This book features the second volume of the proceedings of the 9th International Conference of the International Association of Cultural and Digital Tourism (IACuDIT). Held at the Syros Island in Greece in September 2022, the conference's lead theme was 'Tourism, Travel, and Hospitality in a Smart and Sustainable

World'. With a full appreciation of the contributions made by numerous writers toward the progress in tourism research, this book presents a critical academic discourse on sustainable practices in a smart tourism context, stimulating future debates and advancing knowledge and understanding in this critical area of knowledge. It also puts emphasis on the knowledge economy and

smart destinations notion. It enacts new modes of tourism management and development and presents chapters on cultural heritage tourism, emerging technologies and tourism consumer behaviour, such as tourism education, location-based services, Internet of Things, smart cities, mobile services, gamification, digital collections and the virtual

visitor, social media, social networking, and augmented reality. Government Reports Announcements & Index Birkhäuser Soft computing is a branch of computer science that deals with a family of methods that imitate human intelligence. This is done with the goal of creating tools that will contain some human-like capabilities (such as learning, reasoning and decision-

making). This book covers the entire gamut of soft computing, including fuzzy logic, rough sets, artificial neural networks, and various evolutionary algorithms. It offers a learner-centric approach where each new concept is introduced with carefully designed examples/instances to train the learner. *Objektorientierte Analyse und Design von Kopf bis Fuß* Springer-Verlag Fundamental

Culture and Tourism in a Smart, Globalized, and Sustainable World

O'Reilly Media
The conference on "Interdisciplinary Research in Technology and Management" was a bold experiment in deviating from the traditional approach of

conferences which focus on a specific topic or theme. By attempting to bring diverse inter-related topics on a common platform, the conference has sought to answer a long felt need and give a fillip to interdisciplinary research not only within the technology domain but across domains in the management field as well. The spectrum of topics covered in the research papers is too wide to be

singled out for specific mention but it is noteworthy that these papers addressed many important and relevant concerns of the day. Lineare Programmierung und Erweiterungen Laxmi Publications Data science, data engineering and knowledge engineering requires networking and communication as a backbone and have wide scope of

implementation in engineering sciences. Keeping this ideology in preference, this book includes the insights that reflect the advances in these fields from upcoming researchers and leading academicians across the globe. It contains high-quality peer-reviewed papers of 'International Conference on Recent Advancement in Computer, Communication and Computational

Sciences (ICRACCCS 2016)', held at Janardan Rai Nagar Rajasthan Vidyapeeth University, Udaipur, India, during 25-26 November 2016. The volume covers variety of topics such as Advanced Communication Networks, Artificial Intelligence and Evolutionary Algorithms, Advanced Software Engineering and Cloud Computing, Image Processing and Computer Vision, and Security. The book will help the perspective readers from computer industry and academia to derive the advances of next generation communication and computational technology and shape them into real life applications. *Einführung in die Automatentheorie, formale Sprachen und Komplexitätstheorie*. dpunkt.verlag This book contains the refereed proceedings of the 13th International Conference on Business Information Systems, BIS 2010, held in Berlin, Germany, in May 2010. The 25 revised full papers were carefully reviewed and selected from more than 80 submissions. Following the theme of the conference "Future Internet Business Services", the contributions detail recent research results and experiences and were grouped in eight sections

on search and knowledge sharing, data and information security, Web experience modeling, business processes and rules, services and repositories, data mining for processes, visualization in business process management, and enterprise resource planning and supply chain management.

Springer Nature Data Structures Using C++ is designed to serve as a textbook for undergraduate engineering students of computer science and information technology as well as postgraduate students of computer applications. The book aims to provide a comprehensive coverage of all the topics related to data structures. The book begins with a discussion on the fundamentals of data structures and algorithms, and moves on to the concepts of linear data structures, stacks, recursion, queues, and searching and sorting. All the elements of data structures, such as linked lists, trees, graphs, hashing, heaps, and indexing, are covered in separate chapters in detail. The chapter on files explains file management and organization using C++ and the chapter on the standard template library provides detailed coverage of entities such as containers and iterators. A chapter on algorithm analysis and design is provided towards the end that discusses the various algorithmic strategies required to solve a problem effectively and efficiently. Written in a simple manner with
