Outbreak Investigation:
Mental Health in the Time
of Coronavirus (COVID-19)
Springer Science &
Business Media

Based on major multi-centre research in the UK, *Dying to Care* identifies why work stress is a problem in health care generally, and in HIV health care in particular. The similarities and differences between work stress experienced in general health care settings and in HIV/AIDS are explored in a state-of-the-art review of research and experience in the field to date. The book has a practical focus, and goes on to explore ways in which the unique stresses of patient advocacy in HIV/AIDS can be addressed, identifying the best approaches for management. Highlighting the practical importance of a clear distinction between the burnout and work stress for design of strategies for burnout prevention, the emergence of the concept

of burnout is described and the general historical confusion between work stress and burnout examined. This will be a key handbook for managers, physicians, nurses, social workers, health advisors and counsellors working in or alongside healthcare. *COVID-19 Pandemic: Mental health, life habit changes and social phenomena* Frontiers Media SA

This book integrates the growing clinical research evidence related to the emerging transdisciplinary field of occupational health and wellness. It includes a wide range of important topics, ranging from current conceptual approaches to health and wellness in the workplace, to common problems in the workplace such as presenteeism/abstenteeism, common illnesses, job-related burnout, to prevention and intervention methods. It consists of five major parts. Part I, "Introduction and Overviews," provides an overview and critical evaluation of the emerging conceptual

models that are currently driving the clinical research and practices in the field. This serves as the initial platform to help better understand the subsequent topics to be discussed. Part II, "Major Occupational Symptoms and Disorders," exposes the reader to the types of critical occupational health risks that have been well documented, as well as the financial and productivity losses associated with them. In Part III, "Evaluation of Occupational Causes and Risks to Workers' Health," a comprehensive evaluation of these risks and causes of such occupational health threats is provided. This leads to Part IV, "Prevention and Intervention Methods," which delineates methods to prevent or intervene with these potential occupational health issues. Part V, "Research, Evaluation, Diversity and Practice," concludes the book with the review of epidemiological, measurement, diversity, policy, and practice issues—with guidelines on changes that are needed

to decrease the economic and health care impact of illnesses in the workplace, and recommendations for future. All chapters provide a balance among theoretical models, current best-practice guidelines, and evidence-based documentation of such models and guidelines. The contributors were carefully selected for their unique knowledge, as well as their ability to meaningfully present this information in a comprehensive manner. As such, this Handbook is of great interest and use to health care and rehabilitation professionals, management and human resource personnel, researchers and academicians alike.

Well-Being of School Teachers in Their Work Environment diplom.de

Burnout is a common metaphor for a state of extreme psychophysical exhaustion, usually work-related. This book provides an overview of the burnout syndrome from its earliest recorded occurrences to current empirical studies. It reviews perceptions that burnout is particularly prevalent among certain professional groups - police officers, social

workers, teachers, financial traders - and introduces individual inter- personal, workload, occupational, organizational, social and cultural factors. Burnout deals with occurrence, measurement, assessment as well as intervention and treatment programmes.; This textbook should prove useful to occupational and organizational health and safety researchers and practitioners around the world. It should also be a valuable resource for human resources professional and related management professionals.

Attribution Theory in the Organizational Sciences

Psycho Information Technologies

As the 21st century has seen, lifelong learning has become more important as many countries have emerged into [learning societies]. With these learning societies, adult and community education, along with new technologies, play a major role in shaping and reshaping their economic, political, and cultural realities. Handbook of Research on Technologies for Improving the 21st Century Workforce: Tools for Lifelong Learning

addresses how technologies impact the combination of workforce education and adult learning. This comprehensive collection of research from leading authorities and front line faculty seeks to equip adult learners/employees with the right knowledge and skills to continue to contribute to the economy given the importance of the essential role of technologies.

Issues in Nursing Research, Training, and Practice: 2011 Edition is a ScholarlyEditions™ eBook that delivers timely, authoritative, and comprehensive information about Nursing Research, Training, and Practice. The editors have built Issues in Nursing Research, Training, and Practice: 2011 Edition on the vast information databases of ScholarlyNews.™ You can expect the information about Nursing Research, Training, and Practice in this eBook to be deeper than what you can access anywhere else, as well as consistently reliable, authoritative, informed, and relevant. The content of Issues in Nursing

Research, Training, and Practice: 2011 Edition has been produced by the world's leading scientists, engineers, analysts, research institutions, and companies. All of the content is from peer-reviewed sources, and all of it is written, assembled, and edited by the editors at ScholarlyEditions™ and available exclusively from us. You now have a source you can cite with authority, confidence, and credibility. More information is available at <http://www.ScholarlyEditions.com/>.

Issues in Dentistry, Oral Health, Odontology, and Craniofacial Research: 2012 Edition River Publishers

A rapidly growing number of people experience psychological strain at their workplace. In almost all industrialized countries, absenteeism and turnover rates increase, and an increasing amount of workers receive disablement benefits because of psychological problems. This book, first published in 1993, concentrates on a specific kind of occupational stress: burnout, the depletion of energy resources as a result of continuous emotional demands of the job. This

volume presents theoretical perspectives that had been developed in the United States and Europe, discusses methodological issues, and examines organisational contexts. Written by an international group of leading scholars, this book will be of interest to students of both psychology and human resource management. Burnout in der psychiatrischen Krankenpflege IAP Die umfassende empirische Studie untersucht das Burnoutsyndrom in der psychiatrischen Krankenpflege. Begriffsanalysen untermauern die Eigenständigkeit dieses Syndroms. Die Auswertung der Resultate identifizierte vier Hauptursachen für das "Ausbrennen" beim psychiatrischen Pflegepersonal: Ärger, Aggression, zu geringe Transparenz, zu große Arbeitsbelastung sowie Persönlichkeitscharakteristika der Betroffenen. Die Ergebnisse sind für alle Mitarbeiter psychiatrischer und medizinischer Einrichtungen von großer Bedeutung. Psychosocial, Behavioral,

and Clinical Implications for Public Mental Health During the COVID-19 Pandemic Psychology Press

Business Research Methods is the complete introduction to doing business research and is an ideal guide for students embarking on a research project. Developed specifically with business and management students in mind, this textbook explores the nature and purpose of business research and the issues it entails, while also providing students with practical advice through "Tips and skills" boxes. In addition to a broad range of relevant examples, the book features a substantial discussion of ethics, and a strong emphasis on the most frequent challenges faced by students, such as choosing a research question, planning a project, and writing it up. Fresh voices and perspectives run throughout this edition. New author, Bill Harley, further internationalizes the book's coverage, based on his expertise in the Australian business and management context. Also hear from Amrit, Jordan, Anna, Ed, and Alex - an additional five

students whose personal insights and advice in the "student experience" feature help you avoid common mistakes, and follow their successful strategies when undertaking your own research project. This edition has been extensively revised, updated, and streamlined. Coverage of E-Research is now woven throughout the entire book to reflect the centrality of internet-based research methods. The book is accompanied by a suite of online resources that include:

For students: * Multiple choice questions * Research Project guide * Interviews with students * Data sets * Using Excel in data analysis (in Excel) * Web links

For lecturers: * Test bank * Discussion questions * PowerPoint slides * Lecturer's guide * Case studies * Figures and plates from the text * VLE cartridge

The Burnout Phenomenon
Springer Nature

This book presents a unique theoretical and practical overview of the issues relating to stress and burnout among healthcare professionals. Occupational stress offers guidance and advice on many subjects, including the maintenance of a healthy workforce.

Issues in Nursing Research, Training, and Practice: 2011 Edition Nelson Thornes

This book describes how and why "distant" social influences, such as socialization practices, interpersonal relationships, and social organization, are often just as important as medical considerations in determining an individual's tendency toward health or illness. The essays describe some of the pathways through which these social influences are exerted and also offer suggestions as to how these influences can be swayed in the direction of good health. The editors' broader aim is to stress the importance of social psychological orientation as a useful conceptual tool for the analysis of health and illness.

Advances in Human Factors and Ergonomics in Healthcare and Medical Devices John Wiley & Sons

This book is based on our most recent investigations revealing the complexity of the determinants of burn out in different populations at risk (health care professions, teachers, social workers etc.). Based on our empirical study we have developed a model of

vulnerability to burn out which explains it as a specific complementary interaction between certain personality profile and the psychological climate at work place. In the course of evaluation there have been employed different inventories which are now validated as an assessment battery in about 300 subjects. Temperament and Character Inventory (revised) has been exclusively standardized for Bulgarian population as well. Although burn out syndrome (BOS) is thoroughly discussed in modern literature, the present proposal is unique in the following aspects: It emphasizes the role of personality profiling understood as complementary construct to the dimensional measures of psychological climate. In this way the authors challenge traditional views of BOS as systematic phenomenon. This book aims at establishment of the vulnerability to BOS (proneness) as well as to revealing of the protective factors and therefore to underpin early diagnosis and prevention programs. Our book brings together several perspectives: the clinical (psychological and

psychopathological) with the management perspective. In this way it is most suitable for both general and specialized audience, including health care managers and mental health professionals, such as trainees in psychiatry This book consist of entirely original investigation of BOS in specific populations at risk with novel battery of assessment tools

Contents: 1. Introduction and background of the studies in the field of burn out 2. Theoretical model of vulnerability to burn out: personality and Psychological Climate in the Context of Burnout Syndrome (BOS) 3. Empirical measures of vulnerability to BOS. Standardization and validation of the battery of assessment tools 4. Comparative study of burnout in medical professionals from psychiatric units and other health care sectors 5. Burnout in healthcare employees working in surgical departments, anesthesiology and intensive care 6. BOS among general practitioners 7. Comparative analysis of vulnerability to burnout syndrome in health and social care personnel 8.

Regression and factor models of burn out components in health care 9. Anxiety and Depression as state predictors for burn out in health care 10. The impact of burn out on quality of life in the context of professional realization in medicine 11. BOS studies among employees in penitentiary system 12. Coping strategies and burnout syndrome prevention

Community Series in the Consequences of COVID-19 on the Mental Health of Students - Volume II Rowman & Littlefield

This book explores how human factors and ergonomic principles are currently transforming healthcare. It reports on the design of systems and devices to improve the quality, safety, efficiency and effectiveness of patient care, and discusses findings on improving organizational outcomes in the healthcare setting, as well as approaches to analyzing and modeling those work aspects that are unique to healthcare. Based on papers presented at the AHFE 2019 International Conference on Human Factors and Ergonomics in Healthcare and Medical

Devices, held on July 24-28, 2019, in Washington, DC, USA, the book highlights the physical, cognitive and organizational aspects of human factors and ergonomic applications, and shares various perspectives, including those of clinicians, patients, health organizations, and insurance providers. Given its scope, the book offers a timely reference guide for researchers involved in the design of medical systems, and healthcare professionals managing healthcare settings, as well as healthcare counselors and international health organizations.

Real Behavior Change in Primary Care Frontiers Media SA

This is the first handbook to examine the theory, research, and practice of clinical supervision from an international, multi-disciplinary perspective. Focuses on conceptual and research foundations, practice foundations, core skills, measuring competence, and supervision perspectives Includes original articles by contributors from around the world, including Australia, Finland, Hong Kong, Slovenia, South Africa,

Sweden, the United Kingdom, and the United States Addresses key aspects of supervision, including competency frameworks, evidence-based practice, supervisory alliances, qualitative and quantitative assessment, diversity-sensitive supervision, and more. Features timely and authoritative coverage of the latest research in the field and novel ideas for clinical practice.

Occupational and Environmental Safety and Health IV Frontiers Media SA

Hospitals and nursing homes are responding to changes in the health care system by modifying staffing levels and the mix of nursing personnel. But do these changes endanger the quality of patient care? Do nursing staff suffer increased rates of injury, illness, or stress because of changing workplace demands? These questions are addressed in *Nursing Staff in Hospitals and Nursing Homes*, a thorough and authoritative look at today's health care

system that also takes a long-term view of staffing needs for nursing as the nation moves into the next century. The committee draws fundamental conclusions about the evolving role of nurses in hospitals and nursing homes and presents recommendations about staffing decisions, nursing training, measurement of quality, reimbursement, and other areas. The volume also discusses work-related injuries, violence toward and abuse of nursing staffs, and stress among nursing personnel—and examines whether these problems are related to staffing levels. Included is a readable overview of the underlying trends in health care that have given rise to urgent questions about nurse staffing: population changes, budget pressures, and the introduction of new technologies. *Nursing Staff in Hospitals and Nursing Homes* provides a straightforward examination of complex and sensitive issues surround the role and value of nursing on our health care system.

Handbook of Occupational Health and Wellness Frontiers Media SA

Each chapter is filled with examples that provide context for the theories and concepts being discussed.

Promoting Mental Health at Work: New Insights and Practical Implications IGI Global

This book argues that conventional interpretations of Freudian psychology have not accounted for the existence and complexity of death anxiety and its intrinsic relation to the creation of illusions and delusions. This book contends that there is sufficient evidence to support the view that death anxiety is not only a symptom of certain modes of psychopathology, but is a very normal and central emotional threat human beings deal with only by impeding awareness of the threat from entering consciousness. The immanence of the fear of death requires vigilant defensive and coping techniques, especially the distortion of reality through these defenses and fantasies, so that over-whelming terror does not psychologically cripple the organism. The fear of death is so horrific that human beings must insulate themselves in religious, social, and

private illusions, rituals, obsessive pursuits, self-glorification, and myriad desperate attempts to lie about the quintessential nature of reality. Death is that terror that induces psychopathology. This book demonstrates that a careful reading of Freud reveals a copious amount of material supporting these propositions.

[Social Psychology of Health and Illness](#)
Frontiers Media SA

This book gathers cutting-edge research and best practices relating to occupational risk and safety management, healthcare and ergonomics. It covers strategies for different industries, such as construction, chemical and healthcare. It emphasises challenges posed by automation, discusses solutions offered by technologies, and reports on case studies carried out in different countries. Chapters are based on selected contributions to the 18th International Symposium on Occupational Safety and Hygiene (SHO 2022), held on September 8-9, 2022, in Porto, Portugal. By reporting on different perspectives, such as the ones from managers, workers and OSH

professionals, and covering timely issues, such as implications of telework, issues related to gender inequality and applications of machine learning techniques in occupational health, this book offers extensive information and a source of inspiration to OSH researchers, practitioners and organizations operating in both local and global contexts.
