In Part II, *Clinical Issues*, discussion covers the procedural steps of neuropsychological assessment, behavioral assessment techniques, observational data, and oral and written communication of results. These chapters are

followed in Part III, *Domains and Tests*, by extended coverage of topics and tests related to the major neuropsychological domains: intelligence, executive function, attention and processing speed, language, motor and sensory-perceptual function, visuoperceptual, visuospatial and visuoconstructional function, and learning and memory. A final chapter addresses deception in childhood, reasons why a child might reduce effort and invalidate assessment, and the use of performance validity tests, symptom validity tests, and embedded validity indicators to assess noncredible effort. Each of the 16 chapters includes definitions, theoretical concepts, models, and assessment techniques that are essential knowledge for clinical and research pediatric neuropsychologists.
