 The practice of building software is a “new kid on the block” technology. Though it may not seem this way for those who have been in the field for most of their careers, in the overall scheme of professions, software builders are relative “newbies.” In the short history of the software field, a lot of facts have been identified, and a lot of fallacies promulgated. Those facts and fallacies are what this book is about. There's a problem

with those facts—and, as you might imagine, those fallacies. Many of these fundamentally important facts are learned by a software engineer, but over the short lifespan of the software field, all too many of them have been forgotten. While reading *Facts and Fallacies of Software Engineering*, you may experience moments of “Oh, yes, I had forgotten that,” alongside some “Is that really true?” thoughts. The author of this book doesn't shy away from controversy. In fact, each

of the facts and fallacies is accompanied by a discussion of whatever controversy envelops it. You may find yourself agreeing with a lot of the facts and fallacies, yet emotionally disturbed by a few of them! Whether you agree or disagree, you will learn why the author has been called “the premier curmudgeon of software practice.” These facts and fallacies are fundamental to the software building field—forget or neglect them at your peril! The Exceptional Economy

The frequency and severity of disasters over the last few decades have presented unprecedented challenges for communities across the United States. In 2005, Hurricane Katrina exposed

the complexity and breadth of a deadly combination of existing community stressors, aging infrastructure, and a powerful natural hazard. In many ways, the devastation of Hurricane Katrina was a turning point for understanding and managing disasters, as well as related plan making and policy formulation. It brought the phrase "community resilience" into the lexicon of disaster management. Building and Measuring Community Resilience: Actions for Communities

and the Gulf Research Program summarizes the existing portfolio of relevant or related resilience measurement efforts and notes gaps and challenges associated with them. It describes how some communities build and measure resilience and offers four key actions that communities could take to build and measure their resilience in order to address gaps identified in current community resilience measurement efforts. This report also provides

recommendations to the Gulf Research Program to build and measure resilience in the Gulf of Mexico region. Evolution of U.S.

Regulation and the Standard-Setting Process for Financial Reporting: 1930s to the Present surveys and explains the evolution of the stream of events and developments in the regulation and standard setting that have

set the requirements for companies' financial reporting in the U.S. capital market. Particular attention is given to instances in which the SEC, as regulator, has either been in disagreement with the private-sector accounting standard setter, or where

they both have partnered in a solution. Attention is also given to some of the more celebrated attempts by self-interested parties, particularly the company sector, to interpose themselves forcefully into the standard-setting process. The interventions from members of Congress on behalf of the

company sector are also the object of study. In this rendering of the evolution, the author has endeavored to provide extensive references to the published literature to enable readers to study the events and developments in greater depth.
