Information on the parasites of Canadian fishes published between the years 1978 and 1993, inclusive, is assembled as Parasite-Host and Host-Parasite lists. The 925 named species of parasites are reported on 292 species of Canadian fishes. The Parasite-Host list is organized on a taxonomic basis and identifies for each species its habitat (freshwater, marine, or brackish), site of occurrence in its host(s), species host(s), known geographic distribution within Canadian waters, and the published source for each host and locality record. The Host-Parasite list is organized according to the taxonomy of the hosts and is accompanied by data on the known Canadian distribution of the parasites. For

both the Parasite-Host and Host-Parasite lists, a "Remarks" section containing explanatory comments concerning systematics, nomenclature, and notes on other specific items is included as warranted. In addition to listing the cited references, as supplementary list of references is included to cover other Canadian literature on fish parasites.

The St. Marys River is a former strait which connects Lakes Superior and Huron. The most northern of the Great Lakes connecting channels, it originates from Whitefish Bay in Lake Superior between Point Iroquois, Michigan, and Gros Cap, Ontario. It flows in a southeasterly direction approximately 112 km before emptying into Lake Huron at De Tour, Michigan (Figure 1). The river falls about 6.7 m between its headwaters and mouth; however, 6.1 m of this drop in elevation occurs at the St. Marys Rapids, 23 km below the headwaters. The river is bounded on the south and west by the Upper Peninsula of Michigan: on the north and northeast by the Ontario mainland; and on the east, first by St. Joseph Island, Ontario, and then by Drummond Island, Michigan, which forms the most southerly border. The surficial geology of the southwestern St. Marys River Valley is primarily lacustrine sediments and moraines (Figure 3). On the southwestern edge of the valley in Michigan, level lakebed plains are interrupted by gently rolling plateaus, low rounded ridges, or lakeshore features such as remnant beach ridges, sand dunes, bluffs, or marshland (Veatch et al . 1927) . In Ontario, on the northeastern edge of the valley, knobby Precambrian rock is partially covered by a thin layer of till or lacustrine clay (McCuthcheon 1968). Numerous lakes also dot the Precambrian shield area north of the river. Mineral soils in the vicinity of the river are comprised of clays, loams, or sands (Table 1). These soils, in general, are highly retentive of water as are the organic soils common west and south of Munuscong Lake.

This book examines the two major parasite groups that are transmitted via water or foods: the single-celled protozoa, and the helminths: cestodes (tapeworms), nematodes (round worms), and trematodes (flukes). Each chapter covers the biology, mechanisms of pathogenesis, epidemiology, treatment, and inactivation of these parasites. This important new text offers a better understanding of the biology and control of parasitic infections necessary to reduce or eliminate future outbreaks in the U.S. and elsewhere.

The Bad Bug Book 2nd Edition, released in 2012, provides current information about the major known agents that cause foodborne illness. Each chapter in this book is about a pathogen—a bacterium, virus, or parasite—or a natural toxin that can contaminate food and cause illness. The book contains scientific and technical information about the major pathogens that cause these kinds of illnesses. A separate “consumer box” in each chapter provides non-technical information, in everyday language. The boxes describe plainly what can make you sick and, more important, how to prevent it. The information provided in this handbook is abbreviated and general in nature, and is intended for practical use. It is not intended to be a comprehensive scientific or clinical reference. The Bad Bug Book is published by the Center for Food Safety and Applied Nutrition (CFSAN) of the Food and Drug Administration (FDA), U.S. Department of Health and Human Services.
