"It is no very easy matter for an author to condense his own work into so small a space as one-half or one-third of its original magnitude. ... I have considered it better to rearrange fragmentary portions of the original story into another form of narrative, ... I have presented only the direct adventures of Robin Hood and of certain important members of his band. I have given a couple of chapters relating to their quarrel with the Sheriff of Nottingham; I have introduced Robin Hood to the Court at London and have brought King Richard of the Lion's Heart into the Forest of Sherwood."-- Preface.

Although nearly everyone has heard the name of Robin Hood, few have actually read any medieval tales about the legendary outlaw. Stephen Knight and Thomas Ohlgren set out to correct this discrepancy in their comprehensive collection of all pre-seventeenth-century Robin Hood tales. The editors include such other "outlaw" figures as Hereward the Wake, Eustache the Monk, and Fouke le Fitz Waryn to further contextualize the tradition of English outlaw tales. In this text the figure of Robin Hood can be viewed in historical perspective, from the early accounts in the chronicles through the ballads, plays, and romances that grew around his fame and impressed him on our fictional and historical imaginations. This edition is particularly useful for classrooms, with its extensive introductions, notes, and glosses, enabling students of any level to approach the texts in their original Middle English.

One of the most stylized facts in labor economics is the finding that wages tend to rise with job duration but what is the role of productivity between this relation? Intuitively, it seems rather unspectacular that experienced workers' earnings are higher than otherwise comparable junior workers', but economic literature offers three competing theories explaining this phenomenon. A unique database from a single professional sports industry, covering the past decade of player performance and wages in the National Basketball Association (NBA) is used to test the superiority of one model over others in explaining players' upwards sloping age-earnings profiles. The empirical results show little evidence of the notion that player wages are solely determined on the basis of their productivity. Findings are rather in accordance with shirking and matching ideas: Returns to tenure are found to be significant but it's magnitude is reduced when the spurious bias - stemming from OLS - is controlled for. The fact that tenure remains considerably large - unaffected of productivity - but is simultaneously mitigated due to job match specific effects, is in harmony with incentive and matching arguments. Joachim Prinz, born 1971, studied economics at the University of Trier, Copenhagen Business School and American University, Washington D.C. From 1999-2001 he was a scientific co-worker at the University of Greifswald, Department of Economics. Since 2001 University of Witten/ Herdecke.
