In Programs and Practices contributors describe and critique various ways that writing across the curriculum (WAC) has been incorporated into schoolwide, districtwide, and statewide programs. WAC efforts, which most often begin with small groups of teachers working in a limited number of classrooms, can and often do expand and become the catalyst for systemic change. In these pages readers will find the philosophical foundations for WAC programs and numerous specific classroom applications that provide the explanatory power of practical experience. In addition teachers and administrators will discover ways others are nurturing WAC by creating environments in which WAC becomes central to an institution's educational mission. They will also discover how individual schools, school districts, and state agencies have begun to institutionalize WAC.

In the 1950s, East Central Florida underwent a vast transformation with the creation of the American space program. The sleepy fishing communities stretching from Titusville to Melbourne became home to an army of engineers, rocket scientists, and technicians who would soon take Florida and the nation into the missile age. With no opportunities for advanced study nearby, a handful of determined men and women launched Brevard Engineering College in 1958. In 1966, Florida's secretary of state approved the college's petition to change its name to Florida Institute of Technology. In its short history, Florida Tech has overcome formidable hurdles and succeeded in winning a place in the top ranks of scientific and technological universities. A college on the rise, Florida Tech has not only a bright future, but a rich and colorful history that has been captured in striking

photographs. The exciting story of "Countdown College"-from the lift-off of Bumper 8 in 1950, which launched the space program in Florida, to the most recent high-tech additions to campus facilities-is the subject of this captivating new pictorial history.
