The critical analysis of science textbooks is vital in improving teaching and learning at all levels in the subject, and this volume sets out a range of academic perspectives on how that analysis should be done. Each chapter focuses on an aspect of science textbook appraisal, with coverage of everything from theoretical and philosophical underpinnings, methodological issues, and conceptual frameworks for critical analysis, to practical techniques for evaluation. Contributions from many of the most distinguished scholars in the field give this collection its sure-footed contemporary relevance, reflecting the international standards of UNESCO as well as leading research organizations such as the American Association for the Advancement of Science (whose Project 2061 is an influential waypoint in developing protocols for textbook analysis). Thus the book shows how to gauge aspects of textbooks such as their treatment of controversial issues, graphical depictions, scientific historiography, vocabulary usage, accuracy, and readability. The content also covers broader social themes such as the portrayal of women and minorities. "Despite newer, more active pedagogies, textbooks continue to have a strong presence in classrooms and to embody students' socio-historical inheritance in science. Despite their ubiquitous presence, they have received relatively little on-going empirical study. It is imperative that we understand how textbooks influence science learning. This book presents a welcome and much needed analysis." Tina A. Grotzer Harvard University, Cambridge, Massachusetts, USA The present book provides a much needed survey of the current state of research into science textbooks, and offers a wide range of perspectives to inform the 'science' of writing better science textbooks. This study examines the use of prefabricated language (conventional lexical collocations) in the

production of native and non-native writers of English. It first develops a framework for the description of restricted collocations and then reviews experimental research into the psycholinguistic processing of prefabricated language. Computer-based corpora of native and advanced non-native academic writing are analysed to discover to what extent and how such collocations are used in formal written English. Pedagogical implications are then considered, and the final part of the study examines the selection and presentation of restricted collocations in general and phraseological dictionaries for learners. The conclusion suggests that advanced learners need specialist collocational dictionaries, and the results of this research help to establish principles for the design of such dictionaries.

"In second grade, children move from a "little-kid" focus on print to a "big-kid" focus on meaning. The first unit, Second-Grade Reading Growth Spurt, teaches children to take charge of their reading, drawing on everything they know to figure out hard words, understand author's craft, and build big ideas about the books they read. Children learn that books can be their teachers in the second unit, Becoming Experts: Reading Nonfiction, in which they learn more about familiar topics and grow understanding of new topics while working on word solving, vocabulary development, and comparing and contrasting information across texts. In the third unit, Bigger Books Mean Amping Up Reading Power, children learn strategies to build three foundational reading skills--fluency, understanding figurative language, and comprehension. In the final unit for second grade, Series Book Clubs, children work within book clubs to study author's craft to understand ways authors use word choice, figurative language, punctuation, and even patterns to construct a series and evoke feelings in readers"--Pearson.com.

In this new edition there is a new chapter on teaching vocabulary, a section on discovery techniques, more on task-based learning and learner training, and a recognition of the change of perception about what communicative competence might be. Many of the categories of

communicative activities have been rearranged and there is a more detailed account of teacher roles, together with a section on the use of the mother tongue. The sample lesson plan has been

changed and the many examples from textbooks generally reflect the materials now in use rather than those which were current when the first edition came out.
