An Introduction to Political Sociology University of Chicago Press

Power is the central organizing principle of all social life, from culture and education to stratification and taste. And there is no more prominent name in the analysis of power than that of noted sociologist Pierre Bourdieu. Throughout his career, Bourdieu challenged the commonly held view that symbolic power—the power to dominate—is solely symbolic. He emphasized that symbolic power helps create and maintain social hierarchies, which form the very bedrock of political life. By the time of his death in 2002, Bourdieu had become a leading public intellectual, and his argument about the more subtle and influential ways that cultural resources and symbolic categories prevail in power arrangements and practices had gained broad recognition. In *Symbolic Power, Politics, and Intellectuals*, David L. Swartz delves deeply into Bourdieu's work to show how central—but often overlooked—power and politics are to an understanding of sociology. Arguing that power and politics stand at the core of Bourdieu's sociology, Swartz illuminates Bourdieu's political project for the social sciences, as well as Bourdieu's own political activism, explaining how sociology is not just science but also a crucial form of political engagement.

The Rise of Digital Repression Routledge

Power, Politics and Society: An Introduction to Political Sociology discusses how sociologists have organized the study of politics into conceptual frameworks, and how each of these frameworks foster a sociological perspective on power and politics in society. This includes discussing how these frameworks can be applied to understanding current issues and other "real life" aspects of politics. The authors connect with students by engaging them in activities where they complete their own applications of theory, hypothesis testing, and forms of inquiry.

AI has unparalleled transformative potential to reshape society, our economies and our working lives, but without legal scrutiny,

international oversight and public debate, we are sleepwalking into a future written by algorithms which encode racist, sexist and classist biases into our daily lives &- an issue that requires systemic political and cultural change to productively address. Leading privacy expert Ivana Bartoletti exposes the reality of the AI revolution, from the low-paid workers who toil to train algorithms to recognise cancerous polyps, to the rise of techno-racism and techno-chauvinism and the symbiotic relationship between AI and right wing populism. *An Artificial Revolution* is an essential primer to understand the intersection of technology and geopolitical forces shaping the future of civilisation. •

Endorsements confirmed from leading UK political figures including David Lammy MP, Yvette Cooper MP, Paul Mason, Frances O'Grady and Ayesha Hazarika • A primer for anyone who is interested to learn more about the relation between AI and ethics, data and privacy, corporate power, politics and tech • Ivana is a sought-after commentator who has appeared on flagship news programmes on the BBC, Sky and other major broadcasters as a privacy and AI ethics expert, who also speaks at conferences around the world on AI and privacy

The world of development thinkers and practitioners is abuzz with

a new lexicon: the idea of "the nexus" between water, food, and energy which is intuitively compelling. It promises better integration of multiple sectoral elements, a better transition to greener economies, and sustainable development. However, there appears to be little agreement on its precise meaning, whether it only complements existing environmental governance approaches or how it can be enhanced in national contexts. One current approach to the nexus treats it as a risk and security matter while another treats it within economic rationality addressing externalities across sector. A third perspective acknowledges it as a fundamentally political process requiring negotiation amongst different actors with distinct perceptions, interests, and practices. This perspective highlights the fact that technical solutions for improving coherence within the nexus may have unintended and negative impacts in other policy areas, such as poverty alleviation and education. *The Water-Food-Energy Nexus: Power, Politics and Justice* lays out the managerial-technical definitions of the nexus and challenges these conceptions by bringing to the forefront the politics of the nexus, around two key dimensions - a dynamic understanding of water-food-energy systems, and a normative positioning around nexus debates, in particular around social justice. The authors argue that a shift in nexus governance is required towards approaches where limits to control are acknowledged, and more reflexive/plural strategies adopted. This book will be of interest to academic researchers, policy makers, and practitioners in the fields of international development studies, environmental politics, and science and technology studies, as well as international relations.

No single book has encompassed the vast scope of Edward Said's erudition quite like *Power, Politics and Culture* - a collection of his interviews from the last three decades. In these twenty-nine interviews, Said addresses everything from Palestine to Pavarotti, from his nomadic upbringing under colonial rule to his politically active and often controversial life in America, and reflects on Austen, Beckett, Conrad, Naipaul, Mahfouz and Rushdie as well as fellow critics Bloom, Derrida and Foucault. Said speaks here with his usual candour, acuity and eloquence - confirming that he was

in his lifetime among the truly most important intellects of our century.

This edited collection looks at the emerging relationship between politics and economics. The analysis of power relations - traditionally the focus of political science - is becoming increasingly important to economists in order to understand concepts such as the 'contested nature' of market exchanges. These papers examine power relations in the firm and the market place and offer an economic perspective of political relations. The book is divided into three sections: * politics and power in economic organizations * the economic analysis of political organizations * politics, economics and social change The final section considers how a combination of economic and political tools can be used effectively to analyse social change.

The Cultural Dimensions of Authority SAGE

Aid Power and Politics delves into the political roots of aid policy, demonstrating how and why governments across the world use aid for global influence, and exploring the role it plays in present-day global governance and international relations. In reconsidering aid as part of international relations, the book argues that the interplay between domestic and international development policy works in both directions, with individual countries having the capacity to shape global issues, whilst at the same time, global agreements and trends, in turn, shape the political behaviour of individual countries. Starting with the background of aid policy and international relations, the book goes on to explore the behaviour of both traditional and emerging donors (the US, the UK, the Nordic countries, Japan, Spain, Hungary, Brazil, and the European Union), and then finally looks at some big international agendas which have influenced donors, from the liberal consensus on democracy and good governance, to gender equality and global health. *Aid Power and Politics* will be an important read for international development students, researchers, practitioners and policy makers, and for anyone who has ever wondered why it is that countries spend so much money on the well-being of non-citizens outside their borders.

In *Landscapes of Power* Dana E. Powell examines the rise and fall of the controversial Desert Rock Power Plant initiative in New

Mexico to trace the political conflicts surrounding native sovereignty and contemporary energy development on Navajo (Diné) Nation land. Powell's historical and ethnographic account shows how the coal-fired power plant project's defeat provided the basis for redefining the legacies of colonialism, mineral extraction, and environmentalism. Examining the labor of activists, artists, politicians, elders, technicians, and others, Powell emphasizes the generative potential of Navajo resistance to articulate a vision of autonomy in the face of twenty-first-century colonial conditions. Ultimately, Powell situates local Navajo struggles over energy technology and infrastructure within broader sociocultural life, debates over global climate change, and tribal, federal, and global politics of extraction.

This account of state-systems, which derives not from theoretical models but from the study of state-systems that have actually existed, emphasizes their moral or normative bases. It argues that a system of states presupposes a common culture. The essays deal with the concept of systems of states: the state-systems of Hellas; Hellas and Persia; the geographical and chronological boundaries of the modern states-system; international legitimacy; and triangles and duels. An introductory chapter by Hedley Bull draws the essays together and provides an account of Martin Wright's life and thought.

The international relations of the Middle East have long been dominated by uncertainty and conflict. External intervention, interstate war, political upheaval and interethnic violence are compounded by the vagaries of oil prices and the claims of military, nationalist and religious movements. The purpose of this book is to set this region and its conflicts in context, providing on the one hand a historical introduction to its character and problems, and on the other a reasoned analysis of its politics. In an engagement with both the study of the Middle East and the theoretical analysis of international relations, the author, who is one of the best known and most authoritative scholars writing on the region today, offers a compelling and original interpretation. Written in a clear, accessible and interactive style, the book is designed for students, policymakers, and the general reader.

This book explains why the European Union (EU) Member States - in response to the euro crisis - agreed to establish banking union, despite previous objections, and why they chose its hybrid institutional design. Analysing its establishment from 2012 to 2020, the book offers a comprehensive view of the preferences of the Member States and EU institutions, as well as of the negotiation dynamics and latest developments in the three pillars of banking union, namely, the Single Supervisory Mechanism, the Single Resolution Mechanism and the common backstop, and the European deposit insurance scheme. Furthermore, empirically, the book looks beyond the usual focus of the northern and southern coalition of states to underline the influence of powerful smaller Member States in the intergovernmental bargaining process. Adopting a range of theoretical perspectives, it questions the solidity of the northern versus southern camps and reveals distinctive and particular positioning from individual countries during the process. This book will be of key interest to scholars and students of European financial market regulation, European economic governance, EU institutions, European integration theory and EU politics more broadly.

Social power, defined as "the ability to set standards, create norms and values that are deemed legitimate and desirable, without resorting to coercion or payment", is a central part of contemporary international politics. This text introduces and defines the concept of social power and considers how it works in international politics. It demonstrates how social power is a complex phenomenon that manifests itself in a wide variety of ways and circumstances, particularly in culture, institutions, law, and the media. Providing a global perspective on the role of social power from the EU, the US, the Middle East, and China, this book: Focuses on the key aspects of social power: centrality, complexity, and comprehensiveness. Examines the complex relationship between soft and hard power, the role of the media, and new communications technologies. Explores the interplay between state and non-state actors in framing the public discourse, setting the agenda, molding identities, and ultimately determining the outcome of policy processes. Features a broad range of international case studies and addresses issues including: culture and pop culture, media, public diplomacy, and branding. With particular focus on the social power of non-state

actors, such as non-governmental organizations, the media, and consumers, *Social Power in International Politics* offers a thought-provoking new perspective on how power is exercised in the complex reality of the contemporary world. It will be of particular interest to students and scholars of international relations, political science, and media and communications studies.

Power, Politics and the Trap of Credible Commitments A&C Black How can we rethink ideas of policy failure to consider its paradoxes and contradictions as a starting point for more hopeful democratic encounters? Offering a provocative and innovative theorisation of governance as relational politics, the central argument of *Power, Politics and the Emotions* is that there are sets of affective dynamics which complicate the already materially and symbolically contested terrain of policy-making. This relational politics is Shona Hunter's starting point for a more hopeful, but realistic understanding of the limits and possibilities enacted through contemporary governing processes. Through this idea Hunter prioritises the everyday lived enactments of policy as a means to understand the state as a more differentiated and changeable entity than is often allowed for in current critiques of neoliberalism. But Hunter reminds us that focusing on lived realities demands a melancholic confrontation with pain, and the risks of social and physical death and violence lived through the contemporary neoliberal state. This is a state characterised by the ascendancy of neoliberal whiteness; a state where no one is innocent and we are all responsible for the multiple intersecting exclusionary practices creating its unequal social orderings. The only way to struggle through the central paradox of governance to produce something different is to accept this troubling interdependence between resistance and reproduction and between hope and loss. Analysing the everyday processes of this relational politics through original empirical studies in health, social care and education the book develops an innovative interdisciplinary theoretical synthesis which engages with and extends work in political science, cultural theory, critical race and

feminist analysis, critical psychoanalysis and post-material sociology.

Who Rules America Now? Pearson Higher Ed

This widely-praised book identified peaceful struggle as a key phenomenon in international politics a year before the revolutions in Tunisia and Egypt confirmed its central argument. Civil resistance - non-violent action against such challenges as dictatorial rule, racial discrimination and foreign military occupation - is a significant but inadequately understood feature of world politics. Especially through the peaceful revolutions of 1989, and the developments in the Arab world since December 2010, it has helped to shape the world we live in. *Civil Resistance and Power Politics* covers most of the leading cases, including the actions master-minded by Gandhi, the US civil rights struggle in the 1960s, the Islamic revolution in Iran in 1979, the 'people power' revolt in the Philippines in the 1980s, the campaigns against apartheid in South Africa, the various movements contributing to the collapse of the Soviet Bloc in 1989-91, and, in this century, the 'colour revolutions' in Georgia and Ukraine. The chapters, written by leading experts, are richly descriptive and analytically rigorous. This book addresses the complex interrelationship between civil resistance and other dimensions of power. It explores the question of whether civil resistance should be seen as potentially replacing violence completely, or as a phenomenon that operates in conjunction with, and modification of, power politics. It looks at cases where campaigns were repressed, including China in 1989 and Burma in 2007. It notes that in several instances, including Northern Ireland, Kosovo and Georgia, civil resistance movements were followed by the outbreak of armed conflict. It also includes a chapter with new material from Russian archives showing how the Soviet leadership responded to civil resistance, and a comprehensive bibliographical essay. Illustrated throughout with a remarkable selection of photographs, this uniquely wide-ranging and path-breaking study is written in an accessible style and is intended for the general reader as well as for students of Modern History, Politics, Sociology, and International Relations.

Racism and imperialism are the twin forces that propelled the course of the United States in the world in the early twentieth century and in turn affected the way that diplomatic history and

international relations were taught and understood in the American academy. Evolutionary theory, social Darwinism, and racial anthropology had been dominant doctrines in international relations from its beginnings; racist attitudes informed research priorities and were embedded in newly formed professional organizations. In *White World Order, Black Power Politics*, Robert Vitalis recovers the arguments, texts, and institution building of an extraordinary group of professors at Howard University, including Alain Locke, Ralph Bunche, Rayford Logan, Eric Williams, and Merze Tate, who was the first black female professor of political science in the country. Within the rigidly segregated profession, the "Howard School of International Relations" represented the most important center of opposition to racism and the focal point for theorizing feasible alternatives to dependency and domination for Africans and African Americans through the early 1960s. Vitalis pairs the contributions of white and black scholars to reconstitute forgotten historical dialogues and show the critical role played by race in the formation of international relations.

In a major new book, Lucian Pye reconceptualizes Asian political development as a product of cultural attitudes about power and authority. He contrasts the great traditions of Confucian East Asia with the Southeast Asian cultures and the South Asian traditions of Hinduism and Islam, and explores the national differences within these larger civilizations. Breaking with modern political theory, Pye believes that power differs profoundly from one culture to another. In Asia the masses of the people are group-oriented and respectful of authority, while their leaders are more concerned with dignity and upholding collective pride than with problem-solving. As culture decides the course of political development, Pye shows how Asian societies, confronted with the task of setting up modern nation-states, respond by fashioning paternalistic forms of power that satisfy their deep psychological craving for security. This new paternalism may appear essentially authoritarian to Western eyes, but Pye maintains that it is a valid response to the people's needs and will ensure community solidarity and strong group loyalties. He predicts that we are certain to see emerging from Asia's accelerating transformation some new version of modern society that may avoid many of the forms of tension common to Western civilization but may also

produce a whole new set of problems. This book revitalizes Asian political studies on a plane that comprehends the large differences between Asia and the West and at the same time is

sensitive to the subtle variations among the many Asian cultures. Its comparative perspective will provide indispensable insights to anyone who wishes to think more deeply about the modern Asian states.
