Armed Services Vocational Aptitude Battery McGraw Hill Professional

The book that every dean and department chair needs to survive—and thrive—in the twenty-first-century university. First released in 2006, *The College Administrator's Survival Guide* has served as the bible for a generation of provosts, deans, department chairs, and program directors. Shrewd administrators have returned to the guide time and again for C. K. Gunsalus's advice on handling complaints, negotiating disagreements, and dealing with difficult personalities. Now, in this revised and updated edition, Gunsalus guides rookie administrators and seasoned veterans through today's most pressing higher-education challenges. These days academic leaders must respond to heightened demands for transparency and openness. These demands are intensified by social media, which increases the visibility of university conflicts and can foster widespread misinformation about campus affairs. Meanwhile, institutions have become flatter, with administrators expected to work more closely with faculty, students, and a range of professionals even as support staffs shrink. Between the ever-replenishing inbox, the integration of often-exasperating management systems into every dimension of academic life, and the new demands of remote learning, deans and department heads are juggling more balls than ever before. Tightening budgets have already forced

administrators into more difficult choices and, in the wake of COVID-19, there will be no relief from financial constraints. From #metoo to partisan battles over curricula and funding, college and university leaders need more savvy and greater sensitivity than ever. What hasn't changed are the challenges of dealing with difficult people and the importance of creating and maintaining environments in which faculty, staff, and students have the support they need to do their best work. The College Administrator's Survival Guide provides the tools to keep cool and get the job done.

The decade ahead will test the nation's nearly 4 million nurses in new and complex ways. Nurses live and work at the intersection of health, education, and communities. Nurses work in a wide array of settings and practice at a range of professional levels. They are often the first and most frequent line of contact with people of all backgrounds and experiences seeking care and they represent the largest of the health care professions. A nation cannot fully thrive until everyone - no matter who they are, where they live, or how much money they make - can live their healthiest possible life, and helping people live their healthiest life is and has always been the essential role of nurses. Nurses have a critical role to play in achieving the goal of health equity, but they need robust education, supportive work environments, and autonomy.

Accordingly, at the request of the Robert Wood Johnson Foundation, on behalf of the National Academy of Medicine, an ad hoc committee under the auspices of the National Academies of Sciences, Engineering, and Medicine conducted a study aimed at envisioning and charting a path forward for the nursing profession to help reduce inequities in people's ability to achieve their full health potential. The ultimate goal is the achievement of health equity in the United States built on strengthened nursing capacity and expertise. By leveraging these attributes, nursing will help to create and contribute comprehensively to equitable public

health and health care systems that are designed to work for everyone. The Future of Nursing 2020-2030: Charting a Path to Achieve Health Equity explores how nurses can work to reduce health disparities and promote equity, while keeping costs at bay, utilizing technology, and maintaining patient and family-focused care into 2030. This work builds on the foundation set out by The Future of Nursing: Leading Change, Advancing Health (2011) report.

The Spirit of Nursing is filled with stories from more than 40 authors who have been inspired by their choice of career. Collectively, they boast 1,091 years of practice, diverse certifications, and numerous degrees. Some have just begun their practice and others have worked as nurses for half a century or

more. Read how we have earned the true credentials needed to provide care for strangers, family members, and each other. Learn how we have earned the academic and honorary titles required to lead each other in our profession. The stories we have collected here cover the moment each contributor knew he or she was to become a nurse, what was learned (and what was not) in nursing school, and unforgettable patients and colleagues. But this book is about more than the sum of all of the parts that make up our nursing trajectories. It is about the process of becoming and being a nursing colleague. Filled with professionals who have earned their distinction as leaders in practice and healers in their communities, it is rumination on what it means to care. It is also a thank you to a line of work that has given us so much.
