Object Oriented Programming Using JAVA - OOPJ Study ... Object-oriented programming (OOP) languages are designed to overcome these problems. The basic unit of OOP is a class, which encapsulates both the static properties and dynamic operations within a "box", and specifies the

public interface for using these boxes. Since classes are well-encapsulated, it is easier to reuse these classes.

OOP Basics - Java Programming Tutorial

A class in Java or any other Object-oriented Language is a blueprint for objects to follow a specific schema defined in the class. Classes define the behavior for objects of its type. It represents a collection of properties (data and functions) for all its objects. It supports a template for creating objects which bind code and data.

Java Class and

Object: Object-Oriented Programming Languages like Java are object oriented. Programming in such a language is called object-oriented programming (OOP), and it allows computer programmers to implement an object-oriented design as a working system. Languages like C, on the other hand, are procedural, so programming tends to be action oriented.
