Access to markets for smallholder farmers in Alto Molócue and Molumbo, Mozambique: Mid-term impact evaluation of INOVAGRO II Harvard Business Review Press

While many food science programs offer courses in the microbiology and processing of fermented foods, no recently published texts exist that fully address the subject. Food fermentation professionals and researchers also have lacked a single book that covers the latest advances in biotechnology, bioprocessing, and microbial genetics, physiology, and taxonomy. In *Microbiology and Technology of Fermented Foods*, Robert

Hutkins has written the first text on food fermentation microbiology in a generation. This authoritative volume also serves as a comprehensive and contemporary reference book. A brief history and evolution of microbiology and fermented foods, an overview of microorganisms involved in food fermentations, and their physiological and metabolic properties provide a foundation for the reader. How microorganisms are used to produce fermented foods and the development of a modern starter culture industry are also described. Successive chapters are devoted to the major fermented foods produced around the world with coverage including microbiological and technological features for manufacture of these foods: Cultured Dairy Products Cheese Meat Fermentation Fermented Vegetables Bread Fermentation Beer Fermentation Wine Fermentation Vinegar

Fermentation of Foods in the Orient Examples of industrial processes, key historical events, new discoveries in microbiology, anecdotal materials, case studies, and other key information are highlighted throughout the book.

Comprehensively written in a style that encourages critical thinking, *Microbiology and Technology of Fermented Foods* will appeal to anyone dealing in food fermentation – students, professors, researchers, and industry professionals.

Yes, Africa Can Springer

Gain a clear understanding of the fundamental concepts and applications behind today's operations and supply chain management with the reader-friendly approach in Collier/Evans' popular OPERATIONS AND SUPPLY CHAIN MANAGEMENT, 2E. The authors present detailed, solved problems throughout this edition to illustrate key formulas and computations as you learn to complete both manual and digital calculations using Excel spreadsheet templates and other Excel models for optimization and simulation. New content examines process analysis and resource utilization, analytics in OM, capacity measurement, applications of linear optimization and other critical operations management (OM) and supply chain management (SCM) topics. In addition, new and proven review questions, experiential activities, problems and exercises as well as feature boxes teach you how to work with the latest OM and SCM concepts and tools. Important Notice: Media content referenced within the product description or the product text may not be available in the ebook version.

When It Rains, It Pours is the third publication from Proximity Designs, a Yangon-based social business and one of Myanmar's largest providers of agricultural products and services. The book provides a panoramic view of the sesame ecosystem in Myanmar, with a deep dive from the perspective of small farmers, and offers tangible opportunities to address the challenges they face. Known as the forgotten crop for its tendency to be overshadowed by the more established paddy, sesame is grown in Myanmar's Central Dry Zone by an estimated 500,000 farmers. Myanmar is also one of the top exporters of sesame in the world, with even greater export potential, but many factors threaten the livelihood of sesame farmers, such as climate change, labor shortages and pests and diseases. The publications is the output of eight weeks of intensive research conducted in Myanmar's main sesame growing areas by a team of ten design researchers, seven from

Proximity's own team and three from world-renowned design firm Studio D Radiodurans. Using a design research approach, the team sought to deliver a deep, human understanding of the problems sesame farmers face and opportunities to overcome them.

The Pianolist Food & Agriculture Org.

In recognition of the well-understood challenges with promoting rural and agricultural finance, the need for a more systemic approach to promoting financial inclusion is gaining traction in the thinking and programming approaches of the community of practice. Within this system-level view, the concept of de-risking the overall operating environment of agricultural value chains is recognized as a critically important factor. Accordingly, numerous project-based and stand-alone "de-risking" arrangements have recently been launched or are at various stages of design throughout sub-Saharan Africa. The generation of evidence of performance, impact and cost effectiveness is critical to validating the relevance of these types of schemes, as well as to informing design improvement and implementation, for the sake of scalability and replicability. This study takes stock of these experiences in an effort to contribute to building up the evidence base to help inform the future strategy and design of similar programmatic interventions.

In Pawi Woreda, Metekel Zone, Ethiopia Food & Agriculture Org. Paraguay has achieved strong and resilient growth and made progress across a range of development outcomes since it emerged from a prolonged period of economic and political instability in the early 2000s. In 2014, the country adopted its first National Development Plan, setting course towards ...

A technical review of select de-risking schemes to promote rural and agricultural finance in sub-Saharan Africa Heinrich-Barth-Institut

Africa's Progress in Regional and Global Economic Integration - Towards Transformative Regional Integration Food and Agriculture Organization

Academic Paper from the year 2019 in the subject Agrarian Studies, grade: Good, Bahir Dar University (College of Agriculture and Environmental Science), course: Agricultural economics,

language: English, abstract: This study was aimed at analyzing value chain of Groundnut in Pawi Woreda, Metekel Zone, Benishangul Gumuz Region with specific objectives of identifying groundnut value chain and examining the performance of actors in the chain; analyzing the determinants of groundnut supply to the market in the study area; and identifying and map marketing channels. The data were collected from both primary and secondary sources. The primary data for this study were collected from 155 farmers, 30 traders and 25 consumers through using questionnaires. Descriptive statistics and Econometrics models were used to analyze the collected data. Results show that the main groundnut value chain actors in the study area groundnut producers/farmer, input suppliers, local assembler, wholesalers, retailers, Processers and consumers. It is also found out that groundnut passes through several intermediaries with little value being added before reaching the end users. The chain is governed by wholesalers and Processers who have capital advantage over the other chain actors. Therefore, farmers are forced to capture a lower share of profit margin. The result of OLS regression model indicated that marketable supply is significantly affected by sex of household head, age of household head, agricultural extension service, ownership of transport facility, distance of the nearest market and quantity of groundnut produced. Therefore, policy aiming at increasing farmers' access to modern inputs, developing and improving infrastructure, gender consideration, and improving extension system are recommended to accelerate the chain's development.

Harvard Business Review Leadership & Strategy Boxed Set (5 Books) John Wiley & Sons

Based on papers from the 3rd International Workshop on African Archaeobotany, Frankfurt, Germany, July 5-7, 2000

A Review of Patterns and Progress from Around the World LIT Verlag Münster

This publication gives a wide-ranging perspective on the present state of mechanization in the developing world, and, as such, constitutes a solid platform on which to build strategies for a sustainable future. Farm mechanization forms an integral plank in the implementation of sustainable crop production intensification methodologies and sustainable intensification necessarily means that the protection of natural resources and the production of ecosystem services go hand-in-hand with intensified production practices. This requires specific mechanization measures to allow crops to be established with minimum soil disturbance, to allow the soil to be protected under organic cover for as long as possible, and to establish crop rotations and associations to feed the soil and to exploit crop nutrients from various soil horizons. This work is the starting point to help the reader understand the complexities and requirements of the task ahead.

A Guide for Pianola Players OECD Publishing

* Provides a broad overview of modeling approaches and solution methodologies for addressing inventory problems, particularly the management of high cost, low demand rate service parts found in multi-echelon settings * The text may be used in a variety of courses for first-year graduate students or senior undergraduates, or as a reference for researchers and practitioners * A background in stochastic processes and optimization is assumed

A Handbook for Firms Building Sustainable Supply Chains OECD

Publishing

It is becoming increasingly evident that a strong focus on digitalisation as a means to drive agricultural transformation is bearing dividends in the forms of increased production, better livelihoods, more efficient value chains and ultimately greater food and nutrition security. Digitalisation is also key to attracting youth back to agriculture. The use of a wide range of technologies – from mobile phones to drones – is helping smallholders gain access to the information and data they need to transform their businesses. One of the goals in CTA's 2016–2020 Strategic Plan was to reach 1 million farmers, and a focus on digitalisation is helping us to achieve that. In many of our activities, there is a strong focus on supporting youth and promoting women empowerment.

Microbiology and Technology of Fermented Foods Springer Science & Business Media

Survey and study background In an effort to gain some answers on the 1ST capital investment (project selection) decision criteria used in practice, a survey was undertaken in 1990 of 80 American, British, Australian and New Zealand companies. A one-page survey form was used that provided 15 possible 1ST investment criteria, a means of indicating whether they are used or not, the percentage of projects to which each criterion is applied, and an overall ranking in terms of total project value for each criterion. The criteria are shown in Table 2.1. The criteria are categorized into financial, management, and development criteria. They were developed, first, through interviews with some 20 chief information officers (CIOs) in Britain and the United States. These CIOs were questioned on what criteria their

organizations use in selecting 1ST investment projects, with the aim of developing a full list of the criteria used in practice.

Secondly, the criteria and the form were tested and refined in a pilot study with some 12 companies. The criteria used in the survey and listed in Table 2.1 are primary level criteria.

Arrangement of farm New York ; Toronto : McGraw-Hill

Takes an in-depth look at twenty-six economic and social development successes in Sub-Saharan African countries, and addresses how these countries have overcome major developmental challenges.

Leveraging Export Diversification in Fragile Countries Field Institute

Master's Thesis from the year 2016 in the subject Business economics - Supply, Production, Logistics, , course: Agricultural Economics, language: English, abstract: This study aimed to analyze the technical efficiency of sesame production in Humera area and to identify major factors that cause efficiency differentials of smallholder farmers. The objective of the study is to measure the technical efficiency of small holder farmers in sesame production. The study was conducted using a cross sectional data collected in 2015/2016-production year from a total sample of 110 households. Cobb-Douglas function was employed to estimate technical efficiency of smallholder farmers in sesame production. The finding of the study indicated that there is inefficiency in the production of sesame in the study area. The estimation of the frontier model with inefficiency variables shows that the mean technical efficiency of farmers is 0.69 (69%). This implies that production of sesame can be increased by 31 percent given the existing technological level.

This indicates that the farmers did not use production inputs efficiently in such a way that they give their maximum potential. The estimated stochastic production frontier model together with the inefficiency parameters suggests that any attempt to strengthen technical efficiency of smallholder farmers in the study area must give due attention to the improvement of the principal causes for efficiency differentials such as education, age, extension contact, credit availability, off farm activities and proximity, which were found to be significant determinants of efficiency level. The negative coefficient of educational status, age, credit availability, extension contact and off farm activities means these factors are important in determining the existing efficiency of farmers positively and significantly. While the positive coefficients of proximity indicate that the increments in these factors increase inefficiency. Given the limited resources in the study area will enable the concerned parties engaged in efforts for improvement of the product and productivity of this part of the community to bring about the desired changes in a cost effective way than trying to inject an investment on the production of sesame.

Their Breeding and Utilization Springer

There is a growing recognition that governance of value chains plays a crucial role in issues of inclusion and endogenous economic growth, but there is as yet little understanding of the relationships between chain governance and development interventions of multiple actors. In practice, neither (inter)national nor local actors always share information and coordinate their actions. This book brings together interdisciplinary and integrative scholarly contributions to look at

the links between international firm strategies and locally ...

A year in review Cengage Learning

Value-Chain of Biofuels: Fundamentals, Technology, and Standardization presents the fundamental aspects of biofuel production, from biomass conversion technologies and biofuels' end products to related policy regulation and standardization. Sections explore the current biofuels industry, addressing pretreatment, feedstocks, and conversion processes, review different pathways to produce biofuels, including bioethanol, biochar, biogas/bio-hydrogen, bio-oil, biodiesel, and many others, and finally, present policy regulation and standardization on biofuel production, with a focus on applications. Case studies are provided alongside reviews from academic and industry perspectives, discussing economics and lifecycle assessments (LCA) of biofuel production, as well as analyses of supply chains. Offering a comprehensive and timely overview, this book provides an ideal reference for researchers and practitioners working in bioenergy and renewable energy, but it will also be of interest to chemists, bioengineers, chemical engineers, and the agricultural and petrochemical industries. Helps readers gain academic and industry perspectives on biofuel production with the inclusion of lab-based experimentation and informative case studies Contains an exhaustive analysis of biomass conversion technologies for biofuels and biochemicals Provides a clear and concise text that avoids the overuse of jargon and technical language

Volume I. Initial Assessment GRIN Verlag

The Agricultural Sector Review aims to provide an up-to-date picture of the current socio-economic situation of the agricultural

sector in Lebanon and to identify key challenges and evidence-based strategies for policy-making. The first part provides a detailed overview of Lebanon's agricultural and food systems, including a section focused on the governance the overall policy framework and the specific policies currently governing the sector. The second part of this study consists of an identification of the challenges and issues that are currently affecting and constraining the development of the Lebanese agricultural sector to its full potential. Once identified these challenges, the study proposes several potential strategies and recommendations that could be applied at the policy-making level to drive the improvement of the sector. Finally, we provide a discussion towards a renewed national agricultural strategy; in which we reviewed some lessons learned from previous success stories in the agricultural sector in Lebanon and compile the strengths, weaknesses, opportunities and threats of the agricultural sector.

Working with Smallholders Springer Nature

Based on Africa's deep rooted structural problems, the key aspect of a transformative regional integration is how to promote structural transformation by adapted strategies and policies for the African regional economic communities, for the Continental Free Trade Area, and for the Tripartite Free Trade Area. Regional integration in Africa is based on a conventional (linear) model, starting with trade preference zones and moving to free trade areas, customs unions, and monetary and economic zones, with the ultimate goal to reach political unity. Specific problems of a more transformative regional integration agenda are discussed, such as: food security and agriculture; industry development, enterprise growth and competition; and economic partnership agreements with extra-regional partners. In the final section, the impact of three global value chains of importance for Africa (diamonds, shea butter, and sesame) are considered on regions, on sub-regions, and on regional integration. (Series: African Development Perspectives Yearbook, Vol. 18) [Subject: African Studies, Economics
