The book describes the complex and
variable laws addressing site
contamination, reviewing existing
international, regional and national law
of relevance to site contamination. It
also offers detailed case studies of

national approaches to the issue, and
goes on to explore avenues for
promoting the development of
comprehensive domestic laws on site
contamination, with a focus on the role
of international law and actors. A
detailed discussion analyzes such
variations as a binding international
legal instrument, a non-binding
instrument, and a model framework for
site contamination management. The
text includes recommendations
regarding the key elements needed for

regulating site contamination at the national level. The author also offers an appropriate and feasible timetable for international action to promote better national law and policy regarding contaminated sites.
