This fascinating book focuses on those who are most affected by changes in education policy and systems—the pupils. It draws on empirical evidence from a number of research projects and distills this into a compelling account of contemporary schooling from the pupils' perspective. Jean Rudduck calls for a shift in the way we currently view young people at school and sets out a case for radically rethinking aspects of school organization, relationships and practice. Her research confirms that we need to see pupils differently, to re-assess their capabilities and reflect on what they are capable of being and doing.

Alternative Practices for Helping Teachers Improve Instruction Deepublish

This book brings together a group of internationally-reputed authors in the field of digital literacy.

Their essays explore a diverse range of the concepts, policies and practices of digital literacy, and discuss how digital literacy is related to similar ideas: information literacy, computer literacy, media literacy, functional literacy and digital competence. It is argued that in light of this diversity and complexity, it is useful to think of digital literacies - the plural as well the singular. The first part of the book presents a rich mix of conceptual and policy perspectives; in the second part contributors explore social practices of digital remixing, blogging, online trading and social networking, and consider some legal issues associated with digital media.

Buku ini mengkaji tentang kompetensi guru dalam kaitannya dengan faktor-faktor yang mempengaruhinya. Saat ini persoalan kompetensi guru menjadi topik diskusi yang cukup hangat. Kompetensi guru merupakan salah satu entry point yang menjadi bagian dari desain besar dalam upaya meningkatkan kualitas pendidikan di Indonesia yang masih terpuruk. Lahirnya UU No. 14 Tahun 2005 tentang Guru dan Dosen adalah wujud pengakuan guru sebagai profesi. Hal ini membawa implikasi berupa peningkatan kesejahteraan guru yang sangat signifikan di satu sisi, namun dibarengi tuntutan peningkatan kualifikasi dan kompetensi guru di sisi lain.

Instructional supervision is intertwined with the debate on how humans learn and on what knowledge is of greatest import. Those who believe that knowledge is acquired as an individual chooses to follow his or her own inclinations tend to favor nondirective supervision. Those who believe that learning is the result of reciprocity and experimentation advocate collaborative supervision. Those who believe that learning is acquired through compliance with a set of standards advocate directive supervision. Because all methods can be successful when applied in the proper circumstances, it is important for a supervisor to be aware of his or her own beliefs on supervision. To help create such an awareness, the author includes a self-assessment questionnaire for supervisors to use in determining their beliefs. The questionnaire is followed by a

discussion on which of ten behaviors on the supervisory behavior continuum (listening, clarifying, encouraging, presenting, problem-solving, negotiating, demonstrating, directing, standardizing, and reinforcing) are associated with the orientation. A paradigm of four teacher categories (dropouts, unfocused workers, analytical observers, and professionals) based on teacher commitment and level of abstract thinking is developed to help supervisors determine which supervisory orientation is appropriate for a specific teacher's developmental stage.
