COLON MANN

Manual of Intracytoplasmic Sperm Injection in Human Assisted Reproduction Jaypee Brothers Medical Publishers

Howard T. Odum possessed one of the most innovative minds of the twentieth century. He pioneered the fields of ecological engineering, ecological economics, and environmental accounting, working throughout his life to better understand the interrelationships of energy, environment, and society and their importance to the well-being of humanity and the planet. This volume is a major modernization of Odum's classic work on the significance of power and its role in society, bringing his approach and insight to a whole new generation of students and scholars. For this edition Odum refines his original theories and introduces two new measures: emergy and transformity. These concepts can be used to evaluate and compare systems and their transformation and use of resources by accounting for all the energies and materials that flow in and out and expressing them in equivalent ability to do work. Natural energies such as solar radiation and the cycling of water, carbon, nitrogen, and oxygen are diagrammed in terms of energy and emergy flow. Through this method Odum reveals the similarities between human economic and social systems and the ecosystems of the natural world. In the process, we discover that our survival and prosperity are regulated as much by the laws of energetics as are systems of the physical and chemical world.

Human Reproductive Biology Academic Press

Atlas of Histology of the Juvenile Rat should be of interest to toxicologic pathologists, toxicologists, and other biological scientists who are interested in the histomorphology of juvenile rats. For several decades the laboratory rat has been used extensively in nonclinical toxicology studies designed to detect potential human toxicity of drugs, agrochemicals, industrial chemicals, and environmental hazards. These studies traditionally have involved young adult rats that are 8-10 weeks of age as studies are started. It is becoming increasingly apparent that children and young animals may have different responses to drug/chemical exposures, therefore, regulatory agencies are emphasizing toxicology studies in juvenile animals. While the histologic features of organs from young adult and aged laboratory rats are well known, less is known about the histologic features of organs from juvenile rats. Final histologic maturity of many organs is achieved postnatally, thus immature histologic features must be distinguished from chemical- or drug-related effects. While this postnatal organ development is known to exist as a general concept, detailed information regarding postnatal histologic development is not readily available. The Atlas includes organs that are typically sampled in nonclinical toxicology studies and presents the histologic features at weekly intervals, starting at birth and extending through postnatal day 42. Written and edited by highly experienced, board-certified toxicologic pathologists Includes more than 700 high-resolution microscopic images from organs that are typically examined in safety assessment toxicology studies Detailed figure legends and chapter narratives present the salient features of each organ at each time interval Figures are available for further study via Elsevier's Virtual Microscope, which allows viewing of microscopic images at higher magnification Valuable resource for toxicologic pathologists who are confronted with interpretation of lesions in juvenile rats in situations where age-matched concurrent controls are not available for comparison, e.g., with unscheduled decedents Figures are available for further study on ScienceDirect with Virtual Microscope, which

allows viewing of microscopic images at higher magnification

WHO Classification of Tumours of Female Reproductive Organs Springer Science & Business Media

Human Reproductive BiologyElsevier

Animal Models and Human Reproduction CRC Press

Our knowledge of reproductive biology has increased enormously in recent years on cellular, molecular, and genetic levels, leading to significant breakthroughs that have directly benefitted in vitro fertilization (IVF) and other assisted reproductive technologies (ART) in humans and animal systems. *Animal Models and Human Reproduction* presents a comprehensive reference that reflects the latest scientific research being done in human reproductive biology utilizing domestic animal models. Chapters on canine, equine, cow, pig, frog, and mouse models of reproduction reflect frontier research in placental biology, ovarian function and fertility, non-coding RNAs in gametogenesis, oocyte and embryo metabolism, fertilization, cryopreservation, signal transduction pathways, chromatin dynamics, epigenetics, reproductive aging, and inflammation. Chapters on non-human primate models also highlight recent advancements into such issues as human in vitro fertilization (IVF) and assisted reproductive technologies (ART). This book offers animal scientists, reproductive biology scientists, clinicians and practitioners, invaluable insights into a wide range of issues at the forefront of human reproductive health.

The Hierarchy of Energy Academic Press

Reproductive Technologies in Animals provides the most updated and comprehensive knowledge on the various aspects and applications of reproductive technologies in production animals as well as companion, wild, exotic, and laboratory animals and birds. The text synthesizes historical information and recent discoveries, while dealing with economical and geographical issues related to the implementation of the same technologies. It also presents the effects of reproductive technology implementation on animal welfare and the possible threat of pathogen transmission.

Reproductive Technologies in Animals is an important resource for academics, researchers, professionals in public and private animal business, and students at the undergraduate and graduate levels, as it gives a full and detailed first-hand analysis of all species subjected to the use of reproductive technologies. Provides research from a team of scientists and researchers whose expertise spans all aspects of animal reproductive technologies Addresses the use of reproductive technologies in a wide range of animal species Offers a complete description and historical background for each species described Discusses successes and failure as well as future challenges in reproductive technologies

I Am the Other John Wiley & Sons

The book presents a detailed assessment of the health science of lead and the human health risk assessment models for lead's human health impacts, followed by an account of various regulatory efforts in the United States and elsewhere to eliminate or reduce human toxic exposures to lead. The science of lead as presented here covers releases of lead into the environment, lead's movement through the environment to reach humans who are then exposed, and the spectrum of toxic effects, particularly low-level toxic effects, on the developing central nervous system of the very young child. The section on human health risk assessment deals with quantifying not only the dose-response relationships that underlie toxic responses to lead in sensitive populations but also with the likelihood of toxic responses vis-à-vis environmental lead at some level of exposure. This section includes a treatment of computer models of lead exposure, particularly those that use lead in whole blood as a key measure. Various models convert lead intake via various body compartments into measures of body lead burden. Such measures are then directly related to severity of injury. The final section of the book deals with past and present regulatory efforts to control lead releases into the human environment. Current control efforts present a mixed picture. The most problematic issue is the continued presence of lead paint in older housing and lead in soils of urban and mining industry communities. Comprehensive assessment of the three major facets of the public health problem of lead: the voluminous science, the risk assessment approaches, and approaches to controlling lead as a public health problem. Integration of the above three elements to provide a coherent whole Provides a single source of information that will be extremely valuable to all professionals working in areas impacted by this toxic substance

Donald School Textbook of Human Reproductive & Gynecological Endocrinology Human Reproductive Biology

Are you preparing for the Licensure Examination? Did you just pass your Medical Terminology class? Are you a semi retired healthcare professional? Or you are a patient who is interested in understanding medical terminologies? Healthcare is a part of our daily lives. Sickness and death occur on a daily basis. Because of these occurrences, healthcare professionals are now situated across the globe. The demand for their services are so dynamic that healthcare technology is expanding, and so is the level of competency. Don't be left behind. Review and refresh your medical terminology skills including abbreviations and laboratory values. Changes have occurred since the time you finished your Med Term class. For patients who want to be well informed about their health condition, this is a good book for referencing the healthcare terminologies. This book is designed to review the competency of healthcare professionals in relation to medical terminologies. Tests are located at the end of every chapter. The chapters in this book are: Chapter 1 Elements of A Medical Terminology Chapter 2 Prefixes Chapter 3 Suffixes Chapter 4 General Terminologies for the Human Body Chapter 5 Skeletal System Chapter 6 Muscular System Chapter 7 Cardiovascular System Chapter 8 Hematological System Chapter 9 Respiratory System Chapter 10 Digestive System Chapter 11 Nervous System Chapter 12 Urinary System Chapter 13 Female Reproductive System Chapter 14 Male Reproductive System Chapter 15 Lymphatic System Chapter 16 Integumentary System Chapter 17 Endocrinary System Chapter 18 Sense Organs Chapter 19 Psychiatry Chapter 20 Laboratory Values Chapter 21 Medical Specialists Chapter 22 Medical Abbreviations

Principles and Methods Harvard University Press

Human genetic steroid defects have profound impacts on the reproductive potential of affected individuals. Fortunately, advances in our understanding of the genetic and physiologic nuances of these disorders have led to the successful restoration of fertility for patients with several such diseases. In this chapter, the genetic steroid disorders will be explored with respect to their effects on human reproduction, the mechanisms whereby fertility is limited or precluded will be described, and existing as well as emerging therapies for genetic steroid enzyme deficiencies outlined.

Biobanks and Tissue Research Elsevier Inc. Chapters

WHO Classification of Tumours of Female Reproductive Organs is the sixth volume in the 4th Edition of the WHO series on histological and genetic

typing of human tumours. This authoritative, concise reference book provides an international standard for oncologists and pathologists and will serve as an indispensable guide for use in the design of studies monitoring response to therapy and clinical outcome. Diagnostic criteria, pathological features, and associated genetic alterations are described in a strictly disease-oriented manner. Sections on all recognized neoplasms and their variants include new ICD-O codes, epidemiology, clinical features, macroscopy, pathology, genetics, and prognosis and predictive factors. The book, prepared by 91 authors from 19 countries, contains more than 400 colour images and tables, and more than 2100 references

Scientific and Medical Aspects of Human Reproductive Cloning Columbia University Press

The research field of biobanks and tissue research is highly promising. Many projects around the globe are involved in the collection of human tissue and health data for research purposes. These initiatives are driven by the perspective of decisive breakthroughs in the knowledge of the genetic pathways involved in widespread diseases. However, there are considerable ethical and legal challenges to be considered as well. These challenges encompass the use of body material for research purposes, the misuse of genetic and other health data by third parties, trust in science and medicine, concerns regarding privacy, use of genetic data for forensic applications by the state and the police, and regulatory issues. This volume is divided into three parts: the inclusion of the public, the rights of donors and patients, examples and recommendations for the future of tissue research. It presents a comprehensive overview of the most important topics in the field by renowned scholars in medical ethics and biolaw.

Molecular Biology of the Male Reproductive System Cambridge University Press

Infertility affects approximately 15% of couples of reproductive age. High live birth rates rely on many advanced technologies in infertility treatment, including more accurate clinical diagnosis and patient management as well as state-of-the-art in vitro fertilization (IVF) technologies. This book discusses infertility and infertility treatments such as embryo implantation, non-invasive preimplantation genetic diagnosis (PGT), oocyte cryopreservation, cryopreservation of small numbers of sperm, and embryo culture technologies. It delivers new information and data valuable to clinicians, embryologists, and others in infertility treatment.

Reproductive Technologies in Animals Kaplan Publishing

Clinical Ethics at the Crossroads of Genetic and Reproductive Technologies offers thorough discussions on preconception carrier screening, genetic engineering and the use of CRISPR gene editing, mitochondrial gene replacement therapy, sex selection, predictive testing, secondary findings, embryo reduction and the moral status of the embryo, genetic enhancement, and the sharing of genetic data. Chapter contributions from leading bioethicists and clinicians encourage a global, holistic perspective on applied challenges and the moral questions relating the implementation of genetic reproductive technology. The book is an ideal resource for practitioners, regulators, lawmakers, clinical researchers, genetic counselors and graduate and medical students. As the Human Genome Project has triggered a technological revolution that has influenced nearly every field of medicine, including reproductive medicine, obstetrics, gynecology, andrology, prenatal genetic testing, and gene therapy, this book presents a timely resource. Provides practical analysis of the ethical issues raised by cutting-edge techniques and recent advances in prenatal and reproductive genetics Contains contributions from leading bioethicists and clinicians who offer a global, holistic perspective on applied challenges and moral questions relating to genetic and genomic reproductive technology Discusses preconception carrier screening, genetic engineering and the use of CRISPR gene editing, mitochondrial gene replacement therapy, ethical issues, and more

Environment, Power, and Society for the Twenty-First Century BoD - Books on Demand

Written by experts in their respective fields, this book reviews the expanding knowledge concerning the mechanisms regulating male reproduction at the molecular and cellular levels. It covers the development of the testes and regulatory controls for spermatogenesis and steroidogenesis, and it considers aspects of Sertoli cell function. Areas of emphasis include communication between the various cell types involved in reproduction by hormone and growth factors and the mechanisms by which these factors regulate gene expression. A number of mammalian systems, including humans, are covered. The carefully selected authors provide a clear synopsis of the concepts in each area as well as the latest references, enabling the reader to investigate the topic further. This book is of interest to those seeking an understanding of the regulatory mechanisms in male reproduction and is written for the graduate and postgraduate levels. Key Features * Provides up-to-date reviews of the molecular and cellular biology of male reproduction * Includes chapters on the developmental biology of the testes * Links conventional hormonal control of testicular function with the evolving role of growth factors and proto-oncogenes

A Guide to Reproduction National Academies Press

Easy to read, well organized, and focused on high-yield content, *Human Histology*, 5th Edition, features concise, up-to-date coverage of the core knowledge in this complex field. Ideal for students in all areas of health care, this revised edition is aligned with recent developments in integrated and problem-based learning, providing rapid access to relevant, practical knowledge in histology. It provides students with opportunities to make important connections between histological knowledge, cell biology, anatomy, clinical understanding, and assessment. Features an easy-to-navigate, full-colour layout that includes summary headings, readable text, quick-reference tables, and key facts – all highlighted by nearly 900 clear illustrations, photos, and graphics throughout. Covers the latest concepts and advances in histology including developments in the primary cilium, the nuclear pore, extracellular matrix components, dendritic spines, subsets of astrocytes, haematopoiesis, classification of cells in the immune system, macrophage subsets, and much more. Includes NEW self-assessment questions. Provides just the right amount of detail for maximum readability and retention. Highlights key laboratory, clinical, and high-level scientific material in boxes. Presents advanced concepts such as the molecular and functional relevance of histological features. Provides review material in the book and online, self-assessment questions plus 180 additional review questions online. Evolve Instructor Resources, including a downloadable image and test bank, are available to instructors through their Elsevier sales rep or via request at: <https://evolve.elsevier.com>

Clinical Ethics at the Crossroads of Genetic and Reproductive Technologies Academic Press

This acclaimed text has been fully revised and updated, now incorporating issues including aging of the reproductive system, and updates on the chapters on conception and Gamete Transport and Fertilization, and Pregnancy. *Human Reproductive Biology*, Third Edition emphasizes the biological and biomedical aspects of human reproduction, explains advances in reproductive science and discusses the choices and concerns of today.

Generously illustrated in full color, the text provides current information about human reproductive anatomy and physiology. The ideal book for courses on human reproductive biology - includes chapter introductions, sidebars on related topics of interest, chapter summaries and suggestions for further reading. All material completely updated with the latest research results, methods, and topics now organized to facilitate logical presentation of topics. New chapters on Reproductive Senescence, Conception: Gamete Transport, Fertilization, Pregnancy: Maternal Aspects and Pregnancy: Fetal Development. Full color illustrations.

Reproductomics John Wiley & Sons

Recent advances in genomic and omics analysis have triggered a revolution affecting nearly every field of medicine, including reproductive medicine, obstetrics, gynecology, andrology, and infertility treatment. *Reproductomics: The -Omics Revolution and Its Impact on Human Reproductive Medicine* demonstrates how various omics technologies are already aiding fertility specialists and clinicians in characterizing patients, counseling couples towards pregnancy success, informing embryo selection, and supporting many other positive outcomes. A diverse range of chapters from international experts examine the complex relationship between genomics, transcriptomics, proteomics, and metabolomics and their role in human reproduction, identifying molecular factors of clinical significance. With this book Editors Jaime Gosálvez and José A. Horcajadas have provided researchers and clinicians with a strong foundation for a new era of personalized reproductive medicine. Thoroughly discusses how genomics and other omics approaches aid clinicians in various areas of reproductive medicine. Identifies specific genomic and molecular factors of translational value in treating infertility and analyzing patient data. Features chapter contributions by leading international experts.

Social Issues and Human Concerns Rowman & Littlefield

Human Reproductive and Prenatal Genetics presents the latest material from a detailed molecular, cellular and translational perspective. Considering its timeliness and potential international impact, this all-inclusive and authoritative work is ideal for researchers, students, and clinicians worldwide. Currently, there are no comprehensive books covering the field of human reproductive and prenatal genetics. As such, this book aims to be among the largest and most useful references available. Features chapter contributions from leading international scientists and clinicians. Provides in-depth coverage of key topics in human reproductive and prenatal genetics, including genetic controls, fertilization and implantation, in vitro culture of the human embryo for the study of post-implantation development, and more. Identifies how researchers and clinicians can implement the latest genetic, epigenetic, and -omics based approaches.

Basic Concepts World Health Organization

This book gives an overview of the revolutionary advances in stem cell science that may potentially impact human reproductive medicine. The contents cover the production and regeneration of female and male germ cells, trophoblasts, and endometrium from human embryonic and adult stem cells. New developments in hESC derivation that will impact clinical use are covered and cutting-edge technologies such as reprogramming, nuclear transfer, and imprinting are addressed in relation to reproductive medicine. There is a tremendous thirst for knowledge about this topic and this will be one of the first books to address the key issues specifically for the reproductive medicine market.

The End of Sex and the Future of Human Reproduction Academic Press

Human Reproductive Biology focuses on the processes, concerns, and trends in human reproduction. Divided into four parts with 19 chapters, the book starts by tracing the history of human reproduction biology and the questions and choices involved. The first part focuses on the male and female reproductive systems. The text notes the different organs involved in reproduction, including the penis, scrotum, vagina, oviducts, and mammary glands. The book discusses sexual development and differentiation, particularly noting the variance of sex ducts and glands, external genitalia, and disorders of sexual development and determination. The text also looks at puberty. Concerns include gonadal changes from birth to puberty; mechanisms that influence puberty; and puberty and psychosocial adjustment. The second part deals with menstrual cycle, fertilization, pregnancy, labor, and birth. Some of the concerns include length of menstrual cycle; absence of menstruation; transport of sperm and ovum in the oviduct; and semen release. The text also highlights labor and birthing processes as well as the relationship of neonates and parents. The third part looks at the medical aspects of human reproduction, infertility, and sexually transmitted diseases. Concerns include contraception, abortion, herpes genitalis, and vaginitis. The text folds with discussions on human sexual behavior, population growth, and family planning. Concerns include sexual dysfunction; the effects of overpopulation; and population control. The book is a vital source of data for readers interested in human reproduction.
