DORSEY SANTANA

Evil in Modern Thought

Routledge

These essays are by
scholars who have studied
with Benjamin Schwartz,
who taught at Harvard
from 1950-1987. Through

his teaching and writing,
he became a major force
in the field of Chinese
studies, setting standards-
-above all in the area of
intellectual history--that
have been a source of
inspiration to students
and scholars worldwide.
*An Introduction to Modern
Economic Thought* Read
Books Ltd

The Stoics, Dante, the
philosophers of the
Enlightenment, H.G.
Wells, world federalists,
would-be reformers of the
United Nations, and many
others have all thought,
albeit in very different
ways, in cosmopolitan or
world terms. This book
traces the history of
western political thinking

about world citizenship and the world state. It analyses the manifold forms in which the basic concept of a world polity has been expounded and shows that, despite objections to the very notion and its failure to be implemented, it still remains a potent ideal.

An Alternative History of Philosophy

Cambridge University Press

How the history of political thought relates to politics, history and culture of various nations.

The Wealth of Ideas

University of Chicago Press

This history of Russian thought was first published in Polish in 1973 and subsequently appeared 2005 in a revised and expanded publication. The current volume begins with Enlightenment thought and Westernization in Russia in the 17th century and moves to the religious-philosophical renaissance of first decade of the 20th century. This book provides readers with an

exhaustive account of relationships between various Russian thinkers with an examination of how those thinkers relate to a number of figures and trends in Western philosophy and in the broader history of ideas. [The Cambridge History of Moral Philosophy](#) Weidenfeld & Nicolson Two simple yet tremendously powerful ideas that shaped virtually every aspect of civilization This book is a breathtaking examination of the two greatest ideas in human history. The first

is the idea that the human mind can grasp the universe. The second is the idea that the human mind can grasp itself. Acclaimed philosopher Linda Zagzebski shows how the first unleashed a cultural awakening that swept across the world in the first millennium BCE, giving birth to philosophy, mathematics, science, and virtually all the major world religions. It dominated until the Renaissance, when the discovery of subjectivity profoundly transformed the arts and sciences.

This second great idea governed our perception of reality up until the dawn of the twenty-first century. Zagzebski explores how the interplay of the two ideas led to conflicts that have left us ambivalent about the relationship between the mind and the universe, and have given rise to a host of moral and political rifts over the deepest questions human beings face. Should we organize civil society around the ideal of living in harmony with the world or that of individual

autonomy? Zagzebski explains how the two greatest ideas continue to divide us today over issues such as abortion, the environment, free speech, and racial and gender identity. This panoramic book reveals what is missing in our conception of ourselves and the world, and imagines a not-too-distant future when a third great idea, the idea that human minds can grasp each other, will help us gain an idea of the whole of reality. *Masters of Sociological*

Thought Cambridge University Press
 Now in a special gift edition, and featuring a brand new foreword by Anthony Gottlieb, this is a dazzlingly unique exploration of the works of significant philosophers throughout the ages and a definitive must-have title that deserves a revered place on every bookshelf.

Modern European

Thought Penguin
 In this new text, Mark Mattern offers a unique alternative to the traditional approaches to the study and teaching of political philosophy. Rather than approaching it solely as a world of abstractions, *Putting Ideas to Work* emphasizes its practical task. Political ideas drawn from historical and analytical political philosophy are used to help rethink current public problems and imagine potential solutions to them.

Environmental Thought

Penguin
 A highly ambitious and lucid history of ideas from the very earliest times to the present day. In this hugely ambitious and exciting book Peter Watson tells the history of ideas from prehistory to the present day, leading to a new way of telling the history of the world. The book begins over a million years ago with a discussion of how the earliest ideas might have originated. Looking at animal behaviour that appears to require some thought: tool-making,

territoriality, counting, language (or at least sounds), pairbonding. Peter Watson moves on to the apeman and the development of simple ideas such as cooking, the earliest language, the emergence of family life. All the obvious areas are tackled: the Ancient Greeks, Christian theology, the ideas of Jesus, astrological thought, the soul, the self, beliefs about the heavens, the ideas of Islam, the Crusades, humanism, the Renaissance, Gutenberg and the book, the

scientific revolution, the age of discovery, Shakespeare, the idea of Revolution, the Romantic imagination, Darwin, imperialism, modernism, Freud right up to the present day and the internet. The Philosophy of History Routledge Ever since its first publication in 1992, The End of History and the Last Man has provoked controversy and debate. Francis Fukuyama's prescient analysis of religious fundamentalism, politics, scientific

progress, ethical codes, and war is as essential for a world fighting fundamentalist terrorists as it was for the end of the Cold War. Now updated with a new afterword, The End of History and the Last Man is a modern classic. **Ideas : a History of Thought and Invention, from Fire to Freud** Simon and Schuster Selected essays of arguably the greatest and most influential historian of ideas of modern times. Ideas Cambridge University Press

The National Book Award winning history of how racist ideas were created, spread, and deeply rooted in American society. Some Americans insist that we're living in a post-racial society. But racist thought is not just alive and well in America -- it is more sophisticated and more insidious than ever. And as award-winning historian Ibram X. Kendi argues, racist ideas have a long and lingering history, one in which nearly every great American thinker is complicit. In this deeply

researched and fast-moving narrative, Kendi chronicles the entire story of anti-black racist ideas and their staggering power over the course of American history. He uses the life stories of five major American intellectuals to drive this history: Puritan minister Cotton Mather, Thomas Jefferson, abolitionist William Lloyd Garrison, W.E.B. Du Bois, and legendary activist Angela Davis. As Kendi shows, racist ideas did not arise from ignorance or hatred. They were created to

justify and rationalize deeply entrenched discriminatory policies and the nation's racial inequities. In shedding light on this history, *Stamped from the Beginning* offers us the tools we need to expose racist thinking. In the process, he gives us reason to hope.
Big Ideas Simply Explained W. W. Norton & Company
 An original deep history of the internet that tells the story of the centuries-old utopian dreams behind it—and explains why they

have died today Many think of the internet as an unprecedented and overwhelmingly positive achievement of modern human technology. But is it? In *The Internet Is Not What You Think It Is*, Justin Smith offers an original deep history of the internet, from the ancient to the modern world—uncovering its surprising origins in nature and centuries-old dreams of radically improving human life by outsourcing thinking to machines and communicating across

vast distances. Yet, despite the internet’s continuing potential, Smith argues, the utopian hopes behind it have finally died today, killed by the harsh realities of social media, the global information economy, and the attention-destroying nature of networked technology. Ranging over centuries of the history and philosophy of science and technology, Smith shows how the “internet” has been with us much longer than we usually think. He draws fascinating connections

between internet user experience, artificial intelligence, the invention of the printing press, communication between trees, and the origins of computing in the machine-driven looms of the silk industry. At the same time, he reveals how the internet’s organic structure and development root it in the natural world in unexpected ways that challenge efforts to draw an easy line between technology and nature. Combining the sweep of intellectual history with

the incisiveness of philosophy, *The Internet Is Not What You Think It Is* cuts through our daily digital lives to give a clear-sighted picture of what the internet is, where it came from, and where it might be taking us in the coming decades. Harvard Univ Asia Center
The development of Western man's ideas about himself and his universe is the central concern of a study of European thinkers of the last four centuries

Essays on Chinese Thought in Honor of

Benjamin I. Schwartz
Farrar, Straus and Giroux
This 2005 book traces the history of economic thought from its prehistory to the present day.

History of Western Philosophy Cambridge University Press
The global financial crisis has drawn attention to the importance of understanding historical ideas and learning lessons from the past. However, it can sometimes be difficult to trace the connections between old ideas and modern day issues. This

textbook traces the evolution of economic ideas from the ancient to the modern world by examining the contributions of the most important scholars to some of the most important ideas in economics. *The History of Economic Ideas* surveys topics that are important for the understanding of contemporary economic issues, including the ethical foundations of modern economics; ideas regarding property rights; price theory; money and interest; public finance;

the theories of business cycles and economic growth; international trade; and issues related to population and resource use. The book's originality lies in its overall organization, which allows readers to explore the development of ideas on a specific topic in detail. Yet it is brief enough to use alongside the original writings on which it is based. Filled with student-friendly features including a series of "Did You Know" facts and end-of-chapter questions, this book is

engaging and provides invaluable reading for all students of the history of economic thought and economic issues. The Structure of Political Thought Princeton University Press "We vote Key ideas the year's best browse". -- Newsweek Key Ideas in Human Thought explains 2,500 of the most important terms and concepts that have shaped the modern world. Encompassing all fields of inquiry from science to history, this rich compendium is a valuable

tool for anyone. Economic Thought in Contemporary Context Bold Type Books "At once thoughtful and thought-provoking," Beloved Beasts tells the story of the modern conservation movement through the lives and ideas of the people who built it, making "a crucial addition to the literature of our troubled time" (Elizabeth Kolbert, author of *The Sixth Extinction*). In the late nineteenth century, humans came at long last to a devastating realization: their rapidly

industrializing and globalizing societies were driving scores of animal species to extinction. In *Beloved Beasts*, acclaimed science journalist Michelle Nijhuis traces the history of the movement to protect and conserve other forms of life. From early battles to save charismatic species such as the American bison and bald eagle to today's global effort to defend life on a larger scale, Nijhuis's "spirited and engaging" account documents "the changes of heart that changed

history" (Dan Cryer, *Boston Globe*). With "urgency, passion, and wit" (Michael Berry, *Christian Science Monitor*), she describes the vital role of scientists and activists such as Aldo Leopold and Rachel Carson, reveals the origins of vital organizations like the Audubon Society and the World Wildlife Fund, explores current efforts to protect species such as the whooping crane and the black rhinoceros, and confronts the darker side of modern conservation,

long shadowed by racism and colonialism. As the destruction of other species continues and the effects of climate change wreak havoc on our world, *Beloved Beasts* charts the ways conservation is becoming a movement for the protection of all species including our own. [Putting Ideas to Work](#) Princeton University Press Robin George Collingwood, FBA (1889 – 1943) was an English historian, philosopher, and archaeologist most famous his philosophical works. Along with "The

Principles of Art" (1938), Collingwood's "The Idea of History" was his best-known work, originally collated from numerous sources following his death by a student of his, T. M. Knox. It became a major inspiration for philosophy of history in the western world and is extensively cited to his day. This fascinating volume on history and its relationship to philosophy will appeal to students and collectors of vintage

philosophical works alike. Contents include: "The Philosophy of History", "History's Nature", "Object", "Method", "Greco-Roman Histography", "The Influence of Christianity", "The Threshold of Scientific History", "Scientific History", "England", "Germany", "France", "Italy", etc. Many vintage books such as this are increasingly scarce and expensive. It is with this in mind that we are republishing this

volume today in an affordable, high-quality, modern edition complete with a specially-commissioned new biography of the author. [The Philosophy Book](#) Springer
A reexamination of the major economic theories of the past two hundred years discusses how long-dead, famous economists such as Adam Smith and others would handle today's economic problems.
