At a time when the financial crisis and government policies have put the welfare state under increased pressure, a corpus from four British newspapers from across the political spectrum - the *Guardian*, *Daily Mirror*, *Daily Mail*, and *Daily Telegraph* - is brought together to investigate the political debate on its evaluation and the ambiguity about its exact definition. Combining two theoretical approaches, Malgorzata Paprota outlines the figurative models and scenarios relevant to this element of the political system. The discourse-historical approach to discourse analysis is used to establish what the welfare state is, tracing the boundaries of the concept and which elements of political reality are explicitly associated with it. Conceptual metaphor theory is then used to explore the figurative conceptualisations of the welfare state. Together, this book shows the discursive construction, and shifting boundaries and metaphors, of the welfare state by the British press and its use in current political debates.

A Guide To Their Planning And Execution Penn State Press

Charlemagne never traveled farther east than Italy, but by the mid-tenth century a story had begun to circulate about the friendly alliances that the emperor had forged while visiting Jerusalem and Constantinople. This story gained wide currency throughout the Middle Ages, appearing frequently in chronicles, histories, imperial decrees, and hagiographies—even in stained-glass windows and vernacular verse and prose. In *Emperor of the World*, Anne A. Latowsky traces the curious history of this myth, revealing how the memory of the Frankish Emperor was manipulated to shape the institutions of kingship and empire in the High Middle Ages. The legend incorporates apocalyptic themes such as the succession of world monarchies at the End of Days and the prophecy of the Last Roman Emperor. Charlemagne's apocryphal journey to the East increasingly resembled the eschatological final journey of the Last Emperor, who was expected to end his reign in Jerusalem after reuniting the Roman Empire prior to the Last Judgment. Instead of relinquishing his imperial dignity and handing the rule of a united Christendom over to God as predicted, this Charlemagne returns to the West to commence his reign. Latowsky finds that the writers who incorporated this legend did so to support, or in certain cases to criticize, the imperial pretensions of the regimes under which they wrote. New versions of the myth would resurface at times of transition and during periods marked by strong assertions of Roman-style imperial authority and conflict with the papacy,

most notably during the reigns of Henry IV and Frederick Barbarossa. Latowsky removes Charlemagne's encounters with the East from their long-presumed Crusading context and shows how a story that began as a rhetorical commonplace of imperial praise evolved over the centuries as an expression of Christian Roman universalism.

Constructing the Ancient World Stanford University Press

It has become popular in recent years to talk about 'identity' as an aspect of engagement with technology - in virtual environments, in games, in social media and in our increasingly digital world. But what do we mean by identity and how do our theories and assumptions about identity affect the kinds of questions we ask about its relationship to technology and learning? *Constructing the Self in a Digital World* takes up this question explicitly, bringing together authors working from different models of identity but all examining the role of technology in the learning and lives of children and youth.

A Pattern Language Routledge

Encountering an ancient text not only as a historical source but also as a literary artifact entails an important paradigm shift, which in recent years has taken place in classical and Oriental philology. Biblical scholars, Egyptologists, and classical philologists have been pioneers in supplementing traditional historical-critical exegesis with more-literary approaches. This has led to a wealth of new insights. While the methodological consequences of this shift have been discussed within each discipline, until recently there has not been an attempt to discuss its validity and methodology on an interdisciplinary level. In 2006, the Faculty of Bible and Biblical Interpretation at the Hochschule für Jüdische Studien, Heidelberg, and the Faculty of Theology at the University of Heidelberg invited scholars from the U.S., Canada, the Netherlands, Israel, and Germany to examine these issues. Under the title "Literary Fiction and the Construction of Identity in Ancient Literatures: Options and Limits of Modern Literary Approaches in the Exegesis of Ancient Texts," experts in Egyptology, classical philology, ancient Near Eastern studies, biblical studies, Jewish studies, literary studies, and comparative religion came together to present current research and debate open questions. At this conference, each representative (from a total of 23 different disciplines) dealt with literary theory in regard to his or her area of research. The present volume organizes 17 of the resulting essays along 5 thematic lines that show how similar issues are dealt with in different disciplines: (1) *Thinking of Ancient Texts as Literature*, (2) *The Identity of Authors and Readers*, (3) *Fiction and Fact*, (4) *Rereading Biblical Poetry*, and (5) *Modeling the Future by Reconstructing the Past*.

Constructing the Self in a Digital World Bloomsbury Publishing

Ethnographic fieldwork is traditionally seen as what distinguishes social and cultural anthropology from the other social sciences. This collection responds to the intensifying scrutiny of fieldwork in recent years. It challenges the idea of the necessity for the total immersion of the ethnographer in the field, and for the clear separation of professional and personal areas of activity. The very existence of 'the field' as an entity separate from everyday life is questioned. Fresh perspectives on contemporary fieldwork are provided by diverse case-studies from across North America and Europe. These contributions give a thorough appraisal of what fieldwork is and should be, and an extra dimension is added through fascinating accounts of the personal experiences of anthropologists in the field.

Constructing the Field Pine Forge Press

The first detailed and comprehensive study of Rudolf Carnap, an influential figure in twentieth-century philosophy.

Immersing students in Java and the Java Virtual Machine (JVM), *Introduction to Compiler Construction in a Java World* enables a deep understanding of the Java programming language and its implementation. The text focuses on design, organization, and testing, helping students learn good software engineering skills and become better programmers. The book covers all of the standard

compiler topics, including lexical analysis, parsing, abstract syntax trees, semantic analysis, code generation, and register allocation. The authors also demonstrate how JVM code can be translated to a register machine, specifically the MIPS architecture. In addition, they discuss recent strategies, such as just-in-time compiling and hotspot compiling, and present an overview of leading commercial compilers. Each chapter includes a mix of written exercises and programming projects. By working with and extending a real, functional compiler, students develop a hands-on appreciation of how compilers work, how to write compilers, and how the Java language behaves. They also get invaluable practice working with a non-trivial Java program of more than 30,000 lines of code. Fully documented Java code for the compiler is accessible at <http://www.cs.umb.edu/~j-/>

Towns, Buildings, Construction SAGE Publications

A basic motivation for social and cultural life is the problem of death. By analysing the experiences of dying and bereaved people, as well as institutional responses to death, Clive Seale shows its importance for understanding the place of embodiment in social life. He draws on a comprehensive review of sociological, anthropological and historical studies, including his own research, to demonstrate the great variability that exists in human social constructions for managing mortality. Far from living in a 'death denying' society, dying and bereaved people in contemporary culture are often able to assert membership of an imagined community, through the narrative reconstruction of personal biography, drawing on a variety of cultural scripts emanating from medicine, psychology, the media and other sources. These insights are used to argue that the maintenance of the human social bond in the face of death is a continual resurrective practice, permeating everyday life.

Constructing World Culture Cambridge University Press

Envisioned as a much needed celebration of the massive strides made in translation and interpreting studies, this eclectic volume takes stock of the latest cutting-edge research that exemplifies how translation and interpreting might interact with such topics as power, ideological discourse, representation, hegemony and identity. In this exciting volume, we have articles from different language combinations (e.g. Arabic, English, Hungarian and Chinese) and from a wide range of sociopolitical, cultural, and institutional contexts and geographical locales (China, Iran, Malaysia, Russia and Nigeria). Those chapters also draw on a diverse range of theoretical perspectives and methodological approaches (e.g. critical discourse analysis, Bourdieu's sociological theories, corpus linguistics, narrative theory and structuration theory), focusing on translation and interpreting relating to various settings and specialised genres (traditional media, digital media, subtitling, manga, etc.). As such, this volume serves as a dynamic forum for intercultural and interlingual communication and an exciting arena for interdisciplinary dialogues, thus enabling us to look beyond the traditionally more static, mechanical and linguistics-oriented views of translation and interpreting. This book appeals to scholars and students interested in translation and interpreting studies and issues of power, ideology, identity in interlingual and intercultural communication.

An Analysis of Verbal and Constructional Meaning Guitar Lesson World

The classic work that redefined the sociology of knowledge and has inspired a generation of philosophers and thinkers. In this seminal book, Peter L. Berger and Thomas Luckmann examine how knowledge forms and how it is preserved and altered within a society. Unlike earlier theorists and philosophers, Berger and Luckmann go beyond intellectual history and focus on commonsense, everyday knowledge—the proverbs, morals, values, and beliefs shared among ordinary people. When first published in 1966, this systematic, theoretical treatise introduced the term social construction, effectively creating a new thought and transforming Western philosophy.

Charlemagne and the Construction of Imperial Authority, 800-1229 Oxford University Press

Stereotypes and the Construction of the Social World explores the complexity of stereotypes, guiding the reader through issues of definition and theoretical explanations from psychology and other disciplines. The book examines why people use stereotypes, which have often been represented as inaccurate, rigid and discriminatory. If that is what they are, then why would people employ such 'faulty' or 'biased' views of others? Whilst this book presents a detailed and comprehensive analysis of the psychological research into the individual use of stereotypes, it also presents this research within its ideological and historical context, revealing the important sociocultural factors in what we mean by 'stereotypes'. From the politics of representation and intergroup power relations, alongside individual social cognitive issues, the book provides a comprehensive and cross-disciplinary account of stereotypes and stereotyping. Featuring a wealth of real-world examples, it will be essential reading for all students and researchers of stereotypes.

The World's Construction Mechanism CRC Press

The interdisciplinarity between the biological and human sciences is here to serve a daring objective: to decipher, by means of a logical chain, the explanatory factors of human trajectories and imbalances between societies and nations. To do this, The World's Construction Mechanism is based on an unprecedented analysis of the dynamics of the human species, combining the contributions of anthropology, archeology, biology, climatology, economics, geography, history and sociology. This book analyzes the roots of societal disharmony and presents ways of realizing a

clear-sighted human project that is in step with the general interest of humanity.

Constructing the World Oxford University Press

Rural Transport Services Constructing the World

Drawing on the perspectives of scholars and researchers from around the world, this book challenges dominant constructions of higher education students. Given the increasing number and diversity of such students, the book offers a timely discussion of the implicit and sometimes subtle ways that they are characterised or defined. Topics vary from the ways that curriculum designers 'imagine' learners, the complex and evolving nature of student identity work, through to newspaper and TV representations of university attendees. Reimagining the Higher Education Student seeks to question the accepted or unquestioned nature of 'being a student' and instead foreground the contradictions and 'messiness' of such ideation. Offering timely insights into the nature of the student experience and providing an understanding of what students may desire from their Higher Education participation, this book covers a range of issues, including: Impressions versus the reality of being a Higher Education student Portrayals of students in various media including newspapers, TV shows and online Generational perspectives on students, and students as family members It is a valuable resource for academics and students both researching and working in higher education, especially those with a focus on identities, their importance and their constructions.

Constructing International Relations in the Arab World Cambridge University Press

You can use this book to design a house for yourself with your family; you can use it to work with your neighbors to improve your town and neighborhood; you can use it to design an office, or a workshop, or a public building. And you can use it to guide you in the actual process of construction. After a ten-year silence, Christopher Alexander and his colleagues at the Center for Environmental Structure are now publishing a major statement in the form of three books which will, in their words, "lay the basis for an entirely new approach to architecture, building and planning, which will we hope replace existing ideas and practices entirely." The three books are *The Timeless Way of Building*, *The Oregon Experiment*, and this book, *A Pattern Language*. At the core of these books is the idea that people should design for themselves their own houses, streets, and communities. This idea may be radical (it implies a radical transformation of the architectural profession) but it comes simply from the observation that most of the wonderful places of the world were not made by architects but by the people. At the core of the books, too, is the point that in designing their environments people always rely on certain "languages," which, like the languages we speak, allow them to articulate and communicate an infinite variety of designs within a forma system which gives them coherence. This book provides a language of this kind. It will enable a person to make a design for almost any kind of building, or any part of the built environment. "Patterns," the units of this language, are answers to design problems (How high should a window sill be? How many stories should a building have? How much space in a neighborhood should be devoted to grass and trees?). More than 250 of the patterns in this pattern language are given: each consists of a problem statement, a discussion of the problem with an illustration, and a solution. As the authors say in their introduction, many of the patterns are archetypal, so deeply rooted in the nature of things that it seems likely that they will be a part of human nature, and human action, as much in five hundred years as they are today.

Guitar Lesson World: The Book SAGE Publications

The contributors contrast this world-polity perspective to other approaches to understanding globalization, including realist and neo-realist analyses in the field of international relations, and world-system theory and interstate competition theory in sociology.

Essays on International Institutionalisation Cambridge University Press

Information Systems Research: Relevant Theory and Informed Practice comprises the edited proceedings of the WG8.2 conference, "Relevant Theory and Informed Practice: Looking Forward from a 20-Year Perspective on IS Research," which was sponsored by IFIP and held in Manchester, England, in July 2004. The conference attracted a record number of high-quality manuscripts, all of which were subjected to a rigorous reviewing process in which four to eight track chairs, associate editors, and reviewers thoughtfully scrutinized papers by the highly regarded as well as the newcomers. No person or idea was considered sacrosanct and no paper made it through this process unscathed. All authors were asked to revise the accepted papers, some more than once; thus, good papers got better. With only 29 percent of the papers accepted, these proceedings are significantly more selective than is typical of many conference proceedings. This volume is organized in 7 sections, with 33 full research papers providing panoramic views and reflections on the Information Systems (IS) discipline followed by papers featuring critical interpretive studies, action research, theoretical perspectives on IS research, and the methods and politics of IS development. Also included are 6 panel descriptions and a new category of "bright idea" position papers, 11 in all, wherein main points are summarized in a pithy and provocative fashion.
