LOZANO JACOBY

Biotechniques Theory & Practice Rastogi Publications

This full-color introduction to agronomy and crop science offers both traditional agricultural students and students with nonagricultural backgrounds a timely look at the principles of crop science, sustainable agriculture, and a host of related societal issues. A must-read text for anyone interested in what are arguably the most profoundly important issues of our time, INTRODUCTION TO AGRONOMY, second edition addresses the basics of safe and sustainable food and fiber production as well as big picture topics such as energy, ecology, and environmental quality. Throughout the text, readers will find information and illustrations on the latest agricultural methods, regulations, and practices--and how each is impacting our society and each individual within it. Important Notice: Media content referenced within the product description or the product text may not be available in the ebook version.

Endocrinology and Reproductive Biology Rastogi Publications

This book consists of eighteen articles in the area of 'Combinatorial Matrix Theory' and 'Generalized Inverses of Matrices'. Original research and expository articles presented in this publication are written by leading Mathematicians and Statisticians working in these areas. The articles contained herein are on the following general topics: 'matrices in graph theory', 'generalized inverses of matrices', 'matrix methods in statistics' and 'magic squares'. In the area of matrices and graphs, specific topics addressed in this volume include energy of graphs, q-analog, immanants of matrices and graph realization of product of adjacency matrices. Topics in the book from 'Matrix Methods in Statistics' are, for example, the analysis of BLUE via eigenvalues of covariance matrix, copulas, error orthogonal model, and orthogonal projectors in the linear regression models. Moore-Penrose inverse of perturbed operators, reverse order law in the case of indefinite inner product space, approximation numbers, condition numbers, idempotent matrices, semiring of nonnegative matrices, regular matrices over incline and partial order of matrices are the topics addressed under the area of theory of generalized inverses. In addition to the above traditional topics and a report on CMTGIM 2012 as an appendix, we have an article on old magic squares from India.

Learn all the microbiology and basic immunology concepts you need to know for your courses and exams. Now fully revised and updated, *Mims'* clinically relevant, systems-based approach and abundant colour illustrations make this complex subject easy to understand and remember. Learn about infections in the context of major body systems and understand why these are environments in which microbes can establish themselves, flourish, and give rise to pathologic changes. This systems-based approach to microbiology employs integrated and case-based teaching that places the 'bug parade' into a clinical context. Effectively review for problem-based courses with the help of chapter introductions and 'Lessons in Microbiology' text boxes that highlight the clinical relevance of the material, offer easy access to key concepts, and provide valuable review tools.

Approach microbiology by body system or by pathogen through the accompanying electronic 'Pathogen Parade' - a quickly searchable, cross-referenced glossary of viruses, bacteria and fungi A new electronic 'Vaccine Parade' offers quick-reference coverage of the most commonly used vaccines in current clinical practice Deepen your understanding of epidemiology and the important role it plays in providing evidence-based identification of key risk factors for disease and targets for preventative medicine. Grasp and retain vital concepts easily, with a user-friendly colour coded format, succinct text, key concept boxes, and dynamic illustrations. New and enhanced information reflects the growing importance of the human microbiota and latest molecular approaches Access the complete contents on the go via the accompanying interactive eBook, with a range of bonus materials to enhance learning and retention - includes self-assessment materials and clinical cases to check your understanding and aid exam preparation.

Chordate Embryology Rastogi Publications

Cancer is a common disease with a devastating impact on the physical and psychological well being of patients. The diagnosis of cancer brings upon many clinical challenges and questions for which clear and simple answers are not always provided by modern medicine. To date, only limited therapeutic options are available for patients with advanced cancer. The recent shift toward targeted therapies has improved substantially patient's survival, however, relapses are frequent and cure remains rare. This led patients and many health care managers to shift attention to the

holistic approach of traditional medicine particularly preparations from herbal products to manage and alleviate the disease. Typically, herbal preparations contain single or multiple plant ingredients, including a number of potential active components. Yet, they remain classified as food supplements and thus are exempt from regulations on quality control and proof of efficacy that govern standard pharmaceuticals. Clinical evidence for many preparations is often based on non-documented or anecdotal evidence. In consequence, several preparations with unproven efficacy are circulating in the market with the fear of interference with standard cancer therapies and/or severe toxicity that some can generate, in addition to the unjustified economical burden to patients. Despite inconsistent and conflicting clinical results single molecules have been isolated from herbal preparations and many are exploited to develop potential novel agents. This has fostered the need to organize a set of timely, in-depth and up-to-date review covering the latest developments in alternative cancer management from a scientific and clinical perspective dedicated to the medical community and health care providers, as well as to patients and their families. This book brings the latest comprehensive cancer information and practical recommendations on the best documented practice of alternative therapies for cancer management put together by recognized experts in the fields of medical oncology, traditional medicine, and cancer pharmacology. It goes hand-in-hand with the patient's medical treatment options, quality of life issues, and more. The book is organized into four major sections: The first is an overview of the cancer syndrome by renowned medical oncologists from the USA and Europe. The second is a comprehensive description of traditional medicine by renowned experts from China and Germany. The third is an overview on the pharmacological impact of herb-based formulations on standard chemotherapy agents used in clinical practice. The fourth is a survey of cases reports from several hospitals with approved practice of alternative medicine. The book will feature simple definitions and essential information grouped in both medical and lay-term terminology, and straightforward illustrations related to human physiology, disease definition, scientific data on know and potential mechanisms of action, and preventive approaches. Finally, the book will feature collaboration of experts from China, India, USA, Canada, Germany, France, and other centres with recognized expertise in alternative/traditional medicine. This international cooperation is crucial to cover the complex topic of alternative therapies for cancer.

'Principles of Animal Physiology' includes research on animal genetics and genomics, methods and models and offers a broad range of vertebrate and invertebrate examples, combining clear explanations and a comprehensive supplements package.

Introduction to Biostatistics (A Textbook of Biometry) S. Chand Publishing

Product Dimensions: 21x15x3 cm. 10 edition. Contents: CONTENTS: 1. Introduction 2. Cellular Basis of Development 3. DNA, RNA and Protein Synthesis 4. Male Gonads and Spermatogenesis 5. Female Gonads and Oogenesis 6. Semination, Ovulation and Transportation of Gametes 7. Reproductive Cycles . Fertilization 8. Parthenogenesis 9. Cleavage and Blastulation - Nucleus and Cytoplasm in Development 10. Fate Maps and Cell Lineage, Gastrulation, Neurulation, Morphogenesis and Growth 11. Embryogenesis of a Simple Ascidian - Embryogenesis of Amphioxus 12. Embryogenesis of Frog 13. Detailed Account of Organogenesis of Frog 14. Embryogenesis of Chick. 15. Early Embryogenesis of Eutherian Mammal 16. Rabbit Placenta and Placentation 17. Gradient Theory 18. Embryonic Inductions and Competence 19. Differentiation Asexual Reproduction and Blastogenesis 20. Regeneration 21. Metamorphosis 22. Teratogenesis 23. Birth Control 24. Impotency, Sterility, Artificial Insemination, Test-tube Baby and GIFT, Glossary 25. Selected Reading 26. Index.

Integrative Approaches and Discovery of Conventional Drugs Himalayan Academy Publications

Thoroughly revised to cater the needs of Graduate and Post Graduate students spanning various colleges and Universities nationwide. This fourth revised edition has the following latest features. > The textbook is written in a clear lucid manner to cover the theoretical, practical and applied aspect of biostatistics. > Well-labelled illustrations, diagrams, tables and adequate examples complement the text so that student may practice on their own. > Numerous examination oriented solved problems as well as number of topics viz set theory, Binomial Expansion, Permutation, Combination and Non-Parametric Statistics have been incorporated. > Theoretical Discussions as well as solution of problems have been represented in unambiguous language so as to clear to the needs of all students of Biosciences (Zoology, Botany, Physiology, Microbiology and Biotechnology etc.)

Indian Books in Print Cengage Learning

This textbook has been designed to meet the needs of B.Sc. First Semester students of Botany as per the UGC Choice Based Credit System (CBCS). It acquaints students with general characteristics, classification and economic importance of various divisions of biodiversity i.e., Microbes, Algae, Fungi and Archegoniate. While it provides strong conceptual understanding of the subject, it also helps in developing scientific outlook of the student.
