Radar Signal Processing Mit Lincoln Laboratory In the early 1950s Lincoln Laboratory participated in the first application of digital technology to radar signal processing. The Semi-Automatic Ground Environment (SAGE) Air Defense System was under development, and there was a need to transmit target information from the radars over narrow-bandwidth telephone lines to the direction centers. Radar

Signal Processing - MIT Lincoln Laboratory focused high-resolution radar imagery was a challenge in its own right. Drawing on Lincoln Laboratory's experience with the Radar Open Systems Architecture (ROSA), the HUSIR signal processing equipment is ROSA-based with modifications for use at W-band frequencies (92-100 GHz, or millimeter-wave, 3 mm wavelength).
