AndCharacterization of Porous Solids and
Powders: Surface Area, Pore Size and
DensityCharacterization of Porous Solids
and Powders: Surface ...Description. The
importance of porosity has long been
recognized by scientists and engineers.
Porous solids are widely encountered in
industry and everyday life and their
behaviour, e.g. chemical reactivity,

adsorptive capacity, and catalytic activity
is dependent on their pore
structure.Characterization of Porous

Characterization of Porous Solids and
Powders ...Porous solids are classified as
spongy and corpuscular. Many corpuscular
systems are unconsolidated or only weakly

aggregated. If the area of contact between
assemblages of globular particles is small,
the system will behave in some ways as a
non-porous powder.Characterization Of
Porous Solids: An Introductory Survey ...All
those concerned with the characterization
of porous solids in academic and industrial
laboratories will find much to interest
them in this volume. It should be on the
bookshelf of applied research centres
involved in adsorption, catalysis,
purification of gases and liquids, pigments,
fillers, building materials,
etc.Characterization of Porous Solids -
