The Author has over 40 years of experience in the construction field exposed to Contractors, Consultants, Clients and teaching environments. His special interest is Construction Auditing and he has done various researches, submitted articles to construction magazines and presented research papers at international conferences. His personal opinion is that the Construction Cost professional Institutions and the Professionals at large have completely ignored the field of construction auditing for a long time. The governments' construction expenditure, which now involve a significant portion of the budget of many countries mandated to be audited as check & balance. This government construction auditing exercise is still carried out by Financial Institutions under the name of Performance Auditing. The lack of interest by the Cost Construction professional Institutions resulted in the continuation of Performance Auditing by Financial Accountants. Construction at present is huge, complicated, involving different entities with various Contractual arrangements. The Financial Accountants do not have the sufficient skill to audit construction in the present environment and the results are plain to see. The loss owing to Frauds in government double (internal & external) audited construction has reached upwards of US \$ 4 Trillion per year according to Transparency International. That is US \$ 1.50 per head per day of the entire world population. This is an affront to the 21 century as more than a Billion people live below US \$ 1.25 per day. The immediate requirement is a Post- Graduate course on Construction Auditing, Construction Auditing standards and a union for such auditors. The author hopes that this book will serve some purpose in that long exercise. The book can also be helpful to practicing construction professionals and students following construction related courses. . The State of the World's Land and Water Resources for Food and Agriculture is FAO's first flagship publication on the global status of land and water resources. It is an 'advocacy' report, to be published every three to five years, and targeted at senior level decision makers in agriculture as well as in other sectors. SOLAW is aimed at sensitizing its target audience on the status of land resources at global and regional levels and FAO's viewpoint on appropriate recommendations for policy formulation. SOLAW focuses on these key dimensions of analysis: (i) quantity, quality of land and water resources, (ii) the rate of use and sustainable management of these resources in the context of relevant socio-economic driving factors and concerns, including food security and poverty, and climate change. This is the first time that a global, baseline status report on land and water resources has been made. It is based on several global spatial databases (e.g. land suitability for agriculture, land use and management, land and water degradation and depletion) for which FAO is the world-recognized data source. Topical and emerging issues on land and water are dealt with in an integrated rather than sectoral manner. The implications of the status and trends are used to advocate remedial interventions which are tailored to major farming

systems within different geographic regions.
