n this book, the reader is invited to enter a strange world in which you can tell the age of the captain by counting the animals on his ship, where runners do not get tired, and where water gets hotter when you add it to other water. It is the world of a curious genre, known as "word problems" or "story problems".

Say the words, "word problem" and you will see the majority of students cringe. Along with fractions, many students find the idea of working word problems tedious and unnecessary. However, this is quite the contrary. We use words every day to verbalize our needs, wants, and desires. We complete word problems every day. Yet, it seems that once those same

complex problems that we work each day are transferred to the pages of a mathematics book, homework assignment, or exam they become "undoable."With a well-organized and consistent strategy, you will find word problems are doable. They require critical thinking and problem-solving skills. Using the 7- Moves Method, you will take a "I did it in my head strategy" and transcribe it in a format that is understandable, gradable, and truly representative of appropriate mathematical formulas and equations. *GED Mathematical Reasoning Test For Dummies* McGraw Hill Professional
THE FEDS: Quality Plan to Enlighten the Workforce (226 pages) By John E. Soller & Harold G. Davies Functional Education Department System (FEDS) is a planning system design to enlighten the workforce on how to develop and use their person-to-person skills more effectively. This plan expands on Philip B. Crosby "Quality without Tears" - The art of hassle free management. (pp. 92) The entire education process can be summarized in what he calls the "six c's": 1. Comprehension 2. Commitment 3. Competence 4. Communication 5.

Correction 6. Continuance. Feds apply this "six c's" throughout this supplement training text to enlighten the workforce about the Business Community concerns, values and needs to their workers, which is: Business need employees who are trainable and educated not those who are uneducated and have not been train to learn. In short, innovation, flexibility, and the ability to create higher-quality information out of lower data have become necessary work skills to survive in a global economy. This is why management need to use intrusive leadership like goal setting and self-directing for a continuous maintenance

and training plan (quality control elements 1 thru 20) to enlighten the workforce on the bigger picture. IMPROVE PERFORMANCE, CUT WASTE, AND SPEND MONEY WISELY. On the other hand, those companies, organizations and schools who fail to enlighten their workforce on the bigger picture have only themselves to blame for their workforce lack of self-confidence to actively participate in day-today decision process. FUNCTIONAL EDUCATION DEPARTMENT SYSTEM (FEDS) DESIGN Table of Content Reference Guide FEDS design structure strengthens the education process for learning problem solving skills, as well as analytical and critical thinking skills needed to survive in

a global economy. FEDS text is arranged in a logical system sequence. A1 furnish the hierarchy charts and other information necessary to understand FEDS system parameters. A2 thru A9 provide the fundamentals in areas of quality control. Value system engineering, and teaching technique to recognize, correctly analyze, and remedy work performance deficiency. A10 Interface auxiliary material provides guidelines for developing lesson plans to achieve National Assessment of Education Progress (NAEP) Math objectives at the learning level for understanding as follow:
1. Recognition 2. Recall 3. Comprehension
4. Application 5. Analysis / Evaluation.
