 Faculty Machine learning (ML) is the  
 study of computer algorithms that  
 improve automatically through  
 experience and by the use of data. It is  
 seen as a part of artificial  
 intelligence. Machine learning algorithms  
 build a model based on sample data,

known as "training data", in order to  
 make predictions or decisions without  
 being explicitly programmed to do  
 so. Machine learning - Wikipedia

 Analysis 10th Edition, Richard L. Burden -  
 bartleby Background: Up-to-date  
 evidence about levels and trends in  
 disease and injury incidence, prevalence,  
 and years lived with disability (YLDs) is  
 an essential input into global, regional,  
 and national health policies. In the  
 Global Burden of Disease Study 2013  
 (GBD 2013), we estimated these  
 quantities for acute and chronic diseases

and injuries for 188 countries between 1990 and 2013. Global, regional, and national incidence, prevalence, and ...Background: The Global Burden of Diseases, Injuries, and Risk Factors Study 2015 provides an up-to-date synthesis of the evidence for risk factor exposure and the attributable burden of disease. By providing national and subnational assessments spanning the past 25 years, this study can inform debates on the importance of addressing risks in context. Global, regional, and national comparative risk assessment ...In numerical analysis, numerical differentiation describes algorithms for estimating the derivative of a mathematical function or function subroutine using values of the function and perhaps other knowledge about the function. Finite differences. The simplest method is to use finite difference approximations. ...Numerical differentiation - Wikipedia Numerical analysis. The method of false position provides an exact solution for linear functions, but more direct algebraic techniques have supplanted its use for these functions. ... Richard L. Burden, J.
