 This concise guide to deep brain stimulation (DBS) outlines a practical approach to the use of this paradigm-shifting therapy for neurologic and psychiatric disorders. Fully revised throughout, the new edition provides extensive information about the

application of DBS to movement disorders, and includes new chapters on DBS to treat epilepsy and psychiatric conditions. With the evolution of surgical techniques for DBS lead implantation, a brand new section focused on interventional MRI approaches is also included. All key aspects of DBS practice are covered, including patient selection, device programming to achieve optimal symptom control, long-term management, and troubleshooting. It is a guide to be kept in the clinic and consulted in the course of managing patients being considered for, or treated with, DBS. With contributions from some of the most experienced clinical leaders in the field, this is a must-have reference guide for any clinician working with DBS patients.

 Movement Disorder Emergencies:

Diagnosis and Treatment provides a fresh and unique approach to what is already a high-profile subspecialty area in clinical neurology. The disorders covered in this volume are standard fare in the field but emphasize the urgencies and emergencies that can occur. One of the very attractive features of the field of movement disorders is that diagnosis is often based on unique visible and sometimes audible phenomenological symptoms and signs. Therefore, in this era of highly sophisticated laboratory and radiological diagnostic tools, the diagnosis of many movement disorders is still largely made in the clinic where pattern recognition is key. Crucial to astute clinical diagnosis is broad clinical experience. In short, you have to have seen one to recognize one! Patients with movement disorders nearly always present as outpatients but, as aptly recognized by Drs. Frucht and Fahn, this may include acute manifestations leading to emergency presentations, often in an emergency room setting, where they are very likely to be unrecognized and therefore poorly managed. The authors define an "emergency" movement disorder as one in which failure to promptly diagnose and treat may result in significant morbidity or mortality. However, they also stress the importance of certain "can't miss" diagnoses such as Wilson's disease, dopa-responsive dystonia, and Whipple's disease in which delayed diagnosis in less emergent situations can lead to slowly evolving and often irreversible neurological damage with tragic consequences.

The Duke of Kylemore knows her as Soraya, London's most celebrated courtesan. Men fight duels to spend an hour in her company. And only he comes close to taming her. Flying in the face of society, he decides to make her his bride; then, she vanishes, seemingly into thin air. Dire circumstances have forced Verity Ashton to barter her innocence and change her name for the sake of her family. There he seduces her anew. Verity spends night after night with him in his bed . . . and though she still dreams of escape and independence, she knows she can never flee the unexpected, unwelcome love for the proud, powerful lover who claims her both body and soul.

In consideration of the many challenges associated with Qatar's continued growth and demographic changes, the government of Qatar is interested in updating its school transportation system (STS). This volume assesses the perspectives of parents and school administrators on Qatar's STS, identifies a vision and goals for the STS, reviews international norms for school transportation, and discusses strategies to achieve the vision and better align Qatar's STS with international norms. The authors articulate four elements of a vision for Qatar's STS: Provide safe, efficient, and high-quality transportation for Qatar's students; support educational options by enabling mobility and access; provide a transportation experience that is supportive of Qatari values and culture; and minimize the impact on traffic

congestion and the environment. The authors recommend 13 strategies to help achieve this vision, such as establishing clearly marked school zones with standardized safety features and establishing standards for licensing and training bus drivers. The authors also provide a preliminary evaluation of several other strategies with less certain costs and benefits, such as changing the composition of the school bus fleet, implementing bus stops, and staggering school start times.

When the official history of twentieth-century Wall Street is written, it will certainly contain more than a few pages on Michael Steinhardt. One of the most successful money managers in the history of "The Street," Steinhardt far outshone his peers by achieving an average annual return of over thirty percent—significantly greater than that of every market benchmark. During his almost thirty-year tenure as a hedge fund manager, he amassed vast wealth for his investors and himself. One dollar invested with Steinhardt Partners L.P., his flagship hedge fund, at its inception in 1967 would have been worth \$462 when he retired from active money management in 1995. No Bull offers an account of some of the investment strategies that drove Michael Steinhardt's historic success as a hedge fund manager including a focus on his skills as an industry analyst and consummate stock picker. He also reveals how his uncanny talent for knowing when to trade against the prevailing market trend—a talent that was not always appreciated by several erstwhile high-profile clients—resulted in many of his greatest successes. Here he provides detailed accounts of some of his most sensational coups—including his momentous decision, in 1981, to stake everything on bonds—and his equally sensational failures, such as his disastrous foray into global macro-trading in the mid-1990s. At the same time, No Bull is the rags-to-riches story of a boy from Bensonhurst and his rise from the streets of Brooklyn to the heights of Wall Street. In a thoroughly engaging narrative, Steinhardt relates the early influences that shaped his attitudes toward life and success, as well as the beginning of his love affair with stock investing. Further, he chronicles his dawning awareness of the need for a purpose in life beyond the acquisition of wealth and how it led to his decision to retire and redirect his energies. We learn about his experiences as the chairman of the Democratic Leadership Council for nearly a decade, as well as his

innovative thinking and ambitious projects to strengthen the Jewish community. The inspiring true story of a Wall Street genius and world-class philanthropist, *No Bull* is an unforgettable read for finance professionals and students of human nature alike. Michael Steinhardt is one of the most successful money managers in the history of Wall Street. He is also widely known for his philanthropic activities, particularly in the Jewish community—most notably as cofounder with Charles Bronfman of Birthright Israel, a program whose mission is to provide a free educational opportunity for every young Jewish person of the Diaspora to visit Israel.

Over the last decade, the considerable progress made in biochemistry, molecular biology, genetics and neuropharmacology has revealed some of the intimate mechanisms of the neurodegenerative disorders. There is increasing evidence linking genetic defects affecting mitochondria to Alzheimer's disease, Parkinson's disease, amyotrophic lateral sclerosis, Huntington's disease and some other neurological disorders. Advances in knowledge are fueled through improved animal models that use mitochondrial toxins, excitotoxins, and transgenic

animals. Therapeutic studies in these models have strengthened the possibility for effective treatments in man. By defining the pathomechanisms, we hope to be in the position to prevent cell death by protecting neurons. Indeed serious preclinical and clinical research is going on in the field of neuroprotection in stroke, Parkinson's disease, epilepsy, demyelinating disorders and dementia. Based on these scientific ideas, the Symposium in honour of Professor Abel Lajtha was organized by the European Society for Clinical Neuropharmacology (ESCNP) and the Danube Symposium for Neurological Sciences in Budapest, Hungary, October 24-25, 2002. Professor Lajtha was born in Budapest in 1922 and his home town is an ideal venue for strengthening the bonds between Western and Eastern European Neuroscientists. Professor Peter Riederer (Wurzburg) held the 2002 special "Dezso Miskolczy Memorial Lecture" in Abel Lajtha's Honour.
