Whether it's practical DIY home-improvement tips, gadgets and digital technology, information on the newest cars or the latest breakthroughs in science -- PM is the ultimate guide to our high-tech lifestyle.

Plastics in Automobiles

Lincoln's heritage is as rich as that of any car built anywhere in the world, and more impressive than all but a few. Generations of Americans have known it as the Car of Presidents; since the days of Franklin Roosevelt, the White House has exhibited a marked preference for Lincolns. This comprehensive, illustrated history describes in detail the successes and failures of the Lincoln from World War II up to the present-day Aviator. It discusses the forces in the market and in Ford Motor Company that have affected the Lincoln, and is a must read for anyone interested in this classic marque.

Automotive News

The 1973 oil crisis forced the American automotive industry into a period of dramatic change, marked by stiff foreign competition, tougher product regulations and suddenly altered consumer demand. With gas prices soaring and the economy in a veritable tailspin, muscle cars and the massive "need-for-speed" engines of the late '60s were out, and fuel efficient compacts were in. By 1980, American manufacturers were churning out some of the most feature laden, yet smallest and most fuel efficient cars they had ever built. This exhaustive reference work details every model from each of the major American manufacturers from model years 1973 through 1980, including various "captive imports" (e.g. Dodge's Colt, built by Mitsubishi.) Within each

model year, it reports on each manufacturer's significant news and details every model offered: its specifications, powertrain offerings, prices, standard features, major options, and production figures, among other facts. The work is heavily illustrated with approximately 1,300 photographs.
