*The Karmic Car Cycles* Motorbooks  
CNN chief medical correspondent Sanjay Gupta, MD, offers an accessible, data-packed answer to our biggest questions about Covid-19: What have we learned about this pandemic and how can we prepare for—or prevent—the next one? As America's favorite frontline Covid-19 health journalist, Dr. Sanjay Gupta has

barely left his primetime seat in his makeshift studio basement since the pandemic began (other than to perform brain surgery). He's had insider access to the drama's unfolding, including exclusive conversations with the world's top public health experts and behind-the-scenes scientists racing to find treatments and cures. And now he's sharing what he's learned in a book that will answer not only all our questions about what happened, but also about how our world will change in the years

ahead, even once we're back to "normal." Gupta argues that we need to prepare for a new era where pandemics will be more frequent, and possibly even more deadly. As the doctor who's been holding America's hand through the crisis with compassion, clarity, and well-earned wisdom, he gives you the unvarnished story behind the pandemic, including insights about the novel virus's behavior, and offers practical tools to ready ourselves for what lies ahead. He answers critical questions: Can we stamp out the virus for good (and if not, how do we live with it)? Should we put our parents in a nursing home? Where should we live? What should we stockpile? What should we know before taking a trip? Does it make sense to spend more on health insurance to deal

with any long-term effects? How do you decide when it's safe to go to a public pool or schedule elective surgery? What should Covid survivors know about protecting their future health? What if you become a long-hauler with chronic health challenges stemming? World War C will give you hope for the future along with real information that leaves you more resilient and secure.

Donovan is the new guy in town, a polar shifter, harboring a big secret. He's a big city bear who moved to the tiny town of Forgotten, Wyoming, in hopes of finding peace. What he finds is poison ivy and angry wasps. TJ, a grizzly shifter, is the local doctor with a past. He's found a home in the country, but lacks happiness

and a sense of belonging. The fact that he's in the midst of his natural mating season doesn't help in the least. The moment Donovan enters TJ's clinic, sparks fly. TJ is determined to resist the temptation that is Donovan, but his inner bear and Donovan have other ideas. When a hunter starts going after shifters and a blast from Donovan's past show up for revenge, things get hot. But not as hot as the attraction between Donovan and TJ. If they can pull together and survive, they just might discover that, while they might be polar opposites, sometimes opposites do attract.

This comprehensive collection examines the culture of sport and its relationship with various social institutions. The editors first provide a broad overview of the field and describe the ways in which the concept of sport as a meritocratic contest is undermined by the powerful social structures within which it is embedded. Sections focus on political economy, violence, the media, education, politics, fans and community, and the body. Primary readings from noted scholars in each section address

current issues such as the presence of big-time sports in educational institutions; the effects of corporate media; race and class relations; professional athletes' ties to politics; and how sports alter perceptions and practices regarding beauty and health. In addition, entertaining and provocative essays from journalists supplement academic readings and spotlight key issues. Section introductions from the editors connect the readings to a theoretical framework that explores the perspectives of new institutionalism, cultural hegemony, social capital, and symbolic interaction and cultural construction. Providing a cohesive foundation for a wide range of readings, *Sport, Power, and Society* is a must-have resource for understanding the current

issues and debates surrounding the interactions of sport and society.

A look deep inside the new Silicon Valley, from the New York Times bestselling author of *The Everything Store*. Ten years ago, the idea of getting into a stranger's car, or a walking into a stranger's home, would have seemed bizarre and dangerous, but today it's as common as ordering a book online. Uber and Airbnb have ushered in a new era: redefining neighborhoods, challenging the way governments regulate business, and changing the way we travel. In the spirit of iconic Silicon Valley renegades like Steve Jobs and Bill Gates, another generation of entrepreneurs is using technology to upend convention and

disrupt entire industries. These are the upstarts, idiosyncratic founders with limitless drive and an abundance of self-confidence. Led by such visionaries as Travis Kalanick of Uber and Brian Chesky of Airbnb, they are rewriting the rules of business and often sidestepping serious ethical and legal obstacles in the process. The Upstarts is the definitive story of two new titans of business and a dawning age of tenacity, conflict and wealth. In Brad Stone's riveting account of the most radical companies of the new Silicon Valley, we discover how it all happened and what it took to change the world.

**International Conference on All-Wheel Drive** Piggyback Interactive Ltd. A Short History of Transport in Japan from Ancient Times to the Present is a

unique study: the first by a Western scholar to place the long-term development of Japanese infrastructure alongside an analysis of its evolving political economy. Drawing from New Institutional Economics, Black offers a historically informed critique of contemporary planning using the example of Japan's historical institutions, their particular biases, and the power they have exerted over national and local transport, to identify how reformed institutional arrangements might develop more sustainable and equitable transport services. With chapters addressing each major form of transport, Black examines the predominant role of institutions and individuals – from seventeenth-century shoguns to post-war planners – in transforming Japan's

maritime infrastructure, its roads and waterways, and its adoption of rail and air transport. Using a multidisciplinary, comparative, and chronological approach, the book consults a range of technical, cultural, and political sources to tease out these interactions between society and technology. This spirited new contribution to transport studies will attract readers interested in institutional power, the history of transport, and the development of future infrastructure, as well as those with a general interest in Japan.

Addiction to cell phones has made distracted driving a national epidemic. State patrol officers who deal with crashes every day see the phone as the new "open bottle" in the car that makes

drivers impaired and dangerous. Add phones and other devices to the many types of distraction we already face--from tuning the radio to drinking coffee behind the wheel--and we have a crisis. But this crisis can be totally avoided if drivers make the right choice, the safe choice. One Split Second can help drivers make that best choice. This book is a one-of-a-kind resource that brings together real-life stories, facts and figures, fascinating research about our behavior behind the wheel, and expert perspectives on how we can end the distraction epidemic. It is a book no driver can live without.

Porsche AG, today the most profitable car company in the world, was in 1975 a small but headstrong German automaker on the verge of its most significant development. New national laws were changing the way manufacturers designed their products, but the auto consumer was also craving more exciting and innovative design. That innovation came in 1975 with the release of the revolutionary Porsche 924. This book begins its analysis with the creation of the Porsche 924 and the

impact it made on the automotive world. During the 1980s, Porsche honed earlier 924 designs to create the 944 and its Turbo and convertible variants, and later the 968, completing a line that has produced some of the most respected sports cars of the modern era. The text also follows in detail the long production life and development of Porsche's V-8 powered high performance grand tourer, the 928—introduced in 1977, named the 1978 European Car of the Year and culminating in the 350 bhp 928 GTS of the 1990s. This history of the dynamic Porsche family gives a full account of each model and reveals the unique contributions each has made to a constantly evolving automotive world.

An MI6 officer's account of a heart-pounding mission to rescue a spy trapped in Russia, "as exciting as anything found in fiction" (Daily Mail). Paul Dukes, a thirty-year-old concert pianist, was a master of disguise—dubbed 'The Man with a Hundred Faces'—and an English spy in Russia. As the First World War was drawing to a close, and as the revolutionaries sought to consolidate their newfound power, Dukes was cut off in Petrograd after infiltrating the Bolshevik Government and stealing top-secret information. With the government in London desperately in need of the documents in Dukes's possession, and the Bolshevik secret police closing in, a seemingly suicidal plan was hatched to rescue him. Young naval lieutenant Gus

Agar and his handpicked team of seven men boarded plywood boats—the fastest naval vessels in existence, most armed with only two machine guns and a single torpedo. They set out for the island fortress of Kronstadt, the most well-defended naval target in Russia—and into the jaws of the Soviet police. Written by a former MI6 officer, *Operation Kronstadt* tells the full story, making for an extraordinarily gripping nonfiction thriller.

On November 24, 1968, more than 250

people from 19 nations set off on a 10,000-mile endurance rally from London to Sydney. Crossing 10 countries, competitors encountered officious border guards, gangs of rock-throwing children, treacherous driving conditions, collisions, breakdowns, injuries, wayward dogs, livestock, camels and kangaroos, millions of spectators crowding the roads and even bandits. Among the professional drivers were a large number of enthusiastic amateurs, many of whom had never raced in their lives. Drawing from personal recollections of more than 60 participants—many who made it to Sydney and many more who didn't—and contemporary newspaper and magazine articles, this book tells the full story of what was called the “Marathon,” from an

idea dreamed up over an alcohol-fueled lunch to the last car over the finish line. Mobility and Locative Media ABRAMS Mobilities has become an important framework to understand and analyze contemporary social, spatial, economic and political practices. Especially as mobile media become seamlessly integrated into transportation networks, navigating urban spaces, and connecting with social networks while on the move, researchers need new approaches and methods to bring together mobilities with mobile communication and locative media. Mobile communication scholars have focused on cell phones, often ignoring broader connections to urban spaces, geography, and locational media. As a result, they emphasized virtual mobility and personalized

communication as a way of disconnecting from place, location and publics. The growing pervasiveness of location-aware technology urges us to rethink the intersection among location, mobile technologies and mobility. Few studies have addressed the many transformations taking place in mobile sociality and in urban spatial processes through the appropriation of these technologies.
