GEORGE MALAKI

Torrent of Portyngale Harvard University Press
 The Indo-Europeans, speakers of the prehistoric parent language from which most European and some Asiatic languages are descended, most probably lived on the Eurasian steppes some five or six thousand years ago. Martin West investigates their traditional mythologies, religions, and poetries, and points to elements of common heritage. In *The East Face of Helicon* (1997), West showed the extent to which Homeric and other early Greek poetry was influenced by Near Eastern traditions, mainly non-Indo-European. His new book presents a foil to that work by identifying elements of more ancient, Indo-European heritage in the Greek material. Topics covered include the status of poets and poetry in Indo-European societies; metre, style, and diction; gods and other supernatural beings, from Father Sky and Mother Earth to the Sun-god and his beautiful daughter, the Thunder-god and other elemental deities, and earthly orders such as Nymphs and Elves; the forms of hymns, prayers, and incantations;

conceptions about the world, its origin, mankind, death, and fate; the ideology of fame and of immortalization through poetry; the typology of the king and the hero; the hero as warrior, and the conventions of battle narrative.

The Land of Heroes Greenwood

Looks at the Supercontinent Cycle; explores the history of its discovery; and includes discussion of Pangaea, the fusing of all of Earth's landmasses, and the lesser-known Rodinia, which existed approximately one thousand million years ago.

This publication presents estimates and projections for the period

1950-2030, of the size and growth of urban and rural populations of the world; for its 21 regions, five major areas and 228 countries. It also provides population estimates and projections for all urban agglomerations with at least 750,000 inhabitants in 1995 for the period 1950-2015. The report contains: an analysis of the prospects of urbanization and city growth in the world, a description of the methodology used for estimations and projections; and a list of the data sources that underlie the urban population estimates. Key findings include: the world's urban population is estimated to have reached 2.9 billion in 2000, and is expected to rise to 4.9 billion by 2030. By mid-2000, 47% of the world's 6.1 billion inhabitants lived in urban areas, and that proportion is expected to reach 60% by 2030. The most populous urban agglomeration is that of Tokyo with 26.4 million inhabitants, followed by Mexico City and Bombay which both have 18.1 million inhabitants.

Simon Critchley's Very Short Introduction shows that Continental philosophy encompasses a distinct set of philosophical traditions and practices, with a compelling range of problems all too often ignored by the analytic tradition. He discusses the ideas and approaches of philosophers such as Kant, Hegel, Nietzsche, Husserl, Heidegger, Sartre, Habermas, Foucault, and Derrida, and introduces key concepts such as existentialism, nihilism, and phenomenology by explaining their place in the Continental tradition. ABOUT THE SERIES: The Very Short Introductions series from Oxford University Press contains hundreds of titles in almost every subject area. These pocket-sized books are the perfect way to get ahead in a new subject quickly. Our expert authors combine facts, analysis, perspective, new ideas, and enthusiasm to make interesting and challenging topics highly readable.

Continental Philosophy: A Very Short Introduction The Republic of India The Development of Its Laws and Constitution The Origin of Continents and Oceans

Timaeus Plato - The dialogue takes place the day after Socrates described his ideal state. In Plato's works such a discussion occurs in the Republic. Socrates feels that his description of the ideal state wasn't sufficient for the purposes of entertainment and that "I would be glad to hear some account of it engaging in transactions with other states" (19b). Hermocrates wishes to oblige Socrates and mentions that Critias knows just the account (20b) to do so. Critias proceeds to tell the story of Solon's journey to Egypt where he hears the story of Atlantis, and how Athens used to be an ideal state that subsequently waged war against Atlantis (25a). Critias believes that he is getting ahead of himself, and mentions that Timaeus will tell part of the account from the origin of the universe to man.

Best Books of 2014 New Zealand Listener Imagine a typical continent with seemingly endless land in all directions. There are broad valleys and uplands, wide-open vistas across undulating plains, and upstanding mountain ranges far in the distance. There may be prominent features that command attention and draw the eye, such as odd-shaped hills, peaks, pinnacles, mesas and volcanoes. And there may be canyons, valleys, gorges, large depressions and basins. Now imagine this same continent under the sea, and largely drowned. Welcome to Zealandia. Continents are some of Planet Earth's most striking geographic and geological features. To have a continental identity is to be important, significant, recognised. This book makes a compelling claim for Zealandia to take its place alongside Eurasia, Africa, North America, South America, Australia and Antarctica.

Zealandia is a continent almost entirely submerged. With New Zealand as its largest inhabited land mass, it stretches north to incorporate New Caledonia, south beyond Auckland and Campbell islands, west beyond Australia's Lord Howe Island and east past the Chathams. Its ancestry reaches back more than half a billion years - a long, complex and dramatic story of growth, stretching, break-up, submergence, immersion and collision. The story of its cargo of plant and animal life is also one of change - of extinction, adaption and migration. A big book full of big ideas, and brought to you by renowned GNS scientists Hamish Campbell (co-author of *In Search of Ancient New Zealand*) and Nick Mortimer, *Zealandia: Our Continent Revealed* is in every respect a landmark publication - thought-provoking, visually stunning and eminently readable. 'I couldn't resist this superbly illustrated and persuasively written voyage through the distant past. It's fascinating stuff that will undoubtedly generate considerable debate.' - Christopher Moore, *New Zealand Listener*

The Bermuda Triangle Edward Elgar Publishing

The 1999 Revision Houghton Mifflin Harcourt

The book reveals, for the first time, the origins, growth and complex role of the OECD as it celebrates its fiftieth anniversary, showing how it has adapted for the most part successfully to the changing needs of its members, both large and small. Peter Carroll and Aynsley Kellow provide a comprehensive account and analysis of the origins, development and, most intriguingly, the recent reforms that characterise the OECD. They argue that this increasingly complex organisation has fulfilled its design to be an adaptive, learning organisation and explore how the OECD has spread its wings beyond its European and North American roots to become an increasingly influential body in global governance. Topical chapters include the OECD's work on health and the environment, relations with international, intergovernmental organisations, the OECD's structure and also the key processes. This fascinating book will be warmly welcomed by academics,

researchers and postgraduate students in a wide range of fields including international relations, international business, political science, public policy and public administration. Public servants in national departments and agencies particularly those with significant international activities will also find the book to be of great interest, as will professionals within international organisations such as IMF, World Bank, EU, UN and (of course) the OECD itself.
