The Human Genome
Biologists can analyze human chromosomes by looking at a karyotype. A karyotype is a picture of the chromosomes from a cell arranged in homologous pairs. Humans have 46 chromosomes. Two of these chromosomes, X and Y, are the sex chromosomes. Females have two X chromosomes (XX). Males have one X and one Y chromosome (XY). Chapter 14 The Human Genome Summary - Henriksen Science chapter 14: Human Genome. Which of the following are shown in a karyotype?
a. homologous chromosomes
b. sex chromosomes
c. autosomes
d. all of the above.
What is the probability that a

human sperm cell will carry an X chromosome?
a. 0 percent
b. 25 percent
c. 50 percent
Chapter 14 The Human Genome What combination of sex chromosomes produces a human female? The combination of two x sex chromosomes are what produce a human female.
