Top mathematicians talk about their work and lives Fascinating Mathematical People is a collection of informal interviews and memoirs of sixteen prominent members of the mathematical community of the twentieth century, many still active. The candid

portraits collected here demonstrate that while these men and women vary widely in terms of their backgrounds, life stories, and worldviews, they all share a deep and abiding sense of wonder about mathematics. Featured here—in their own words—are major research mathematicians whose cutting-edge discoveries have advanced the frontiers of the field, such as Lars Ahlfors, Mary Cartwright, Dusa McDuff, and Atle Selberg. Others are leading mathematicians who have also been highly influential as teachers and mentors, like Tom Apostol and Jean Taylor. Fern Hunt describes what it was like to be among the first black women to earn a PhD in mathematics. Harold Bacon made trips to Alcatraz to help a prisoner learn calculus. Thomas Banchoff, who first became interested in the fourth dimension while reading a Captain Marvel comic, relates his fascinating friendship with Salvador Dalí and their shared passion for art, mathematics, and the profound connection between the two. Other mathematical people found here are Leon Bankoff, who was also a Beverly Hills dentist; Arthur Benjamin, a part-time professional magician; and Joseph Gallian, a legendary mentor of future mathematicians, but also a world-renowned expert on the Beatles. This beautifully illustrated collection includes many photographs never before published, concise introductions by the editors to each person, and a foreword by Philip J. Davis.

Iranian history was long told through a variety of stories and legend, tribal lore and genealogies, and tales of the prophets. But in the late nineteenth century, new institutions emerged to produce and circulate a coherent history that fundamentally reshaped these fragmented narratives and dynastic storylines. Farzin Vejdani investigates this transformation to show how cultural institutions and a growing public-sphere affected history-writing, and how in turn this writing defined Iranian nationalism. Interactions between the state and a cross-section of Iranian society—scholars, schoolteachers, students, intellectuals, feminists, and poets—were crucial in shaping a new understanding of nation and history. This enlightening book draws on previously unexamined primary sources—including histories, school curricula, pedagogical materials, periodicals, and memoirs—to demonstrate how the social locations of historians writ broadly influenced their interpretations of the past. The relative autonomy of these historians had a direct bearing on whether history upheld the status quo or became an instrument for radical change, and the writing of history became central to debates on social and political reform, the role of women in society, and the criteria for citizenship and nationality. Ultimately, this book traces how contending visions of Iranian history were increasingly unified as a centralized Iranian state emerged in the early twentieth century.

Emotional, physical and social well-being describe human health from birth. Good health goes hand in hand with the ability to handle stress for the future. However, biological factors such as diet, life experiences such as drug abuse, bullying, burnout and social factors such as family and community support at the school stage tend to mold health problems, affecting academic achievements. This book is a compilation of current scientific information about the challenges that students, families and teachers face regarding health and academic achievements. Contributions also relate to how physical activity, psychosocial support and other interventions can be made to understand resilience and vulnerability to school desertion. This book will be of interest to readers from broad professional fields, non-specialist readers, and those involved in education policy.
