Ebony Mark Dice
 This book reviews the structure, applications, technologies, governance, environmental sustainability, smart communities, gender space and other issues related to smart cities. The book is divided into four parts. The first one entails the conceptual background, growth and development. The second part presents diverse issues on smart cities in terms of environmental sustainability, the role of the community, and gender space, among others. The third part revolves around economic and technological issues, and the fourth is a compilation of case

studies in connection with smart cities. This collection of diverse issues from different locations presents a holistic view of smart cities contributed by authors who have undertaken research projects and implemented their own unique perspectives and methods. A variety of innovative concepts such as digital governance, polycentric structures, geodata repositories, geoweb services and advanced geospatial technologies in smart city planning, urban microclimatic parameters, and urban heat islands provide invaluable knowledge for researchers and practitioners in these fields.

Im Jahre 1936 baute TOYOTA sein erstes Auto. 2004 war Toyota mit einem Börsenwert von ca. 120 Milliarden Dollar das höchst bewertete

Automobilunternehmen der Welt - dies entspricht dem Wert der gesamten deutschen Automobilindustrie (BMW, DaimlerChrysler, Porsche, Volkswagen) - mit der höchsten Produktivität und dem höchsten Gewinn. TOYOTA wird in zahlreichen Reports als die "most admired company" aufgeführt. Diese beispiellose Entwicklung wirft Fragen auf: Warum ist TOYOTA so erfolgreich? Was macht TOYOTA anders als andere Automobilunternehmen? Der Autor, selbst viele Jahre in der Automobilindustrie tätig, argumentiert überzeugend, dass der Erfolg von TOYOTA in der Unternehmenskultur begründet ist. Eine konsequente Beachtung ethischer Normen, die man hierzulande als preußische Tugenden bezeichnen würde, ist Schlüssel zum phänomenalen Erfolg TOYOTAs. Ein "Muss" für jeden Automanager und für alle, die sich für die Erfolgsmechanismen in dieser

Industrie interessieren.

Conducting Research in Psychology: Measuring the Weight of Smoke provides students an engaging introduction to psychological research by employing humor, stories, and hands-on activities.

Through its methodology exercises, learners are encouraged to use their intuition to understand research methods and apply basic research principles to novel problems. Authors Brett W. Pelham and Hart Blanton integrate cutting-edge topics, including implicit biases, measurement controversies, online data collection, and new tools for determining the replicability of a set of research findings. The Fifth Edition broadens its coverage of methodologies to reflect the types of research now conducted by psychologists. Two new chapters accommodate the needs of instructors who incorporate student research projects into their courses.

Smart Cities for Sustainable Development European Alliance for Innovation

This invaluable text/reference investigates the state of the art in approaches to building, monitoring, managing, and governing smart cities. A particular focus is placed on the distributed computing environments within the infrastructure of such cities, including issues of device connectivity, communication, security, and interoperability. A selection of experts of international repute offer their perspectives on current trends and best practices, and their suggestions for future developments, together with case studies supporting the vision of smart cities based on the Internet of Things (IoT). Topics and features: examines the various

methodologies relating to next-level urbanization, including approaches to security and privacy relating to social and legal aspects; describes a recursive and layered approach to modeling large-scale resource management systems for self-sustainable cities; proposes a novel architecture for hybrid vehicular wireless sensor networks, and a pricing mechanism for the management of natural resources; discusses the challenges and potential solutions to building smart city surveillance systems, applying knowledge-based governance, and adopting electric vehicles; covers topics on intelligent distributed systems, IoT, fog computing paradigms, big data management and analytics, and smart grids; reviews issues of sustainability in the design of smart cities and healthcare services, illustrated by case studies taken from cities in Japan, India, and Brazil. This illuminating volume offers a comprehensive reference for researchers investigating smart cities and the IoT, students interested in the distributed computing technologies used by smart living systems, and practitioners wishing to adopt the latest security and connectivity techniques in smart city environments.
