"In this lexicon Tal Ilan collects all the information on names of Jews in Palestine and the people who bore them between 330 BCE, a date which marks the Hellenistic conquest of Palestine, and 200 CE, the date usually assigned to the close of the mishnaic period, and the early Roman Empire. Thereby she includes names from literary sources as well as

those found in epigraphic and papyrological documents. Tal Ilan discusses the provenance of the names and explains them etymologically, given the many possible sources of influence for the names at that time." "In addition she shows the division between the use of biblical names and the use of Greek and other foreign names. She analyzes the identity of the persons and the choice of name and points out the most popular names at the time. The lexicon is accompanied by a lengthy and comprehensive introduction that scrutinizes the main trends in name giving

current at the time." --Book Jacket.

Houben-Weyl is the acclaimed reference series for preparative methods in organic chemistry, in which all methods are organized according to the class of compound or functional group to be synthesized. The Houben-Weyl volumes contain 146 000 product-specific experimental procedures, 580 000 structures, and 700 000 references. The preparative significance of the methods for all classes of compounds is critically evaluated. The series includes data from as far back as the early 1800s to 2003. // The content of this e-book was originally published in .

This volume presents research and expository papers presented at the third and fifth meetings of the Council for African American Researchers in the Mathematical Sciences (CAARMS). The CAARMS is a group dedicated to organizing an annual conference that showcases the current research primarily, but not exclusively, of African Americans in the mathematical sciences, including mathematics, operations research,

statistics, and computer science. Held annually since 1995, significant numbers of researchers have presented their current work in hour-long technical presentations, and graduate students have presented their work in organized poster sessions. The events create an ideal forum for mentoring and networking where attendees can meet researchers and graduate students interested in the same fields. For volumes based on previous CAARMS proceedings, see *African Americans in Mathematics II* (Volume 252 in the AMS series, *Contemporary Mathematics*), and *African Americans in Mathematics* (Volume 34 in the AMS series, DIMACS).

Geodesy, which is the science of measuring the size and shape of the Earth, explores the theory, instrumentation and results from modern geodetic systems. The beginning sections of the volume cover the theory of the Earth's gravity field, the instrumentation for measuring the field, and its temporal variations. The measurements and results obtained from variations in the rotation of the Earth are covered in the sections on short and long period rotation changes. Space based geodetic methods, including the global positioning system (GPS) and Interferometric synthetic aperture radar (SAR), are also examined in detail. Self-contained volume starts with an overview of the subject then explores each topic with in depth detail Extensive reference lists and cross references with other volumes to facilitate further research Full-color figures and tables support the text and aid in understanding Content suited for both the expert and non-expert

Probability and Statistics theme is a component of Encyclopedia of Mathematical Sciences in the global Encyclopedia of Life Support Systems (EOLSS), which is an integrated compendium of twenty one Encyclopedias. The Theme with contributions from distinguished experts in the field, discusses Probability and Statistics. Probability is a standard mathematical concept to describe stochastic uncertainty. Probability and Statistics can be considered as the two sides of a coin. They consist of methods for modeling uncertainty and measuring real phenomena. Today many important

political, health, and economic decisions are based on statistics. This theme is structured in five main topics: Probability and Statistics; Probability Theory; Stochastic Processes and Random Fields; Probabilistic Models and Methods; Foundations of Statistics, which are then expanded into multiple subtopics, each as a chapter. These three volumes are aimed at the following five major target audiences: University and College students Educators, Professional practitioners, Research personnel and Policy analysts, managers, and decision makers and NGOs.

With an introduction by Olivia Laing

Monday 20 April 1925. One thing in considering my state of mind now, seems to me beyond dispute, that I have at last, bored down into my oil well, & can't scribble fast enough to bring it all to the surface... I have never felt this rush & urgency before. Mrs Dalloway (1925), To the Lighthouse (1927), Orlando (1928), A Room of One's Own (1929) - the years covered by this volume of Virginia Woolf's diary saw the publication of four of her

most celebrated works, and the writing of *The Waves*. Her diary captures the accelerating pace of her life, and the creative friendships with other well-known writers and artists. At times exhilarated, at others fearful or depressed, the entries of these years are animated by Woolf's sheer vitality as a writer.

In this lexicon, Tal Ilan collects all the information on names of Jews in lands west of Palestine, in which Greek and Latin was spoken, and on the people who bore them between 330 BCE, a date which marks the Hellenistic conquest of East, and 650 CE, approximately the date when the Muslim conquest of East and the southern Mediterranean basin was completed. The corpus includes names from literary sources, but those mentioned in epigraphic and papyrological documents form the vast majority of the database. This lexicon is an onomasticon in as far as it is a collection of all the recorded names used by the Jews of the western Diaspora in the above-mentioned period. Tal Ilan discusses the provenance of the names

and explains them etymologically, given the many possible sources of influence for the names at that time. In addition she shows the division between the use of biblical names and the use of Greek, Latin and other foreign names, and points out the most popular names. This book is also a prosopography since Ilan analyzes the identity of the persons mentioned therein. The lexicon is accompanied by a lengthy and comprehensive introduction that scrutinizes the main trends in name giving current at the time. A large part of it is devoted to the question of how one can identify a Jew in a mostly non-Jewish society.

"The whole thing was basically an experiment," Richard Feynman said late in his career, looking back on the origins of his lectures. The experiment turned out to be hugely successful, spawning publications that have remained definitive and introductory to physics for decades. Ranging from the basic principles of

Newtonian physics through such formidable theories as general relativity and quantum mechanics, Feynman's lectures stand as a monument of clear exposition and deep insight. Timeless and collectible, the lectures are essential reading, not just for students of physics but for anyone seeking an introduction to the field from the inimitable Feynman.
