This handbook, written in a clear and precise style, describes the principles of positron emission tomography (PET) and provides detailed information on its application in clinical practice. The first part of the book explains the physical and biochemical basis for PET and covers such topics as instrumentation, image reconstruction, and the production and diagnostic properties of

radiopharmaceuticals. The focus then turns to the use of PET in clinical practice, including its role in hybrid imaging (PET-CT). A wide range of oncological applications in different body systems and organs are discussed, and uses of PET in cardiology, neurology, and psychiatry are also addressed. Characteristic findings are described and illustrated by numerous images, many of them in color. This book will be of value not only for nuclear medicine physicians and radiologists but also for

oncologists, surgeons, cardiologists, neurologists, psychiatrists, and residents with an interest in molecular imaging. *A Guide to the Project Management Body of Knowledge (PMBOK® Guide) – Seventh Edition and The Standard for Project Management (RUSSIAN)* Createspace Independent Publishing Platform

This volume presents the lecture notes from two courses given by Davar Khoshnevisan and René Schilling, respectively, at the second Barcelona Summer School on Stochastic Analysis. René Schilling's notes are an expanded version of his

course on Lévy and Lévy-type processes, the purpose of which is two-fold: on the one hand, the course presents in detail selected properties of the Lévy processes, mainly as Markov processes, and their different constructions, eventually leading to the celebrated Lévy-Itô decomposition. On the other, it identifies the infinitesimal generator of the Lévy process as a pseudo-differential operator whose symbol is the characteristic exponent of the process, making it possible to

study the properties of Feller processes as space inhomogeneous processes that locally behave like Lévy processes. The presentation is self-contained, and includes dedicated chapters that review Markov processes, operator semigroups, random measures, etc. In turn, Davar Khoshnevisan's course investigates selected problems in the field of stochastic partial differential equations of parabolic type. More precisely, the main objective is to establish

an Invariance Principle for those equations in a rather general setting, and to deduce, as an application, comparison-type results. The framework in which these problems are addressed goes beyond the classical setting, in the sense that the driving noise is assumed to be a multiplicative space-time white noise on a group, and the underlying elliptic operator corresponds to a generator of a Lévy process on that group. This implies that stochastic integration with

respect to the above noise, as well as the existence and uniqueness of a solution for the corresponding equation, become relevant in their own right. These aspects are also developed and supplemented by a wealth of illustrative examples.

One: if you understand the subject well you will be able to answer any question, no matter how complex, that's asked to you on that subject. It's much easier to understand the subject than to run around trying to understand different kinds of questions, schemes, strategies and jargons to clear PMP Exams. We

have been using this methodology since 2006 with over 19,000 PMP certified professionals and our candidates not only pass the exams in first try they also become practically better in project management due to "Understanding" the subject. Two: if the subject is explained in an interesting manner and with a lot of real world examples people absorb it better and remember it the longest. Hence these series are filled with apt and real world examples for every single concept.

And Three: people respond to illustrations and images better than just plain text. This book is filled with illustrations of concepts, tips and tricks and mind-maps that will make it easy for you to understand as well as help you create image-associations for speedy recalls and retention.
